<b>Description:</b>	Sets the reference serial number for the Control Unit. Using this parameter, if a Control Unit and/or a memory card is replaced at the end customer, the OEM can again adapt the project to the modified hardware.		
<b>Dependency:</b>	Refer to: p7765, p7766, p7767, p7768		
<b>Note:</b>	KHP: Know-How Protection - The OEM may only change this parameter for the use case "Sending encrypted SINAMICS data". - SINAMICS only evaluates this parameter when powering up from the encrypted "Load into file system..." output or when powering up from the encrypted PS files. The evaluation is only made when know-how protection and memory card copy protection have been activated.		

<b>r7760</b>	<b>Write protection/know-how protection status / Wr_prot/KHP stat</b>				
All objects	<b>Can be changed:</b> -	<b>Calculated:</b> -		<b>Access level:</b> 3	
	<b>Data type:</b> Unsigned16	<b>Dynamic index:</b> -		<b>Func. diagram:</b> -	
	<b>P-Group:</b> -	<b>Units group:</b> -		<b>Unit selection:</b> -	
	<b>Not for motor type:</b> -	<b>Scaling:</b> -		<b>Expert list:</b> 1	
	<b>Min</b>	<b>Max</b>		<b>Factory setting</b>	
	-	-		-	
<b>Description:</b>	Displays the status for the write protection and know-how protection.				
<b>Bit field:</b>	<b>Bit</b>	<b>Signal name</b>	<b>1 signal</b>	<b>0 signal</b>	<b>FP</b>
	00	Write protection active	Yes	No	-
	01	Know-how protection active	Yes	No	-
	02	Know-how protection temporarily withdrawn	Yes	No	-
	03	Know-how protection cannot be deactivated	Yes	No	-
	04	Memory card copy protection active	Yes	No	-
<b>Dependency:</b>	Refer to: p7761, p7765, p7766, p7767, p7768				
<b>Notice:</b>	For bits 01 ... 04, the following applies: For SIMOTION D410-2 these bits have no significance (they are always 0).				
<b>Note:</b>	KHP: Know-How Protection Re bit 00: Write protection can be activated/deactivated via p7761 on the Control Unit. Re bit 01: The know-how protection can be activated by entering a password (p7766 ... p7768). Re bit 02: If it has already been activated, know-how protection can be temporarily deactivated by entering the valid password in p7766. In this case, bit 1 = 0 and bit 2 = 1 offset. Re bit 03: Know-how protection cannot be deactivated, as p7766 is not entered in the OEM exception list (only the factory setting is possible). This bit is only set if know-how protection is active (bit 1 = 1) and p7766 has not been entered in the OEM exception list. Re bit 04: When know-how protection has been activated, the contents of the memory card (parameter and DCC data) can be additionally protected against being used with other memory cards. This bit is only set if know-how protection is active and p7765 = 1.

**Notice:** For SIMOTION D410-2, this parameter has no significance.

**Note:** KHP: Know-How Protection  
Even if know-how protection is set, parameters in this list can be read and written to.

<b>p7765</b>	<b>KHP memory card copy protection / KHP copy protect</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T <b>Data type:</b> Integer16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0
<b>Description:</b>	Setting for activating/de-activating copy protection for the memory card. This means that the OEM can define whether the parameters and DCC data encrypted on the memory card should be protected before using on other memory cards.		
<b>Value:</b>	0: Deactivating protection 1: Activating protection		
<b>Dependency:</b>	Refer to: p7766, p7767, p7768		
<b>Note:</b>	KHP: Know-How Protection The memory card copy protection is only effective when the know-how protection has been activated.		

<b>p7766[0...29]</b>	<b>KHP password input / KHP passw input</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T <b>Data type:</b> Unsigned16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -
<b>Description:</b>	Sets the password for know-how protection. Example of a password: 123aBc = 49 50 51 97 66 99 dec (ASCII characters) [0] = character 1 (e.g. 49 dec) [1] = character 2 (e.g. 50 dec) ... [5] = character 6 (e.g. 99 dec) [29] = 0 dec (completes the entry)		
<b>Dependency:</b>	Refer to: p7767, p7768		
<b>Notice:</b>	An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual. When using the STARTER commissioning software, the password should be entered using the associated dialogs.		
<b>Note:</b>	KHP: Know-How Protection When reading, p7766[0...29] = 42 dec (ASCII character = "") is displayed. When using the STARTER commissioning software, when reading via the expert list, p7766[0...29] is displayed with "*****". The following rules apply when entering the password: - Password entry must start with p7766[0]. - No gaps are permissible in the password. - Entering a password is completed when writing to p7766[29] (p7766[29] = 0 for passwords less than 30 characters).		

<b>p7767[0...29]</b>	<b>KHP password new / KHP passw new</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T <b>Data type:</b> Unsigned16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -
<b>Description:</b>	Sets the new password for know-how protection.		
<b>Dependency:</b>	Refer to: p7766, p7768		
<b>Note:</b>	KHP: Know-How Protection When reading, p7767[0...29] = 42 dec (ASCII character = "**") is displayed.		
<b>p7768[0...29]</b>	<b>KHP password confirmation / KHP passw confirm</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T <b>Data type:</b> Unsigned16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -
<b>Description:</b>	Confirms the new password for know-how protection.		
<b>Dependency:</b>	Refer to: p7766, p7767		
<b>Note:</b>	KHP: Know-How Protection When reading, p7768[0...29] = 42 dec (ASCII character = "**") is displayed.		
<b>p7769[0...20]</b>	<b>KHP memory card reference serial number / KHP mem ref ser_no</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> T <b>Data type:</b> Unsigned8 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -
<b>Description:</b>	Sets the reference serial number for the memory card. Using this parameter, if a Control Unit and/or a memory card is replaced at the end customer, the OEM can again adapt the project to the modified hardware.		
<b>Dependency:</b>	Refer to: p7765, p7766, p7767, p7768		
<b>Note:</b>	KHP: Know-How Protection - The OEM may only change this parameter for the use case "Sending encrypted SINAMICS data". - SINAMICS only evaluates this parameter when powering up from the encrypted "Load into file system..." output or when powering up from the encrypted PS files. The evaluation is only made when know-how protection and memory card copy protection have been activated.		
<b>p7770</b>	<b>NVRAM action / NVRAM action</b>		
B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G	<b>Can be changed:</b> T <b>Data type:</b> Integer16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 3	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0
<b>Description:</b>	Sets the action to be executed for NVRAM data. At the end of the action the value is automatically set to 0.		

<b>Value:</b>	0: Inactive 1: Load NVRAM data to parameters 2: Load parameters to NVRAM 3: Reset
<b>Notice:</b>	After action p7770 = 1 no more pulses may be enabled. After action p7770 = 2, it is essential that parameters are backed up (p0977 = 1) and that a warm restart is then performed (p0009 = 30, p0976 = 2, 3). This will apply the values written.
<b>Note:</b>	If value = 1: This action loads the NVRAM data to the parameters. If value = 2: This action loads the parameters to the NVRAM. If value = 3: This action sets parameters p7771 ... p7774 to the factory setting. It is recommended to avoid placing unnecessary load on the subsequent upload/download operation.

<b>p7775</b>	<b>NVRAM data backup/import/delete / NVRAM backup</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> C1, T <b>Data type:</b> Integer16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 17	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0
<b>Description:</b>	Setting to backup/import/delete NVRAM data. NVRAM data are non-volatile data in the device (e.g. fault buffer). For NVRAM data actions, the following data are excluded: - Crash diagnostics - CU operating hours counter - CU temperature - Safety logbook		
<b>Value:</b>	0: Inactive 1: NVRAM data backup to memory card 2: Import NVRAM data from the memory card 3: Delete NVRAM data in the device 10: Error when clearing 11: Error when backing up, memory card not available 12: Error when backing up, insufficient memory space 13: Error when backing up 14: Error when importing, memory card not available 15: Error when importing, checksum error 16: Error when importing, no NVRAM data available 17: Error when importing		
<b>Notice:</b>	Re value = 2, 3: These actions are only possible when pulses are inhibited.		
<b>Note:</b>	After the action has been successfully completed, the parameter is automatically set to zero. The actions importing and deleting NVRAM data immediately initiate a warm restart. If the procedure was not successfully completed, then an appropriate fault value is displayed (p7775 >= 10).		

<b>p7788</b>	<b>Power unit sign-of-life monitoring tolerance window / PU SoL monit tol</b>		
B_INF, VECTOR_G	<b>Can be changed:</b> U, T <b>Data type:</b> Unsigned16 <b>P-Group:</b> Converter <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1000	<b>Access level:</b> 4 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 10
<b>Description:</b>	Setting of the tolerance window for the sign of life monitoring for communication to the power unit.		

**Dependency:** Refer to: A30853

**Note:** An active window is generated by means of DRIVE-CLiQ telegrams.  
If more than one sign-of-life error appears in the window, then A30853 is output.  
The lower the value in p7788, the greater the monitoring tolerance.

---

**p7789 Power unit sign-of-life monitoring fault threshold / PU SoL monit F\_thr**

B_INF, VECTOR_G	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 4
	<b>Data type:</b> Unsigned16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Converter	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	1000	1

**Description:** Sets the number of consecutive sign-of-life errors that are tolerated for communication to the power unit.

**Dependency:** Refer to: F30008

**Note:** F30008 is output in the case of a fault.  
The higher the value in the parameter, the higher the monitoring tolerance.

	-1	14	-

**Description:** Displays the original numerical format of the signals contained in the telegram.  
The associated signal number is represented in the appropriate index of r7831.

**Value:**

- 1: Unknown
- 0: Boolean
- 1: Signed 1 byte
- 2: Signed 2 byte
- 3: Signed 4 byte
- 4: Signed 8 byte
- 5: Unsigned 1 byte
- 6: Unsigned 2 byte
- 7: Unsigned 4 byte
- 8: Unsigned 8 byte
- 9: Float 4 byte
- 10: Double 8 byte
- 11: mm dd yy HH MM SS MS DOW
- 12: ASCII string
- 13: SINUMERIK frame type
- 14: SINUMERIK axis type

**Dependency:** Refer to: r7831

**r7833[0...15] Telegram diagnostics unsigned / Tel diag unsigned**

<b>r7844[0...2]</b>	<b>Memory card/device memory firmware version / Mem_crd/dev_mem FW</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 1
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> -	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-
<b>Description:</b>	Displays the version of the firmware stored on the memory card/device memory.		

<b>Index:</b>	[0] = Internal [1] = External [2] = Parameter backup
<b>Note:</b>	Re index 0: Displays the internal firmware version (e.g. 04402315). This firmware version is the version of the memory card/device memory and not the CU firmware (r0018), however, normally they have the same versions. Re index 1: Displays the external firmware version (e.g. 04040000 -> 4.4). For automation systems with SINAMICS Integrated this is the runtime version of the automation system. Re index 2: Displays the internal CU firmware version (r0018) of the parameter backup. With this CU firmware version, the parameter backup was saved, which was used when powering up.

<b>r7850[0...23]</b>	<b>Drive object operational/not operational / DO ready for oper</b>

<b>Description:</b>	Displays whether, for an activated drive object, all activated topology components are available or not (or whether these can be addressed). 0: Drive object not ready for operation 1: Drive object ready for operation		

<b>p7852</b>	<b>Number of indices for r7853 / Qty indices r7853</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T <b>Data type:</b> Unsigned16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 200	<b>Access level:</b> 4 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1
<b>Description:</b>	Displays the number of indices for r7853[0...n]. This corresponds to the number of DRIVE-CLiQ components that are in the target topology.		
<b>Dependency:</b>	Refer to: r7853		
<b>Note:</b>	The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.		

<b>r7853[0...n]</b>	<b>Component available/not available / Comp present</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> - <b>Data type:</b> Unsigned16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> 0000 hex	<b>Calculated:</b> - <b>Dynamic index:</b> p7852 <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> FFFF hex	<b>Access level:</b> 4 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -
<b>Description:</b>	Displays the component and whether this component is currently present. High byte: Component number Low byte: 0/1 (not available/available)		
<b>Dependency:</b>	Refer to: p7852		
<b>Note:</b>	The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.		

<b>p7857</b>	<b>Sub-boot mode / Sub-boot mode</b>		
B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G	<b>Can be changed:</b> U, T <b>Data type:</b> Integer16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1	<b>Access level:</b> 4 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1
<b>Description:</b>	Sets the mode for the sub-boot.		
<b>Value:</b>	0: Sub-boot manual 1: Sub-boot automatic		
<b>Note:</b>	For p7857 = 0 (manual sub-boot) the following applies: The parameter should be set to 1 to start the sub-boot.		
<b>p7859[0...199]</b>	<b>Component number global / Comp_nr global</b>		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T <b>Data type:</b> Integer16 <b>P-Group:</b> - <b>Not for motor type:</b> - <b>Min</b> -32786	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 32767	<b>Access level:</b> 4 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 0 <b>Factory setting</b> 0
<b>Description:</b>	Sets the global and unique component number in a drive system with several Control Units. Each index of the parameter corresponds to a possible local component number on the corresponding Control Unit. The indices are allocated to the global component numbers as follows: p7859[0]: Not used p7859[1]: Sets the global component number for the local component number 1 p7859[2]: Sets the global component number for the local component number 2 ... p7859[199]: Sets the global component number for the local component number 199		
<b>Notice:</b>	This parameter is preferably set via suitable commissioning software (e.g. UpdateAgent, STARTER, SCOUT). Changing the parameter via the AOP (Advanced Operator Panel) or BOP (Basic Operator Panel) can destroy a valid unique setting.		
<b>Note:</b>	The parameter is not influenced by setting the factory setting.

**Description:**

Displays the configuration changes of all of the drive objects in the complete unit.

**Index:**

[0] = Sum of the following indices  
 [1] = r7871[0] of a drive object  
 [2] = p0101 or r0102  
 [3] = PROFIBUS configuration (p0978)  
 [4] = DRIVE-CLiQ actual topology (r9900 or r9901)  
 [5] = DRIVE-CLiQ target topology (r9902 or r9903)  
 [6] = DRIVE-CLiQ ports (p0109)  
 [7] = OA applications

**Dependency:**

Refer to: r7867, r7871

**Note:**

Index 0:

When changing one of the following indices, then the value in this index is incremented.

Index 1:

Drive object configuration. When changing r7871[0] on a drive object, the value in this index is incremented.

Index 2:

Drive object, configuration unit. When changing either p0101 or r0102, the value in this index is incremented.

Index 3:

PROFIBUS configuration unit. When changing p0978, the value in this index is incremented.

Index 4:

DRIVE-CLiQ actual topology. When changing either r9900 or r9901, the value in this index is incremented.

Index 5:  
DRIVE-CLiQ target topology. When changing either p9902 or p9903, the value in this index is incremented.

Index 6:  
DRIVE-CLiQ ports. When changing p0109, the value in this index is incremented.

Index 7:  
OA applications. When changing OA applications, the value in this index is incremented.

<b>p7900[0...23] Drive objects priority / DO priority</b>			
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 4
	<b>Data type:</b> Unsigned16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> -	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	65535	0
<b>Description:</b>	Sets the priority for processing the existing drive objects in the system.		
	The parameter enables a free sequence to be set for processing the drive objects. For this purpose all the drive object numbers existing in the system have to be written in the desired sequence into the corresponding indices of the parameter. After re-booting this sequence will be effective without a plausibility check.		

With the factory setting the following priorities regarding processing are applicable:

- The drive objects are pre-sorted according to their type as follows: CONTROL UNIT, INFEED, SERVO, VECTOR, TM, HUB, CU\_LINK

- If they are of the same type, they are sorted in ascending order according to their drive object number, i.e. the lower the number, the higher the priority for processing.

**Index:**

[0] = Drive object number Control Unit  
 [1] = Drive object number object 1  
 [2] = Drive object number object 2  
 [3] = Drive object number object 3  
 [4] = Drive object number object 4  
 [5] = Drive object number object 5  
 [6] = Drive object number object 6  
 [7] = Drive object number object 7  
 [8] = Drive object number object 8  
 [9] = Drive object number object 9  
 [10] = Drive object number object 10  
 [11] = Drive object number object 11  
 [12] = Drive object number object 12  
 [13] = Drive object number object 13  
 [14] = Drive object number object 14  
 [15] = Drive object number object 15  
 [16] = Drive object number object 16  
 [17] = Drive object number object 17  
 [18] = Drive object number object 18  
 [19] = Drive object number object 19  
 [20] = Drive object number object 20  
 [21] = Drive object number object 21  
 [22] = Drive object number object 22  
 [23] = Drive object number object 23

**Notice:** This parameter may only be used by qualified service personnel.

**Note:** If the same drive object numbers are used and if the existing drive object numbers in the system are entered incompletely, the content of this parameter is ignored entirely. The behavior as with factory setting will then become effective.

### r7901[0...43] Sampling times / t<sub>sample</sub>

	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays all of the devices connected to the CAN bus after run-up.  
r8600

= 00000000 hex: No drive recognized.

= FFFF0192 hex: Several drives - drive 1 is an Active Line Module, servo drive or vector drive

= FFFF0191 hex: Several drives - 1st drive is a Terminal Module

= 02010192 hex: 1 Vector drive

= 00020192 hex: 1 Servo drive

= 01000192 hex: 1 Active Line Module

= 00080191 hex: 1 Terminal Module

**Note:** Corresponds to the CANopen object 1000 hex.

For each detected drive, the device type is displayed in object 67FF hex + 800 hex \* x (x: Drive number 0 ... 7).

<b>r8601 CAN error register / Error register</b>			
CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned8	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Communications	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the error register for CANopen.

Bit 0: Generic error

0 signal: No error present.

1 signal: Generic error present.

Bit 1 ... 3: Not supported (always a 0 signal)

Bit 4: Communications error

0 signal: There is no message in the range 8700 ... 8799.

1 signal: There is at least one message (fault or alarm) in the range 8700 ... 8799.

Bit 5 ... 6: Not supported (always a 0 signal)  
 Bit 7: Fault outside the range 8700 ... 8799  
 0 signal: There is no fault outside the range 8700 ... 8799.  
 1 signal: There is at least one fault outside the range 8700 ... 8799.  
**Note:** Corresponds to the CANopen object 1001 hex.

**p8602****CAN SYNC object / SYNC object**

CU_G130_DP (CAN),	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3
CU_G130_PN (CAN),	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
CU_G150_DP (CAN),	<b>P-Group:</b> Communications	<b>Units group:</b> -	<b>Unit selection:</b> -
CU_G150_PN (CAN)	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0000 hex	<b>Max</b> FFFF FFFF hex	<b>Factory setting</b> 0080 hex

**Description:** Sets the SYNC object parameter for the following CANopen objects:  
 - 1005 hex: COB-ID

**Note:** SINAMICS operates as SYNC load.  
 COB-ID: CAN object identification

**p8603****CAN COB-ID Emergency Message / COB-ID EMCY Msg**

CU_G130_DP (CAN),	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3
CU_G130_PN (CAN),	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
CU_G150_DP (CAN),	<b>P-Group:</b> Communications	<b>Units group:</b> -	<b>Unit selection:</b> -
CU_G150_PN (CAN)	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0000 hex	<b>Max</b> FFFF FFFF hex	<b>Factory setting</b> 0000 hex

**Description:** Sets the COB-ID for the emergency message (error telegram).  
 It corresponds to the CANopen objects:  
 - 1014 hex: COB-ID

**Note:** If, when downloading, the pre-set value 0 is downloaded, then the CANopen pre-set value 80 hex + Node-ID is automatically set.  
 Online, the value 0 is rejected as, according to the CANopen Standard, COB-ID 0 is not permitted here.  
 The changeover of the node ID using the hardware switch at the Control Unit or per software has no effect on the COB-ID EMCY. The saved value remains effective.

**p8604[0...1]****CAN node guarding / Node guarding**

CU_G130_DP (CAN),	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3
CU_G130_PN (CAN),	<b>Data type:</b> Unsigned16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -

CU_G150_PN (CAN)	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0	<b>Max</b> 65535	<b>Factory setting</b> 0

**Description:** Sets the node guarding parameter for the following CANopen objects:  
 - 100C hex: Guard Time  
 - 100D hex: Life Time Factor  
 The life time is derived by multiplying guard time by the life time factor.

**Index:** [0] = Time interval [ms] for new node guarding telegram  
 [1] = Factor for failure of the node guarding telegram

**Dependency:** Only adjustable if heartbeat time = 0 (heartbeat is disabled).  
Refer to: p8606

**Note:** For p8604[0] = 0 and/or p8604[1] = 0, the node guarding protocol is not used.  
Either node guarding or heartbeat can be used.

<b>p8606 CAN Producer Heartbeat Time / Prod Heartb Time</b>			
CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3

<b>p8620</b>	<b>CAN Node-ID / Node ID</b>		
CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)	<b>Can be changed:</b> T <b>Data type:</b> Unsigned8 <b>P-Group:</b> - <b>Not for motor type:</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> -	<b>Access level:</b> 2 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1
	<b>Min</b> 1	<b>Max</b> 127	<b>Factory setting</b> 126
<b>Description:</b>	Display or setting of the CANopen Node ID. The Node ID can be set as follows: 1) Using the address switch on the Control Unit. --> p8620 can then only be read and displays the selected Node ID. --> A change only becomes effective after a POWER ON. --> CANopen Node ID and PROFIBUS address are identical. 2) Using p8620 --> Only if address 0 is set using the address switch. --> the Node ID is set as standard to 126. --> A change only becomes effective after save and POWER ON.		
<b>Dependency:</b>	Refer to: r8621		
<b>Note:</b>	Every node ID change only becomes effective after a POWER ON. The active node ID is displayed in r8621. The parameter is not influenced by setting the factory setting. It is only possible to independently set CANopen node ID and the PROFIBUS address using p0918 and p8620 (pre-requisite: the address 0 is set for the address switch).		
<b>r8621</b>	<b>CAN Node-ID active / Node ID active</b>

			[5] 1C3B hex	
			[6] 0002 1C15 hex	
			[7] 0004 1C2B hex	

**Description:** Sets the bit timing for the C\_CAN controller to the associated and selected bit rate (p8622).

Bits are distributed to the following parameters of the C\_CAN controller in p8623[0...7]:

Bit 0 ... 5: BRP (Baud Rate Prescaler)

Bit 6 ... 7: SJW (Synchronization Jump Width)

Bit 8 ... 11: TSEG1 (Time Segment 1, before the sampling point)

Bit 12 ... 14: TSEG2 (Time Segment 2, after the sampling point)

Bit 15: Reserved

Bit 16 ... 19: BRPE (Baud Rate Prescaler Extension)

Bit 20 ... 31: Reserved

Example:

Bit rate = 20 kbit/s --> p8622 = 6 --> associated bit timing is in p8623[6] --> 0001 2FB6

**Recommend.:** Use the factory setting when setting the bit timing.

<b>Index:</b>	[0] = 1 Mbit/s
	[1] = 800 kbit/s
	[2] = 500 kbit/s
	[3] = 250 kbit/s
	[4] = 125 kbit/s
	[5] = 50 kbit/s
	[6] = 20 kbit/s
	[7] = 10 kbit/s

**Dependency:** Refer to: p8622

**Note:** The parameter is not influenced by setting the factory setting.

CU_G150_PN (CAN)	<b>Min</b> 0	<b>Max</b> 8	<b>Factory setting</b> 0

**Description:** Sets the number of channels for receive PDOs and Transmit PDOs.  
 To define the number of channels of a drive, there are 3 indices (3 \* n indices, n = 8).  
 Index 0: Number of channels for receive PDOs (1st drive)  
 Index 1: Number of channels for transmit PDOs (1st drive)  
 Index 2: Reserved  
 Correspondingly, indices 3 to 5 are valid for the 2nd drive, etc.

**Index:**  
 [0] = Number of channels for receive PDOs (drive 1)  
 [1] = Number of channels for transmit PDOs (drive 1)  
 [2] = Reserved  
 [3] = Number of channels for receive PDOs (drive 2)  
 [4] = Number of channels for transmit PDOs (drive 2)  
 [5] = Reserved  
 [6] = Number of channels for receive PDOs (drive 3)

	-	-	-

**Description:** Displays the CANopen status word.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Rdy for switch on	Yes	No	-
	01	Ready	Yes	No	-
	02	Operation enabled	Yes	No	-
	03	Fault present	Yes	No	-
	04	No coasting active	Yes	No	-
	05	No Quick Stop active	Yes	No	-
	06	Switching on inhibited active	Yes	No	-
	07	Alarm present	Yes	No	-
	08	Can be freely interconnected (BI: p8785)	High	Low	-
	09	Control request	Yes	No	-
	10	Target reached	Yes	No	-
	11	Torque limit reached	Yes	No	-
	12	Velocity equal to zero	Yes	No	-
	14	Can be freely interconnected (BI: p8786)	High	Low	-
	15	Can be freely interconnected (BI: p8787)	High	Low	-

**Note:** Corresponds to the CANopen object 6041 hex + 800 hex \* x (x: Drive number 0 ... 7).

Re bit 10:

When the ramp-function generator is activated, the interconnection from CI: p2151 = r1119 can be changed, so that to evaluate bit 10, the setpoint can be retrieved (taken) from in front of the ramp-function generator.

Re bit 10, 12:

When braking, the two bits must indicate the same state. This is the reason that the following parameters must be set the same:

p2161 (speed threshold value 3, for r2199.0) = p2163 (speed threshold value 4, for r2197.7)

p2150 (hysteresis speed 3, for r2199.0) = p2164 (hysteresis speed 4, for r2197.7)

**p8785 BI: CAN status word bit 8 / Status word bit 8**

### r8796 CAN Target Velocity / Target velocity

VECTOR_G (CAN)	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> -	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Access to the CANopen object target velocity using the SDO transfer.  
The value is displayed in increments/second as standard.

**Note:** Corresponds to the CANopen object 60FF hex + 800 hex \* x (x: Drive number 0 ... 7).

The displayed value is calculated as follows:

$$r8796 = n\_set [RPM] / 60 \text{ s} * p0408 * 2^{p0418} * p8798[1] / p8798[0]$$

### r8797 CAN Target Torque / Target torque

VECTOR_G (CAN)	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> -	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Access to the CANopen object target torque using SDO transfer.  
The value is displayed as per mille (1/1000) as standard.

**Note:** Corresponds to the CANopen object 6071 hex + 800 hex \* x (x: Drive number 0 ... 7).

The displayed value is calculated as follows:

$$r8797 [\text{per mille}] = M\_set [Nm] / p0333 [Nm] * 1000$$

### p8798[0...1] CAN speed conversion factor / n\_conv\_factor

VECTOR_G (CAN)	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> -	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	1	4294967295	1

**Description:** The factor converts the required velocity units into the internal velocity units (U/s).  
With the factory setting, for CANopen, the velocity units are increments/second.  
The parameter corresponds to the CANopen object 6094 hex.  
The internal velocity is calculated as follows:

$$n\_set\_internal = \text{object } 6094.1 / \text{object } 6094.2 * 1 / (p0408 * 2^{p0418}) * n\_set\_bus$$

**Index:** [0] = Counter  
[1] = Denominator

<b>Note:</b>	A change only becomes effective after POWER ON, reset or project download. Example: p8815[0] = 1: IF1 supports the isochronous mode. p8815[1] = 2: IF2 supports PROFIsafe.		

<b>p8829</b>	<b>CBE20 remote controller number / CBE20 rem ctrl num</b>		
CU_G130_DP (PRO-FINET), CU_G130_PN (PRO-FINET), CU_G150_DP (PRO-FINET), CU_G150_PN (PRO-FINET)	<b>Can be changed:</b> C1(1) <b>Data type:</b> Integer16 <b>P-Group:</b> Communications <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 2	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1
<b>Description:</b>	Sets the number of remote controllers expected for PROFINET CBE20. The "Shared Device" functionality is activated with a value = 2. The drive is being accessed by two PROFINET controllers simultaneously: - automation controller (SIMOTION or SIMATIC A-CPU). - safety controller (SIMATIC F-CPU).		
<b>Value:</b>	1: Automation or Safety 2: Automation and Safety		
<b>Notice:</b>	The F CPU may only use PROFIsafe telegrams. The A CPU must be connected to enable the F CPU to gain access. Set the value = 1 to commission the F CPU individually.		
<b>Note:</b>	A change only becomes effective after a POWER ON.		

<b>p8835</b>	<b>CBE20 firmware selection / CBE20 FW sel</b>		
CU_G130_DP (PRO-FINET), CU_G130_PN (PRO-FINET), CU_G150_DP (PRO-FINET), CU_G150_PN (PRO-FINET)	<b>Can be changed:</b> C1(1) <b>Data type:</b> Integer16 <b>P-Group:</b> Communications <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 99	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1
<b>Description:</b>	Selects the firmware version for the CBE20.		
<b>Value:</b>	1: PROFINET Device 2: PN gate		

- 3: SINAMICS Link  
 4: Ethernet/IP  
 99: Customer-specific from the OEM directory

**Note:** A change only becomes effective after a POWER ON.  
 The parameter is not influenced by setting the factory setting.  
 CBE20: Communication Board Ethernet 20

---

**p8836 SINAMICS Link address / SINAMICS Link add**

CU_G130_DP (PRO-FINET), CU_G130_PN (PRO-FINET), CU_G150_DP (PRO-FINET), CU_G150_PN (PRO-FINET)	<b>Can be changed:</b> C1(1) <b>Data type:</b> Unsigned16 <b>P-Group:</b> Communications <b>Not for motor type:</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1
---	--	---	--

<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
0	64	0

**Description:** Selects the node address for the SINAMICS Link on the Communication Board Ethernet 20 (CBE20).  
 p8836 = 0: SINAMICS Link de-activated  
 p8836 = 1 ... 64: SINAMICS Link node address

**Dependency:** Refer to: p8835

**Note:** SINAMICS Link requires that the appropriate CBE20 firmware version is selected (p8835 = 3).  
 A change only becomes effective after a POWER ON.  
 The parameter is not influenced by setting the factory setting.

---

**p8837 IF2 STW1.10 = 0 mode / IF2 STW1.10=0**

B_INF, ENC, VECTOR_G	<b>Can be changed:</b> T <b>Data type:</b> Integer16 <b>P-Group:</b> Communications <b>Not for motor type:</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1
-------------------------	---	---	--

<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
0	2	2

**Description:** Sets the processing mode for PROFIdrive STW1.10 "master control by PLC".  
 Generally, control word 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.

**Value:** 0: Freeze setpoints and continue to process sign-of-life  
 1: Freeze setpoints and sign-of-life  
 2: Do not freeze setpoints

**Recommend.:** Do not change the setting p2037 = 0.

**Note:** If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.

---

**p8839[0...1] PZD interface hardware assignment / PZD IF HW assign**

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	<b>Can be changed:</b> C1(1) <b>Data type:</b> Integer16 <b>P-Group:</b> Communications <b>Not for motor type:</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1
---	---	---	--

<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
0	99	99

**Description:** Assignment of the hardware for cyclic communications via PZD interface 1 (IF1) and interface 2 (IF2).

**Value:** 0: Inactive  
 1: Control Unit onboard  
 2: COMM BOARD  
 99: Automatic

**Index:** [0] = Interface 1  
[1] = Interface 2

**Dependency:** Refer to: p2030, p8815

**Note:** For value = 99 (automatic) the following applies:  
 - if a COMM BOARD is not inserted, then the onboard interface (PROFIBUS/PROFINET/US) communicates via IF1.  
 - if a CBE20 is inserted, then the following applies:  
 -- CU320-2 DP: PROFINET CBE20 communicates via IF1 and PROFIBUS/US via IF2.  
 -- CU320-2 PN: PROFINET onboard communicates via IF1 and PROFINET CBE20 via IF2.  
 - CAN CBC10 always communicates via IF2.  
 For a value not equal to 99 (automatic) the following applies:  
 - both indices must be set to a number not equal to 99 (automatic).  
 A change only becomes effective after POWER ON, reset or download.

<b>p8840 COMM BOARD monitoring time / CB t_monit</b>			
CU_G130_DP (COMM BOARD, PROFINET), CU_G130_PN (COMM BOARD, PROFINET), CU_G150_DP (COMM BOARD, PROFINET), CU_G150_PN (COMM BOARD, PROFINET)	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 3

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the COMM BOARD diagnostics data.

**Note:** The display depends on the COMM BOARD being used.  
 Example for CBE20:  
 r8858[0] = 4201 --> Siemens CBE20  
 r8858[1] = 1 --> firmware type = PROFINET device (see p8835)  
 r8858[2] = x --> state of cyclic communication  
 r8858[3] = y --> state of the IP configuration  
 r8858[4] = 1281 --> device ID 0501 hex = SINAMICS S120/S150  
 r8858[5 ... 39] --> only for internal Siemens diagnostics.

---

### r8859[0...7] COMM BOARD identification Data / CB Ident\_data

CU_G130_DP (COMM BOARD, PROFINET), CU_G130_PN (COMM BOARD, PROFINET), CU_G150_DP (COMM BOARD, PROFINET), CU_G150_PN (COMM BOARD, PROFINET)	<b>Can be changed:</b> - <b>Data type:</b> Unsigned16 <b>P-Group:</b> Communications <b>Not for motor type:</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1
---	--	---	--

<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
-	-	-

**Description:** Displays the COMM BOARD identification data

**Index:**  
 [0] = Version interface structure  
 [1] = Version interface driver  
 [2] = Company (Siemens = 42)  
 [3] = CB type  
 [4] = Firmware version  
 [5] = Firmware date (year)  
 [6] = Firmware date (day/month)  
 [7] = Firmware patch/hot fix

**Note:**  
 Example for CBE20:  
 r8859[0] = 100 --> version of the interface structure V1.00  
 r8859[1] = 111 --> version of the interface driver V1.11  
 r8859[2] = 42 --> SIEMENS  
 r8859[3] = 0 --> CBE20  
 r8859[4] = 1200 --> first part, firmware version V12.00 (second part, see index 7)  
 r8859[5] = 2010 --> year 2010  
 r8859[6] = 2306 --> 23rd June  
 r8859[7] = 1300 --> second part, firmware version (complete version: V12.00.13.00)

#### p8899[0...1] CI: IF2 connector-binector converter signal source / Con/bin S\_src

B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, VECTOR_G	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32 / Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2485, 2491
	<b>P-Group:</b> Communications	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1

<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
-	-	0

**Description:** Sets the signal source for the connector-binector converter.  
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

**Dependency:** Refer to: r8850, r8894, r8895, p8898

**Note:** From the signal source set via the connector input, the corresponding lower 16 bits are converted.  
p8899[0...1] together with r8894.0...15 and r8895.0...15 forms two connector-binector converters:  
Connector input p8899[0] to binector output in r8894.0...15  
Connector input p8899[1] to binector output in r8895.0...15

<b>p8900[0...239] IE Name of Station / IE Name Stat</b>

	0	13	-
<b>Description:</b>	Displays the state of the cyclic PROFINET connections. For two connections (Shared Device) the display in the index depends on the sequence in which the connections are established.		
<b>Value:</b>	0: Interrupted 1: Not connected 2: Connection starts to be established 3: Module information expected 4: Module information received 5: Module address expected		

- 6: Module address received
- 7: Parameterization data expected
- 8: Parameterization data received
- 9: Evaluate parameterization data
- 10: Connection being established completion expected
- 11: Configured controller RUN expected
- 12: Configured controller STOP
- 13: Configured controller RUN

**Dependency:**

Refer to: p8829

**Note:**

If value = 10:

If the connection remains in this state, then when using PROFINET IRT the following can apply:

- topology error (incorrect port assignment).
- synchronization missing.

---

**r8937[0...5]****PN diagnostics / PN diag**CU\_G130\_PN,  
CU\_G150\_PN**Can be changed:** -**Calculated:** -**Access level:** 3**Data type:** Unsigned32**Dynamic index:** -**Func. diagram:** -**P-Group:** -**Units group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

-

-

-

**Description:**

Display to diagnose the cyclic PROFINET connections.

**Index:**

- [0] = Number of cyclic connections
- [1] = Number of send subslots of all connections
- [2] = Number of send net data (bytes) of all connections
- [3] = Number of receive subslots of all connections
- [4] = Number of receive net data (bytes) of all connections
- [5] = Connection type (RT, IRT)

**Dependency:**

Refer to: p8929

**Note:**

Re index 5:

Bit 0 = 1: there is at least one RT connection.

Bit 1 = 1: there is an IRT connection.

Min	Max	Factory setting
-	-	-

**Description:** Sets the station name for the Communication Board Ethernet 20 (CBE20).

**Note:** An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.  
The parameter is only valid for firmware version "PROFINET Device" (p8835 = 1) or "Ethernet/IP" (p8835 = 4).  
The interface configuration (p8940 and following) is activated with p8945 = 2 (becomes effective after the next POWER ON).  
The parameter is not influenced by setting the factory setting.

**p8941[0...3] CBE20 IP Address of Station / CBE20 IP of Stat**

CU_G150_PN (PRO-FINET)	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1

Min	Max	Factory setting
0	3	0

**Description:** Sets the activation of the interface configuration for the Communication Board Ethernet 20 (CBE20). p8945 is automatically set to 0 at the end of an operation.

**Value:**  
0: No function  
2: Save and activate configuration  
3: Delete configuration

**Note:** The parameter is only valid for firmware version "PROFINET Device" (p8835 = 1) or "Ethernet/IP" (p8835 = 4). Otherwise, it is locked.  
Re p8945 = 2:  
The interface configuration (p8940 and following) is saved and activated after the next POWER ON.  
Re p8945 = 3:  
The factory setting of the interface configuration is loaded after the next POWER ON.

<b>Description:</b>	Sets the function configuration for the safe motion monitoring functions.																												
<b>Bit field:</b>	<table> <tr> <th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr> <tr> <td>00</td><td>Extended message acknowledgement</td><td>Yes</td><td>No</td><td>-</td></tr> <tr> <td>01</td><td>Setpoint velocity limit for STOP F</td><td>No</td><td>Yes</td><td>-</td></tr> <tr> <td>02</td><td>Motor type sensorless actual value sensing</td><td>Synchronous motor</td><td>Induction motor</td><td>-</td></tr> <tr> <td>03</td><td>SS1 drive-based braking response</td><td>without OFF3</td><td>with OFF3</td><td>-</td></tr> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Extended message acknowledgement	Yes	No	-	01	Setpoint velocity limit for STOP F	No	Yes	-	02	Motor type sensorless actual value sensing	Synchronous motor	Induction motor	-	03	SS1 drive-based braking response	without OFF3	with OFF3	-			
Bit	Signal name	1 signal	0 signal	FP																									
00	Extended message acknowledgement	Yes	No	-																									
01	Setpoint velocity limit for STOP F	No	Yes	-																									
02	Motor type sensorless actual value sensing	Synchronous motor	Induction motor	-																									
03	SS1 drive-based braking response	without OFF3	with OFF3	-																									
<b>Dependency:</b>	Refer to: C01711																												
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.																												
<b>Note:</b>	Re bit 00: When the function is activated, a safety-relevant acknowledgement (internal event acknowledge) can be performed by selecting/deselecting STO. Re bit 01: When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.																												

Re bit 02:

This bit defines the type of motor, which the sensorless safety technology evaluates.

For bit = 0, the sensorless motion monitoring function calculates the actual velocity for an induction motor.

For bit = 1, an actual velocity is calculated for a synchronous motor. This value depends on the setting in p0300.

Bit = 0 should be set if no motor is defined (p0300 = 0).

Re bit 03:

When the function is activated, the drive-based braking response (OFF3 ramp) after SS1/internal STOP B is deactivated. Braking monitoring (SBR, SAM) is also deactivated.

p9309		SI Motion behavior during pulse suppression (Motor Module) / SI Mtn behav IL MM				
VECTOR_G	<b>Can be changed:</b> C2(95)		<b>Calculated:</b> -		<b>Access level:</b> 3	
	<b>Data type:</b> Unsigned32		<b>Dynamic index:</b> -		<b>Func. diagram:</b> -	
	<b>P-Group:</b> Safety Integrated		<b>Units group:</b> -		<b>Unit selection:</b> -

	<b>Min</b>		<b>Max</b>		<b>Factory setting</b>	
	-		-		0000 0000 1111 1111 bin	
<b>Description:</b>		Sets the behavior of safety functions and their feedback during pulse suppression in encoderless operation.				
<b>Bit field:</b>		<b>Bit</b>	<b>Signal name</b>	<b>1 signal</b>	<b>0 signal</b>	<b>FP</b>
		00	SSM during pulse suppression and sensorless	Becomes inactive	Remains active	-
		08	SDI during pulse suppression and sensorless	Becomes inactive	Remains active	-
<b>Dependency:</b>		Refer to: C01711				
<b>Notice:</b>		This parameter is overwritten by the copy function of the safety functions integrated in the drive.				
		Re bit 00:				
		If the OFF1 or the OFF3 ramp-down time is too low, or there is an insufficient clearance between the SSM limit speed, and the shutdown speed, then it is possible that the "speed under limit value" signal does not change to 1, because no speed actual value below the SSM limit was able to be identified before pulse cancellation. In this case, the OFF1 or the OFF3 ramp-down time or the clearance between the SSM limit speed and shutdown speed must be increased.				
<b>Note:</b>		SDI: Safe Direction (safe motion direction)				
		SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)				
		Re bit 00:				
		For bit = 1 and with the SSM safety function activated, the following applies:				
		- During pulse suppression, monitoring is switched off and the feedback signal has a 0 signal level.				
		For bit = 0 and with the SSM safety function activated, the following applies:				
		- Monitoring continues during pulse suppression. The feedback signal last displayed before pulse suppression is kept and the system goes into the STO state.				
		Re bit 08:				
		For bit = 1 and with the SDI safety function activated, the following applies:				
		- During pulse suppression, monitoring is switched off and the status signal indicates inactive.				
		For bit = 0 and with the SDI safety function activated, the following applies:				
		- Monitoring continues during pulse suppression. The status signal indicates active and the system goes into the STO state.				

p9311				SI Motion actual value sensing clock cycle (Motor Module) / SI Mtn act clk MM			
VECTOR_G	Can be changed: C2(95)		Calculated: -		Access level: 3		
	Data type: FloatingPoint32		Dynamic index: -		Func. diagram: -		
	P-Group: Safety Integrated		Units group: -		Unit selection: -		
	Not for motor type: -		Scaling: -		Expert list: 1		
	Min		Max		Factory setting		
	0.0000 [µs]		25000.0000 [µs]		0.0000 [µs]		
Description:		Sets the clock cycle time of the actual value sensing for safe motion monitoring.					

Setting criteria if the motion monitoring functions are executed with an encoder.

- A slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for safe actual value sensing.

- The maximum permissible velocity which, when exceeded, can mean that errors occur during safe actual value sensing, is displayed in r9730.

- The isochronous PROFIBUS clock cycle is used as a clock cycle time for actual value sensing with a setting of 0 ms; the setting is 1 ms if isochronous operation is not being used.

Setting criteria if the motion monitoring functions are executed without an encoder:

- The actual value sensing clock cycle must be set to the same value as the current controller clock cycle (p0115).

**Dependency:**

Refer to: p0115, p9300, p9511

Refer to: F01652

**Notice:**

This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**

The parameter is only active for drive-based motion monitoring functions (p9801.2 = 1).

The monitoring clock cycle from p9300 must be an integer multiple of this parameter.

In the case of motion monitoring functions with encoder, the clock cycle time for actual value sensing must be an integer multiple of the current controller clock cycle and at least 4 times slower than the current controller clock cycle. A factor of at least 8 is recommended.

The clock cycle time of the actual value sensing should not be set to more than 8 ms.

A change only becomes effective after a POWER ON.

p9312		Select SI Motion safety functions without selection (MM) / SI Mtn w/o sel MM

<b>Note:</b>	For safety functions that have not been enabled (p9301 = 0), the following applies: When booting, p9319 is automatically set the same as p0418. For safety functions that are enabled (p9301 > 0), the following applies: p9319 is checked for agreement with p0418. G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)		
<b>p9320</b>	<b>SI Motion spindle pitch (Motor Module) / SI Mtn sp_pitch MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.1000 [mm]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 8388.0000 [mm]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 10.0000 [mm]
<b>Description:</b>	Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		

**Dependency:** Refer to: p9520

**Notice:** The fourth decimal point can be rounded-off depending on the size of the entered number (from 3 places before the decimal point).

---

**p9321[0...7] SI Motion gearbox encoder (motor)/load denom (Motor Module) / SI Mtn gearDenomMM**

<b>VECTOR_G</b>	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	1	2147000000	1

**Description:** Sets the denominator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load.

**Index:** [0] = Gearbox 1  
[1] = Gearbox 2  
[2] = Gearbox 3  
[3] = Gearbox 4  
[4] = Gearbox 5  
[5] = Gearbox 6  
[6] = Gearbox 7  
[7] = Gearbox 8

**Dependency:** Refer to: p9322

**Notice:** It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.

---

**p9322[0...7] SI Motion gearbox encoder (motor)/load numerator (Motor Module) / SI Mtn gear num MM**

<b>VECTOR_G</b>	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	1	2147000000	1

**Description:** Sets the numerator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load.

**Index:** [0] = Gearbox 1  
[1] = Gearbox 2  
[2] = Gearbox 3  
[3] = Gearbox 4  
[4] = Gearbox 5  
[5] = Gearbox 6  
[6] = Gearbox 7  
[7] = Gearbox 8

**Dependency:** Refer to: p9321

**Notice:** It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.

**Note:** In the case of encoderless monitoring functions, the pole pair number must be multiplied by the numerator of the gearbox ratio.

Example:

Gearbox ratio 1:4, pole pair number (r0313) = 2

--> p9321 = 1, p9322 = 8 (4 x 2)

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [µs]	600000000.00 [µs]	0.00 [µs]

**Description:** Sets the transition time from STOP F to STOP B.

**Dependency:** Refer to: C01711

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

---

### **p9356 SI Motion pulse suppression delay time (Motor Module) / SI Mtn IL t\_del MM**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2825
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [µs]	3600000000.00 [µs]	100000.00 [µs]

**Description:** Sets the delay time for the safe pulse suppression after STOP B / SS1.

In the case of encoderless motion monitoring functions with safe brake ramp monitoring (p9306 = 1) and the OFF3 ramp enabled at the same time (p9507.3 = 0), the parameter has no effect.

**Dependency:** Refer to: p9360, p9556

Refer to: C01701

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** SS1: Safe Stop 1

---

### **p9357 SI Motion pulse suppression test time (Motor Module) / SI Mtn IL t MM**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [µs]	10000000.00 [µs]	100000.00 [µs]

**Description:** Sets the time after which the pulses must have been suppressed when initiating the test stop.

**Dependency:** Refer to: p9557

Refer to: C01798

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

---

### **p9358 SI Motion acceptance test mode time limit (Motor Module) / SI Mtn acc t MM**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	5000000.00 [µs]	100000000.00 [µs]	40000000.00 [µs]

**Description:** Sets the maximum time for the acceptance test mode.

If the acceptance test mode takes longer than the selected time limit, then the mode is automatically terminated.

**Dependency:** Refer to: p9558

Refer to: C01799

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

<b>p9360</b>	<b>SI Motion pulse suppression shutdown velocity (Motor Module) / SI Mtn IL v_sh MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [mm/min]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 6000.00 [mm/min]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0.00 [mm/min]
<b>Description:</b>	Sets the shutdown velocity for pulse suppression. Below this velocity "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A). In the case of encoderless motion monitoring functions, the parameter must be > 0 (recommended value: 10).		
<b>Dependency:</b>	Refer to: p9356, p9560		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	SS1: Safe Stop 1		
<b>p9360</b>	<b>SI Motion pulse suppression shutdown speed (Motor Module) / SI Mtn IL n_sh MM</b>

### p9365 SI Motion SDI delay time (Motor Module) / SI Mtn SDI t MM

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2861
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [µs]	600000000.00 [µs]	100000.00 [µs]

**Description:** Sets the delay time for the function "Safe motion direction" (SDI). When selecting the SDI function, motion in the monitored direction is permissible as a maximum for this time; this means that this time can be used for braking existing motion.

**Dependency:** Refer to: p9364, p9366

Refer to: C30716

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** SDI: Safe Direction (safe motion direction)

---

### p9366 SI Motion SDI stop response (Motor Module) / SI Mtn SDI Stop MM

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2861
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	14	1

**Description:** Sets the stop response for the function "Safe motion direction" (SDI).

This setting applies to both directions of motion.

In the case of encoderless motion monitoring (p9306 = 1), only a value of 0 or 1 is permitted.

**Value:**

0:	STOP A
1:	STOP B
2:	STOP C
3:	STOP D
4:	STOP E
10:	STOP A with delayed pulse suppression when the bus fails
11:	STOP B with delayed pulse suppression when the bus fails
12:	STOP C with delayed pulse suppression when the bus fails
13:	STOP D with delayed pulse suppression when the bus fails
14:	STOP E with delayed pulse suppression when the bus fails

**Dependency:** Refer to: p9364, p9365

Refer to: C30716

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F).

SDI: Safe Direction (safe motion direction)

---

### p9368 SI Motion SAM velocity limit (Motor Module) / SI Mtn SAM v\_limMM

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [mm/min]	1000.00 [mm/min]	0.00 [mm/min]

**Description:** Sets the velocity tolerance limit for the "SAM" function.

SAM is de-activated once the set velocity limit has been undershot.

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** SAM: Safe Acceleration Monitor (safe acceleration monitoring)

SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

For p9568 = p9368 = 0, the following applies:

The value in p9546/p9346 (SSM) is applied as the velocity limit for SAM.

<b>p9368</b>		<b>SI Motion SAM velocity limit (Motor Module) / SI Mtn SAM v_limMM</b>	
VECTOR_G (Safety rot)	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0.00 [rpm]	<b>Max</b> 1000.00 [rpm]	<b>Factory setting</b> 0.00 [rpm]
<b>Description:</b>	Sets the velocity tolerance limit for the "SAM" function. SAM is de-activated once the set velocity limit has been undershot.		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	SAM: Safe Acceleration Monitor (safe acceleration monitoring) SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) For p9568 = p9368 = 0, the following applies: The value in p9546/p9346 (SSM) is applied as the velocity limit for SAM.		

<b>p9370</b>		<b>SI Motion acceptance test mode (Motor Module) / SI Mtn acc_mod MM</b>	
VECTOR_G	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0000 hex	<b>Max</b> 00AC hex	<b>Factory setting</b> 0000 hex
<b>Description:</b>	Setting to select and de-select the acceptance test mode.		
<b>Value:</b>	0: [00 hex] De-select the acceptance test mode 172: [AC hex] Select the acceptance test mode		
<b>Dependency:</b>	Refer to: p9358, r9371 Refer to: C01799		
<b>Note:</b>	Acceptance test mode can only be selected if the motion monitoring functions, which are integrated in the drives, are enabled (p9601.2/p9801.2).		

<b>r9371</b>		<b>SI Motion acceptance test status (Motor Module) / SI Mtn acc_stat MM</b>	
VECTOR_G	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -

	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0000 hex	<b>Max</b> 00AC hex	<b>Factory setting</b> -
<b>Description:</b>	Displays the status of the acceptance test mode.		
<b>Value:</b>	0: [00 hex] Acc_mode inactive 12: [0C hex] Acc_mode not possible due to POWER ON fault 13: [0D hex] Acc_mode not possible due to incorrect ID in p9370 15: [0F hex] Acc_mode not possible due to expired Acc_timer 172: [AC hex] Acc_mode active		
<b>Dependency:</b>	Refer to: p9358, p9370 Refer to: C01799		

<b>p9374</b>	<b>SI Motion safe position scaling (Motor Module) / SI mtn SP scal MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Integer32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 100000	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1000
<b>Description:</b>	Sets the scaling factor to transfer the safe position via PROFIsafe in the 16-bit notation.		
<b>Dependency:</b>	Refer to: r9713		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	The parameter is only effective when PROFIsafe telegram 901 is selected. By selecting a suitable scaling of the 32 bit position actual value (r9713[0]), it must be ensured that the scaled position actual value is not greater than 16 bit. The scaling is realized by dividing r9713[0] with this scaling factor. If, during operation, a position actual value is determined, which cannot be scaled to the 16 bits, then message C30711 with value 7001 is output and safety stop response STOP F.		
<b>p9380</b>	<b>SI Motion pulse suppression delay bus failure (Motor Module) / SI Mtn t to IL MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [µs]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 800000.00 [µs]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0.00 [µs]
<b>Description:</b>	Sets the delay time after which the pulses are safely suppressed after a bus failure.		
<b>Dependency:</b>	Refer to: p9363		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F). The main use of the wait time is the ESR function (Extended Stop and Retract).		
<b>p9381</b>	<b>SI Motion brake ramp reference value (Motor Module) / SI Mtn ramp ref MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 600.0000 [mm/min]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 240000.0000 [mm/min]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1500.0000 [mm/min]
<b>Description:</b>	Sets the reference value to define the brake ramp. The rate of rise of the brake ramp depends upon p9381 (reference value) and p9383 (monitoring time).		
<b>Dependency:</b>	Refer to: p9382, p9383		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>p9381</b>	<b>SI Motion brake ramp reference value (Motor Module) / SI Mtn ramp ref MM</b>

	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> -1	<b>Max</b> 4	<b>Factory setting</b> -1
<b>Description:</b>	Sets the tolerance of the plausibility monitoring of the current and voltage angle p9385 = 4 must be parameterized for synchronous motors.		
<b>Dependency:</b>	Refer to: p9507 Refer to: C01711, F30681		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive. Reducing this value can adversely affect the actual value sensing and the plausibility check. When the value is increased, this results in a longer evaluation delay.		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3). For a value of -1, for synchronous motors, the value 4 is used automatically for the calculation – and for induction motors, the value 0.		

<b>p9386</b>	<b>SI Motion delay time of the evaluation sensorless (MM) / SI Mtn t<sub>del</sub> SL MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 5.00 [ms]	<b>Max</b> 1000.00 [ms]	<b>Factory setting</b> 100.00 [ms]
<b>Description:</b>	Sets the evaluation delay for encoderless actual value sensing after pulse enable. The value should be greater than or equal to the motor magnetizing time.		

**Dependency:** Refer to: C30711

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.  
If this value is reduced, this can have a negative impact on the actual value acquisition and plausibility check – and result in Safety message C30711 with the message value 1041 or 1042.  
When the value is increased, this results in a longer evaluation delay.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

---

**p9387 SI Motion act val sensing encoderless filter time (Motor Module) / SI Mtn SL filt MM**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0.00 [µs]	<b>Max</b> 100000.00 [µs]	<b>Factory setting</b> 25000.00 [µs]

**Description:** Sets the filter time for smoothing the actual value with sensorless actual value sensing.

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

---

**p9388 SI Motion act val sensing encoderless min current (Motor Module) / SI Mtn SL I\_min MM**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0.00 [%]	<b>Max</b> 1000.00 [%]	<b>Factory setting</b> 10.00 [%]

**Description:** Sets the minimum current for encoderless actual value sensing in reference to 10 mA (i.e. when 1 % = 10 mA).  
- The value must be increased if C30711 has occurred with message value 1042.  
- The value must be decreased if C30711 has occurred with message value 1041.

**Dependency:** Refer to: C30711

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.  
Reducing this percentage value can adversely affect actual value sensing.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

---

**p9389 SI Motion voltage tolerance acceleration (Motor Module) / SI Mtn U tol MM**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 10.00 [%]	<b>Max</b> 3300.00 [%]	<b>Factory setting</b> 100.00 [%]

**Description:** Sets the voltage tolerance for suppressing acceleration peaks.  
An increase in this percentage value means that voltage peaks will need to have a higher amplitude when accelerating if they are not to affect actual value sensing.  
- The value must be increased if C30711 with message value 1042 has occurred.  
- The value must be lowered if acceleration procedures have led to an excessive Safety actual velocity.

**Dependency:** Refer to: C30711

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

**r9390[0...3] SI Motion version safety motion monitoring (Motor Module) / SI Mtn Version MM**

	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the parameters that were not able to be transferred when reading the parameter back-up files (PS files) from the non-volatile memory (e.g. memory card).

r9406[0] = 0

--> All of the parameter values were able to be transferred error-free.

r9406[0...x] > 0

--> indicates the parameter number in the following cases:

- parameter, whose value was not able to be completely accepted.

- indexed parameter, where at least 1 index was not able to be accepted. The first index that is not transferred is displayed in r9407.

**Dependency:**

Refer to: r9407, r9408

**Note:**

All indices from r9406 to r9408 designate the same parameter.

r9406[x] parameter number, parameter not accepted

r9407[x] parameter index, parameter not accepted

r9408[x] fault code, parameter not accepted

**r9407[0...19]****PS file parameter index parameter not transferred / PS parameter index**

**Value:** 0: Safety with encoder and accel\_monitoring(SAM) / delay time  
1: Safety without encoder with braking ramp (SBR)  
3: Safety without encoder with accel\_monitoring(SAM) / delay time

**Dependency:** Refer to: C01711

---

**p9507** **SI Motion function specification (Control Unit) / SI Mtn config CU**

VECTOR\_G      **Can be changed:** C2(95)      **Calculated:** -      **Access level:** 3  
**Data type:** Unsigned32      **Dynamic index:** -      **Func. diagram:** -  
**P-Group:** Safety Integrated      **Units group:** -      **Unit selection:** -  
**Not for motor type:** -      **Scaling:** -      **Expert list:** 1  
**Min**      **Max**      **Factory setting**  
-      -      0000 bin

**Description:** Sets the function configuration for the safe motion monitoring functions.

**Bit field:**

Bit	Signal name	1 signal	0 signal	FP
00	Extended message acknowledgement	Yes	No	-
01	Setpoint velocity limit for STOP F	No	Yes	-
02	Motor type sensorless actual value sensing	Synchronous motor	Induction motor	-
03	SS1 drive-based braking response	without OFF3	with OFF3	-

**Dependency:** Refer to: C01711

**Note:** Re bit 00:  
When the function is activated, a safety-relevant acknowledgement (internal event acknowledge) can be performed by selecting/deselecting STO.

Re bit 01:  
When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.

Re bit 02:  
This bit defines the type of motor, which the sensorless safety technology evaluates.  
For bit = 0, the sensorless motion monitoring function calculates the actual velocity for an induction motor.  
For bit = 1, an actual velocity is calculated for a synchronous motor. This value depends on the setting in p0300.  
Bit = 0 should be set if no motor is defined (p0300 = 0).

Re bit 03:  
When the function is activated, the drive-based braking response (OFF3 ramp) after SS1/internal STOP B is deactivated. Braking monitoring (SBR, SAM) is also deactivated.

<b>p9509</b>		<b>SI Motion behavior during pulse suppression (Control Unit) / SI Mtn behav IL CU</b>																		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0000 0000 1111 1111 bin																	
<b>Description:</b>	Sets the behavior of safety functions and their feedback during pulse suppression in encoderless operation.																			
<b>Bit field:</b>	<table><tr><th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr><tr><td>00</td><td>SSM during pulse suppression and sensorless</td><td>Becomes inactive</td><td>Remains active</td><td>-</td></tr><tr><td>08</td><td>SDI during pulse suppression and sensorless</td><td>Becomes inactive</td><td>Remains active</td><td>-</td></tr></table>	Bit	Signal name	1 signal	0 signal	FP	00	SSM during pulse suppression and sensorless	Becomes inactive	Remains active	-	08	SDI during pulse suppression and sensorless	Becomes inactive	Remains active	-				
Bit	Signal name	1 signal	0 signal	FP																
00	SSM during pulse suppression and sensorless	Becomes inactive	Remains active	-																
08	SDI during pulse suppression and sensorless	Becomes inactive	Remains active	-																
<b>Dependency:</b>	Refer to: C01711																			
<b>Notice:</b>	Re bit 00: If the OFF1 or the OFF3 ramp-down time is too low, or there is an insufficient clearance between the SSM limit speed, and the shutdown speed, then it is possible that the "speed under limit value" signal does not change to 1, because no speed actual value below the SSM limit was able to be identified before pulse cancellation. In this case, the OFF1 or the OFF3 ramp-down time or the clearance between the SSM limit speed and shutdown speed must be increased.																			
<b>Note:</b>	SDI: Safe Direction (safe motion direction) SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) Re bit 00: For bit = 1 and with the SSM safety function activated, the following applies: - During pulse suppression, monitoring is switched off and the feedback signal has a 0 signal level. For bit = 0 and with the SSM safety function activated, the following applies: - Monitoring continues during pulse suppression. The feedback signal last displayed before pulse suppression is kept and the system goes into the STO state. Re bit 08: For bit = 1 and with the SDI safety function activated, the following applies: - During pulse suppression, monitoring is switched off and the status signal indicates inactive. For bit = 0 and with the SDI safety function activated, the following applies: - Monitoring continues during pulse suppression. The status signal indicates active and the system goes into the STO state.																			

<b>p9510</b>		<b>SI Motion clock-cycle synchronous PROFIBUS master / SI Mtn sync master</b>			
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Integer16 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1	<b>Access level:</b> 4 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0		
<b>Description:</b>	Setting for clock cycle synchronous communication between PROFIdrive controller and Control Unit. The parameter is only relevant, if the safety-relevant motion monitoring functions integrated in the drive have been enabled (p9601.2 =1 ). If a PROFIdrive controller exchanges process data in clock cycle synchronism with the Control Unit, then p9510 must be set to 1. This also applies if the drive itself does not exchange process data in clock cycle synchronism. Examples for clock cycle synchronous communication: - clock-cycle synchronous control for the motion control (e.g. SIMOTION). - clock-cycle synchronous PROFIsafe master (e.g. SIMATIC S7-400F).				
<b>Value:</b>	0: Communication not isochronous 1: Communication isochronous				
<b>Dependency:</b>	Refer to: C01711, A01796				
<b>Notice:</b>	As of firmware version 2.6, the parameter has no effect.				

<b>p9511</b>	<b>SI Motion actual value sensing cycle clock (Control Unit) / SI Mtn act clk CU</b>																							
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.0000 [ms]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 25.0000 [ms]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0.0000 [ms]																					
<b>Description:</b>	Sets the clock cycle time of the actual value sensing for safe motion monitoring. Setting criteria if the motion monitoring functions are executed with an encoder. - A slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for safe actual value sensing. - The maximum permissible velocity which, when exceeded, can mean that errors occur during safe actual value sensing, is displayed in r9730. - The isochronous PROFIBUS clock cycle is used as a clock cycle time for actual value sensing with a setting of 0 ms; the setting is 1 ms if isochronous operation is not being used. Setting criteria if the motion monitoring functions are executed without an encoder: - The actual value sensing clock cycle must be set to the same value as the current controller clock cycle (p0115).																							
<b>Dependency:</b>	Refer to: p0115 Refer to: F01652																							
<b>Note:</b>	The parameter is only active for drive-based motion monitoring functions (p9601.2 = 1). The monitoring clock cycle from p9500 must be an integer multiple of this parameter. In the case of motion monitoring functions with encoder, the clock cycle time for actual value sensing must be an integer multiple of the current controller clock cycle and at least 4 times slower than the current controller clock cycle. A factor of at least 8 is recommended. The clock cycle time of the actual value sensing should not be set to more than 8 ms. A change only becomes effective after a POWER ON.																							
<b>p9512</b>	<b>Select SI Motion safety functions without selection (CU) / SI Mtn w/o sel CU</b>																							
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0000 0000 0001 0000 bin																					
<b>Description:</b>	Sets the safety functions without selection. The safety functions without selection are enabled with p9601.5/p9801.5. Using this parameter, the individual motion monitoring functions can then be selected (e.g. SLS, SDI positive, SDI negative), which should then be permanently selected.																							
<b>Bit field:</b>	<table> <tr> <th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr> <tr> <td>04</td><td>SLS static (CU)</td><td>Statically active</td><td>Statically inactive</td><td>-</td></tr> <tr> <td>12</td><td>SDI positive static (CU)</td><td>Statically active</td><td>Statically inactive</td><td>-</td></tr> <tr> <td>13</td><td>SDI negative static (CU)</td><td>Statically active</td><td>Statically inactive</td><td>-</td></tr> </table>	Bit	Signal name	1 signal	0 signal	FP	04	SLS static (CU)	Statically active	Statically inactive	-	12	SDI positive static (CU)	Statically active	Statically inactive	-	13	SDI negative static (CU)	Statically active	Statically inactive	-

<b>Dependency:</b>	Refer to: r0474, p9315																																	

**Note:** For safe functions that are not enabled (p9501 = 0), the following applies:  
 - p9515 is automatically set the same as p0474 when the system boots.  
 For safety functions that are enabled (p9501 > 0), the following applies:  
 - p9515 is checked to see that it matches p0474.

<b>p9516</b>	<b>SI Motion encoder configuration safety functions (Control Unit) / SI Mtn enc_cfg CU</b>																		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned16 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0000 bin																
<b>Description:</b>	Sets the configuration for the motor encoder and position actual value. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.																		
<b>Bit field:</b>	<table> <tr> <th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr> <tr> <td>00</td><td>Motor encoder, rotating/linear</td><td>Linear</td><td>Rotating:</td><td>-</td></tr> <tr> <td>01</td><td>Position actual value, sign change</td><td>Yes</td><td>No</td><td>-</td></tr> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Motor encoder, rotating/linear	Linear	Rotating:	-	01	Position actual value, sign change	Yes	No	-			
Bit	Signal name	1 signal	0 signal	FP															
00	Motor encoder, rotating/linear	Linear	Rotating:	-															
01	Position actual value, sign change	Yes	No	-															
<b>Dependency:</b>	Refer to: p0404, p0410 Refer to: F01671																		
<b>Note:</b>	For safe functions that are not enabled (p9501 = 0), the following applies: - p9516.0 is automatically set the same as p0404.0 when the system boots. - p9516.1 is automatically set the same as p0410.1 when the system boots. For safety functions that are enabled (p9501 > 0), the following applies: - p9516.0 is checked to identify whether it coincides with p0404.0.																		

<b>p9517</b>	<b>SI Motion linear scale grid division (Control Unit) / SI Mtn grid CU</b>			
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [nm]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 250000000.00 [nm]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 10000.00 [nm]	
<b>Description:</b>	Sets the grid division for a linear motor encoder. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.			
<b>Dependency:</b>	Refer to: p0407, p9516 Refer to: F01671			
<b>Note:</b>	For safety functions that have not been enabled (p9501 = 0), the following applies: When booting p9517 is automatically set the same as p0407. For safety functions that are enabled (p9501 > 0), the following applies: p9517 is checked whether it coincides with p0407.			

<b>p9518</b>	<b>SI Motion encoder pulses per revolution (Control Unit) / SI Mtn puls/rev CU</b>			
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 16777215	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 2048	
<b>Description:</b>	Sets the number of encoder pulses per revolution for rotary motor encoders. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.			

**Dependency:** Refer to: p0408, p9516

Refer to: F01671

**Note:** For safety functions that have not been enabled (p9501 = 0), the following applies: When booting, p9518 is automatically set the same as p0408.  
For safety functions that are enabled (p9501 > 0), the following applies: p9518 is checked whether it coincides with p0408.

<b>p9519 SI Motion fine resolution G1_XIST1 (Control Unit) / SI Mtn G1_XIST1 CU</b>			
VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 2	<b>Max</b> 18	<b>Factory setting</b> 11
<b>Description:</b>	Sets the fine resolution for G1_XIST1 in bits. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
<b>Dependency:</b>	Refer to: p0418 Refer to: F01671		
<b>Note:</b>	For safety functions that have not been enabled (p9501 = 0), the following applies: When booting, p9519 is automatically set the same as p0418. For safety functions that are enabled (p9501 > 0), the following applies: p9519 is checked whether it coincides with p0418. G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)		

<b>p9520 SI Motion spindle pitch (Control Unit) / SI Mtn Sp_pitch CU</b>			
VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 0.1000 [mm]	<b>Max</b> 8388.0000 [mm]	<b>Factory setting</b> 10.0000 [mm]
<b>Description:</b>	Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder.		
<b>Notice:</b>	The fourth decimal point can be rounded-off depending on the size of the entered number (from 3 places before the decimal point).		

<b>p9521[0...7] SI Motion gearbox enc (motor)/load denominator (Control Unit) / SI Mtn gear den CU</b>			
VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b> 1	<b>Max</b> 2147000000	<b>Factory setting</b> 1
<b>Description:</b>	Sets the denominator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load.		
<b>Index:</b>	[0] = Gearbox 1 [1] = Gearbox 2 [2] = Gearbox 3 [3] = Gearbox 4 [4] = Gearbox 5 [5] = Gearbox 6 [6] = Gearbox 7 [7] = Gearbox 8		
<b>Dependency:</b>	Refer to: p9522		
<b>Notice:</b>	It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.		

<b>p9522[0...7]</b>	<b>SI Motion gearbox encoder (motor)/load numerator (Control Unit) / SI Mtn gear num CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 2147000000	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1
<b>Description:</b>	Sets the numerator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load.		
<b>Index:</b>	[0] = Gearbox 1 [1] = Gearbox 2 [2] = Gearbox 3 [3] = Gearbox 4 [4] = Gearbox 5 [5] = Gearbox 6 [6] = Gearbox 7 [7] = Gearbox 8		
<b>Dependency:</b>	Refer to: p9521		
<b>Notice:</b>	It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.		
<b>Note:</b>	In the case of encoderless monitoring functions, the pole pair number must be multiplied by the numerator of the gearbox ratio. Example: Gearbox ratio 1:4, pole pair number (r0313) = 2 --> p9521 = 1, p9522 = 8 (4 x 2)		
<b>p9523</b>	<b>SI Motion redundant coarse pos. value valid bits (Control Unit) / Valid bits CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned16 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 16	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 9
<b>Description:</b>	Sets the number of valid bits of the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
<b>Dependency:</b>	Refer to: r0470, p9323		
<b>Note:</b>	For safe functions that are not enabled (p9501 = 0), the following applies: - p9523 is automatically set the same as r0470 when the system boots. For safety functions that are enabled (p9501 > 0), the following applies: - p9523 is checked to see that it matches r0470.		
<b>p9524</b>	<b>SI Motion Redundant coarse pos. value fine resolution bits (CU) / SI Mtn fine bit CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Integer16 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> -16	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 16	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -2
<b>Description:</b>	Sets the number of valid bits for the fine resolution of the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
<b>Dependency:</b>	Refer to: r0471, p9324		

**Note:** For safe functions that are not enabled (p9501 = 0), the following applies:  
 - p9524 is automatically set the same as r0471 when the system boots.  
 For safety functions that are enabled (p9501 > 0), the following applies:  
 - p9524 is checked to see that it matches r0471.

<b>p9525</b>	<b>SI Motion Redundant coarse pos. value relevant bits (CU) / Relevant bits CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned16 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 16	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 16
<b>Description:</b>	Sets the number of relevant bits for the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
<b>Dependency:</b>	Refer to: p0414, r0472, p9325		
<b>Note:</b>	For safe functions that are not enabled (p9501 = 0), the following applies: - p9525 is automatically set the same as r0472 when the system boots. For safety functions that are enabled (p9501 > 0), the following applies: - p9525 is checked to see that it matches r0472.		

<b>p9526</b>	<b>SI Motion encoder assignment second channel / SI Mtn enc chan 2</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 3	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 1
<b>Description:</b>	Sets the number of the encoder that the second channel (control, Motor Module) uses for safe motion monitoring functions.		
<b>Dependency:</b>	For the safe motion monitoring functions, the redundant safety position actual value sensing must be activated in the appropriate encoder data set (p0430.19 = 1). Refer to: p0187, p0188, p0189, p0430		
<b>Note:</b>	For p9526 = 1, the encoder for the closed-loop speed control is used for the second channel of the motion monitoring functions (1-encoder system). A change only becomes effective after a POWER ON.		

<b>p9529</b>	<b>SI Motion Gx_XIST1 coarse pos. safe most significant bit (CU) / Gx_XIST1 MSB CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned16 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 31	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 14
<b>Description:</b>	Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
<b>Dependency:</b>	Refer to: p0415, r0475, p9329		
<b>Note:</b>	For safe functions that are not enabled (p9501 = 0), the following applies: - p9529 is automatically set the same as r0475 when the system boots. For safety functions that are enabled (p9501 > 0), the following applies: - p9529 is checked to see that it matches r0475. MSB: Most Significant Bit		

<b>p9530</b>	<b>SI Motion standstill tolerance (Control Unit) / SI Mtn standst_tol</b>

**Description:**

Assigns the individual cams to the maximum of 4 cam tracks and defines the numerical value for the SGA "cam range".

p9538[0...29] = CBA dec

C = Assignment of the cam to the cam track.

Valid values are 1, 2, 3, 4.

BA = Numerical value for the SGA "cam range".

If the position lies in the range of this cam, the value BA is signaled to the safety-relevant logic via the SGA "cam range" of the cam track set using C.

Valid values are 0 ... 14. Each numerical value may only be used once for each cam track.

Examples:

p9538[0] = 207

Cam 1 (index 0) is assigned cam track 2. If the position lies within the range of this cam, a value of 7 is entered in the SGA "cam range" of the second cam track.

p9538[5] = 100

Cam 6 (index 5) is assigned cam track 1. If the position lies within the range of this cam, a value of 0 is entered in the SGA "cam range" of the first cam track.

**p9572 SI Motion reference position (Control Unit) / SI mtn rel\_pos**

<b>VECTOR_G (Safety rot)</b>	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-737280.000 [°]	737280.000 [°]	0.000 [°]

**Description:** The reference position entered in this parameter, is used as safe absolute position when setting p9573.  
 If errors are identified when performing the plausibility checks, then message C01711 is output with message value 1003

**Note:** The unit depends on the selected axis type, linear or rotary axis, in p9502

---

**p9573 SI Motion accept reference position (Control Unit) / SI mtn set\_ref\_pos**

<b>VECTOR_G</b>	<b>Can be changed:</b> U, T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	122	0

**Description:** The safe absolute position is rejected or newly set using this parameter.  
 If errors are identified when performing the plausibility checks, then message C1711 is output with message value 1003

**Value:** 0: No action  
 89: Set reference position at standstill  
 122: Declare reference position invalid

**Dependency:** Refer to: p9572

---

**p9574 SI Motion safe position scaling (Control Unit) / SI mtn SP scal CU**

<b>VECTOR_G</b>	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	1	100000	1000

**Description:** Sets the scaling factor to transfer the safe position via PROFIsafe in the 16-bit notation.

**Dependency:** Refer to: r9713

**Note:** The parameter is only effective when PROFIsafe telegram 901 is selected.  
 By selecting a suitable scaling of the 32 bit position actual value (r9713[0]), it must be ensured that the scaled position actual value is not greater than 16 bit. The scaling is realized by dividing r9713[0] with this scaling factor.  
 If, during operation, a position actual value is determined, which cannot be scaled to the 16 bits, then message C0711 with value 7001 is output and safety stop response STOP F.

---

**p9580 SI Motion pulse suppression delay bus failure (Control Unit) / SI Mtn t to IL CU**

---

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [ms]	800.00 [ms]	0.00 [ms]

**Description:** Sets the delay time after which the pulses are safely suppressed after a bus failure.

**Dependency:** Refer to: p9561, p9563

**Note:** In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F).

The main use of the wait time is the ESR function (Extended Stop and Retract).

---

**p9581 SI Motion brake ramp reference value (Control Unit) / SI Mtn ramp ref CU**

---

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	600.0000 [mm/min]	240000.0000 [mm/min]	1500.0000 [mm/min]

**Description:** Sets the reference value to define the brake ramp.

The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).

**Dependency:** Refer to: p9582, p9583

---

**p9581 SI Motion brake ramp reference value (Control Unit) / SI Mtn ramp ref CU**

---

VECTOR_G (Safety rot)	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	600.0000 [rpm]	240000.0000 [rpm]	1500.0000 [rpm]

**Description:** Sets the reference value to define the brake ramp.

The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).

**Dependency:** Refer to: p9582, p9583

---

**p9582 SI Motion brake ramp delay time (Control Unit) / SI Mtn rp t\_del CU**

---

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	10.00 [ms]	99000.00 [ms]	250.00 [ms]

**Description:** Sets the delay time for monitoring the brake ramp.

Monitoring of the brake ramp starts once the delay time has elapsed.

**Dependency:** Refer to: p9581, p9583

<b>p9583</b>	<b>SI Motion brake ramp monitoring time (Control Unit) / SI Mtn rp t_mon CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.50 [s]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 3600.00 [s]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 10.00 [s]
<b>Description:</b>	Sets the monitoring time to define the brake ramp. The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).		
<b>Dependency:</b>	Refer to: p9581, p9582		
<b>p9585</b>	<b>SI Motion fault tolerance actual value sensing sensorless (CU) / SI mtn SI to SL CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Integer32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> -1	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 4	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> -1
<b>Description:</b>	Sets the tolerance of the plausibility monitoring of the current and voltage angle p9585 = 4 must be parameterized for synchronous motors.		
<b>Dependency:</b>	Refer to: r9787 Refer to: F01681, C01711		
<b>Notice:</b>	Reducing this value can adversely affect the actual value sensing and the plausibility check. When the value is increased, this results in a longer evaluation delay.		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3). For a value of -1, for synchronous motors, the value 4 is used automatically for the calculation – and for induction motors, the value 0.		
<b>p9586</b>	<b>SI Motion delay time of the evaluation sensorless (CU) / SI Mtn t_del SL CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 5.00 [ms]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1000.00 [ms]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 100.00 [ms]
<b>Description:</b>	Sets the evaluation delay for encoderless actual value sensing after pulse enable. The value should be greater than or equal to the motor magnetizing time.		
<b>Dependency:</b>	Refer to: C01711		
<b>Notice:</b>	If this value is reduced, this can have a negative impact on the actual value acquisition and plausibility check – and result in Safety message C01711 with the message value 1041 or 1042. When the value is increased, this results in a longer evaluation delay.		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).		
<b>p9587</b>	<b>SI Motion act val sensing sensorless filter time (Control Unit) / SI Mtn SL filt CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [ms]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 100.00 [ms]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 25.00 [ms]
<b>Description:</b>	Sets the filter time for smoothing the actual value with sensorless actual value sensing.		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).		

<b>p9588</b>	<b>SI Motion act val sensing sensorless min current (Control Unit) / SI Mtn SL I_min CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [%]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1000.00 [%]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 10.00 [%]
<b>Description:</b>	Sets the minimum current for encoderless actual value sensing in reference to 10 mA (i.e. when 1 % = 10 mA). - The value must be increased if C01711 has occurred with message value 1042. - The value must be decreased if C01711 has occurred with message value 1041.		
<b>Dependency:</b>	Refer to: r9785 Refer to: C01711		
<b>Notice:</b>	Reducing this percentage value can adversely affect actual value sensing.		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).		
<b>p9589</b>	<b>SI Motion voltage tolerance acceleration (Control Unit) / SI Mtn U tol CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 10.00 [%]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 3300.00 [%]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 100.00 [%]
<b>Description:</b>	Sets the voltage tolerance for suppressing acceleration peaks. An increase in this percentage value means that voltage peaks will need to have a higher amplitude when accelerating if they are not to affect actual value sensing. - The value must be increased if C01711 with message value 1043 has occurred. - The value must be lowered if acceleration procedures have led to an excessive Safety actual velocity.		
<b>Dependency:</b>	Refer to: r9784 Refer to: C01711		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

**p9620[0...7] BI: SI signal source for STO (SH)/SBC/SS1 (Control Unit) / SI S\_srcSTO/SS1 CU**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32 / Binary	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2810
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	0

**Description:** Sets the signal source for the following functions on the Control Unit:  
STO: Safe Torque Off / SH: Safe standstill  
SBC: Safe Brake Control  
SS1: Safe Stop 1 (time monitored)

**Dependency:** Refer to: p9601

**Note:** The following signal sources are permitted:  
- fixed zero (standard setting).  
- digital inputs DI 0 ... 7, 16, 17, 20, 21 on the Control Unit 320-2 (CU320-2).  
- digital inputs DI 0 ... 3 on the Controller Extensions (CX32-2, NX10.3, NX15.3).  
- digital inputs DI 0 ... 3, 16 on the Control Unit 310-2 (CU310-2).  
It is not permitted to establish an interconnection to a digital input in the simulation mode.  
For a parallel circuit configuration of n power units, the following applies:  
p9620[0] = Signal source for power unit 1  
...  
p9620[n-1] = Signal source for power unit n

**p9621 BI: SI Safe Brake Adapter signal source (Control Unit) / SI SBA S\_src CU**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32 / Binary	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2814
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	0

**Description:** Sets the signal source for Safe Brake Adapter (SBA).  
This defines via which digital input the Safe Brake Adapter feedback signal is read-in (SBA\_DIAG).  
p9621/p9821 = 0:  
There is no Safe Brake Control (SBC) with Safe Brake Adapter (SBA) available.  
p9621/p9821 = r0722.x (x = 0, 1 ... 7)  
Safe Brake Adapter and Booksize unit (no Communication Interface Module (CIM)).  
p9621/p9821 = r9872.3  
Safe Brake Adapter and Chassis unit (CIM).

**Dependency:** Refer to: p9601, p9602, p9821

**Note:** No difference is tolerated for a crosswise data comparison between p9621 and p9821.  
To use the "Safe Brake Adapter" function the following must apply:  
p9601 = p9801 <> 0 and p9602 = p9802 = 1

**p9622[0...1] SI SBA relay delay times (Control Unit) / SI SBA relay t CU**

VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2814
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [ms]	1000.00 [ms]	[0] 100.00 [ms]
			[1] 65.00 [ms]

**Description:** Sets the delay times for activating and de-activating the Safe Brake Adapter relay.

	The relay-specific minimum delay times for evaluating the feedback signal contacts have to be set. They differ for the activation and de-activation of one and the same relay.
<b>Index:</b>	[0] = Wait time activation [1] = Wait time deactivation
<b>Dependency:</b>	Refer to: p9822
<b>Note:</b>	For a crosswise data comparison between p9622 and p9822, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. The relay-specific minimum delay times (ms) for evaluating the feedback signal contacts are entered.

<b>p9650</b>	<b>SI SGE changeover tolerance time (Control Unit) / SI SGE_chg tol CU</b>		
VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2810
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [ms]	2000.00 [ms]	500.00 [ms]
<b>Description:</b>	Sets the tolerance time to change over the safety-related inputs (SGE) on the Control Unit. An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a crosswise data comparison during this tolerance time.		
<b>Dependency:</b>	Refer to: p9850		
<b>Note:</b>	For a crosswise data comparison between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. SGE: Safety-related input (e.g. STO terminals)		

<b>p9651</b>	<b>SI STO/SBC/SS1 debounce time (Control Unit) / SI STO t_debou CU</b>

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [ms]	100.00 [ms]	0.00 [ms]
<b>Description:</b>	Sets the debounce time for the failsafe digital inputs used to control STO/SBC/SS1.		
<b>Note:</b>	The debounce time is rounded to whole milliseconds. It specifies the maximum duration of a fault pulse at the fail-safe digital inputs with no reaction/influence on the selection or deselection of the Safety Basic Functions. Example: Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed. Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.		

<b>p9652</b>	<b>SI Safe Stop 1 delay time (Control Unit) / SI Stop 1 t_del CU</b>

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0.00 [s]	300.00 [s]	0.00 [s]
<b>Description:</b>	Sets the delay time of the pulse suppression for the function "Safe Stop 1" (SS1) on the Control Unit to brake along the OFF3 down ramp (p1135).		
<b>Recommend.:</b>	In order that the drive can completely ramp-down along the OFF3 ramp and a motor holding brake that is possibly available can close, then the delay time should be set as follows: Motor holding brake parameterized: delay time $\geq$ p1135 + p1228 + p1217 Motor holding brake not parameterized: delay time $\geq$ p1135 + p1228		
<b>Dependency:</b>	Refer to: p1135, p9852		

**Note:** For a crosswise data comparison between p9652 and p9852, a difference of one Safety monitoring clock cycle is tolerated.  
The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle.  
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

<b>p9653</b>	<b>SI Safe Stop 1 drive-based braking response / SI SS1 OFF3</b>

<b>Bit field:</b>	<b>Bit</b>	<b>Signal name</b>	<b>1 signal</b>	<b>0 signal</b>	<b>FP</b>
	00	De-select SOS/SLS (SBH/SG)	Yes	No	-
	01	De-select SOS (SBH)	Yes	No	-
	03	Select SLS (SG) bit 0	Set	Not set	-
	04	Select SLS (SG) bit 1	Set	Not set	-
	05	Deselect SDI positive	Yes	No	-
	06	Deselect SDI negative	Yes	No	-
	07	Deselect SLP	Yes	No	-
	08	Gearbox selection, bit 0	Set	Not set	-
	09	Gearbox selection, bit 1	Set	Not set	-
	10	Gearbox selection, bit 2	Set	Not set	-
	12	Select SLP (SE) position range	SLP2 (SE2)	SLP1 (SE1)	-

13	Close brake from control	Yes	No	-
15	Select test stop	Yes	No	-
16	SGE valid	Yes	No	-
18	De-select external STOP A	Yes	No	-
19	De-select external STOP C	Yes	No	-
20	De-select external STOP D	Yes	No	-
21	De-select external STOP E	Yes	No	-
28	SLS (SG) override bit 0	Set	Not set	-
29	SLS (SG) override bit 1	Set	Not set	-
30	SLS (SG) override bit 2	Set	Not set	-
31	SLS (SG) override bit 3	Set	Not set	-

**Note:**

Re r9719.0 and r9719.1:

These two bits must be considered together.

- if SOS/SLS (SBH/SG) is de-selected using bit 0, then assignment of bit 1 is irrelevant.

- if SOS/SLS (SBH/SG) is selected using bit 0, then a changeover is made between SOS (SBH) and SLS (SG) using bit 1.

SLP: Safely-Limited Position / SE: Safe software limit switches

SLS: Safely-Limited Speed / SG: Safely reduced speed

SOS: Safe Operating Stop / SBH: Safe operating stop

SDI: Safe Direction (safe motion direction)

<b>r9730</b>	<b>SI Motion Safe maximum velocity / SI mtn safe v_Max</b>		
VECTOR_G	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [mm/min]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> - [mm/min]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> - [mm/min]
<b>Description:</b>	Displays the safe maximum velocity (on the load side) that is permissible for the safe motion monitoring functions as a result of the actual value sensing. This parameter indicates up to which load velocity the safe encoder actual values (redundant encoder coarse position) can still be correctly detected as a result of the particular encoder parameterization. This parameter is only of significance for enabled safety with encoder (otherwise "0").		
<b>Note:</b>	If the value displayed is exceeded, message C01711 is output indicating relevant subsequent faults.		
<b>r9730</b>	<b>SI Motion Safe maximum velocity / SI mtn safe v_Max</b>		
VECTOR_G (Safety rot)	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [rpm]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> - [rpm]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> - [rpm]
<b>Description:</b>	Displays the safe maximum velocity (on the load side) that is permissible for the safe motion monitoring functions as a result of the actual value sensing. This parameter indicates up to which load velocity the safe encoder actual values (redundant encoder coarse position) can still be correctly detected as a result of the particular encoder parameterization. This parameter is only of significance for enabled safety with encoder (otherwise "0").		
<b>Note:</b>	If the value displayed is exceeded, message C01711 is output indicating relevant subsequent faults.		
<b>r9731</b>	<b>SI Motion safe position accuracy / SI Mtn pos acc</b>		
VECTOR_G	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [mm]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> - [mm]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> - [mm]
<b>Description:</b>	Displays the safe position accuracy (load side). As a result of the actual value sensing for safe motion monitoring functions, this accuracy can be achieved as the maximum.		
<b>Note:</b>	The parameter is only of significance for enabled safety with encoder (otherwise "0").		
<b>r9731</b>	<b>SI Motion safe position accuracy / SI Mtn pos acc</b>		
VECTOR_G (Safety rot)	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [°]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> - [°]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> - [°]
<b>Description:</b>	Displays the safe position accuracy (load side). As a result of the actual value sensing for safe motion monitoring functions, this accuracy can be achieved as the maximum.		
<b>Note:</b>	The parameter is only of significance for enabled safety with encoder (otherwise "0").		

<b>r9732</b>	<b>SI Motion velocity resolution / SI Mtn v_res</b>		
VECTOR_G	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [mm/min]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> - [mm/min]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> - [mm/min]
<b>Description:</b>	Displays the safe velocity resolution (load side). Setpoints for velocity limits or parameter changes for velocities below this threshold have no effect.		
<b>Note:</b>	This parameter does not provide any information about the actual accuracy of the velocity sensing. This depends on the type of actual value sensing, the gear factors as well as the quality of the encoder being used.		
<b>r9732</b>	<b>SI Motion velocity resolution / SI Mtn v_res</b>		
VECTOR_G (Safety rot)	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [rpm]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> - [rpm]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> - [rpm]
<b>Description:</b>	Displays the safe velocity resolution (load side). Setpoints for velocity limits or parameter changes for velocities below this threshold have no effect.		
<b>Note:</b>	This parameter does not provide any information about the actual accuracy of the velocity sensing. This depends on the type of actual value sensing, the gear factors as well as the quality of the encoder being used.		
<b>r9733[0...2]</b>	<b>CO: SI Motion setpoint speed limit effective / SI Mtn setp_lim</b>		
VECTOR_G	<b>Can be changed:</b> - <b>Data type:</b> FloatingPoint32  <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> - [rpm]	<b>Calculated:</b> - <b>Dynamic index:</b> -  <b>Units group:</b> 3_1 <b>Scaling:</b> p2000 <b>Max</b> - [rpm]	<b>Access level:</b> 3 <b>Func. diagram:</b> 2820, 2861, 3630 <b>Unit selection:</b> p0505 <b>Expert list:</b> 1 <b>Factory setting</b> - [rpm]
<b>Description:</b>	Displays the necessary setpoint speed limit as a result of the selected motion monitoring functions. Contrary to the parameterization of the SI limit values, this parameter specifies the motor-side limit value and not the load-side limit value.		
<b>Recommend.:</b>	For the ramp-function generator, by appropriately interconnecting the speed limits p1051 and p1052 with r9733[0, 1], a drive-based setpoint velocity limiting can be realized. - CI: p1051 = r9733[0] - CI: p1052 = r9733[1] Additional limiting can also be activated using connector input p1085 and p1088.		
<b>Index:</b>	[0] = Setpoint limiting positive [1] = Setpoint limiting negative [2] = Setpoint limit absolute		
<b>Dependency:</b>	For SLS: r9733[0] = p9531[x] x p9533 (converted from the load side to the motor side) For SDI negative: r9733[0] = 0 For SLS: r9733[1] = - p9531[x] x p9533 (converted from the load side to the motor side) For SDI positive: r9733[1] = 0 [x] = Selected SLS stage Conversion factor from the motor side to the load side: - motor type = rotary and axis type = linear: p9522 / (p9521 x p9520) - otherwise: p9522 / p9521 Refer to: p9531, p9533		

**Notice:** If p1051 = r9733[0] is interconnected, p1052 = r9733[1] must also be interconnected and vice versa.

If only the absolute value of the setpoint velocity limiting is required, r9733[2] must be interconnected.

**Note:** The unit changeover between linear and rotary axis is not implemented via the safety changeover (p9502) but by the linear motor changeover.

If the "SLS" or "SDI" function is not selected, r9733[0] shows p1082 and r9733[1] shows -p1082.

The display in r9733 can be delayed by up to one Safety monitoring clock cycle as compared to the display in r9719/r9720 and r9721/r9722.

**r9734.0...15****CO/BO: SI Motion Safety Info Channel status word / SI Mtn info ch ZSW**

Description:	Displays the Safety Integrated monitoring functions supported on the Control Unit and Motor Module. The Control Unit determines this display.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO supported via terminals	Yes	No	2804
	01	SBC supported	Yes	No	2804
	02	Extended Functions supported (p9501 > 0)	Yes	No	2804
	03	SS1 supported	Yes	No	2804
	04	Extended Functions PROFIsafe supported	Yes	No	-
	05	Extended Functions integrated in drive supported (p9601.2 = 1)	Yes	No	-
	06	Basic Functions PROFIsafe supported	Yes	No	-
	07	Extended Functions encoderless supported	Yes	No	-
	08	Safe Brake Adapter supported	Yes	No	-

09	Basic Functions PROFIsafe for parallel connection supported	Yes	No	-
10	Extended Functions integrated in drive for parallel connection	Yes	No	-
11	Extended Functions SDI supported	Yes	No	-
12	Extended Functions SSM encoderless supported	Yes	No	-
13	ESR delay of the pulse suppression	Yes	No	-
14	SBC for parallel connection supported	Yes	No	-
15	SLS limit, SP supported via PROFIsafe	Yes	No	-
16	Safety functions w/out selection, SLP, SS1 supported w/out OFF3	Yes	No	-

**Dependency:**

Refer to: r9871

**Note:**

CU: Control Unit

SBC: Safe Brake Control

SDI: Safe Direction (safe motion direction)

SLP: Safely-Limited Position

SI: Safety Integrated

SP: Safe Position

SS1: Safe Stop 1

STO: Safe Torque Off / SH: Safe standstill

SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) / SGA n &lt; nx: Safety-related output n &lt; nx

ESR: Extended Stop and Retract

**r9772.0...23****CO/BO: SI status (Control Unit) / SI status CU**

VECTOR\_G

-

-

-

**Description:**

Displays the Safety Integrated status on the Control Unit.

**Bit field:**

Bit	Signal name	1 signal	0 signal	FP
00	STO or safe pulse cancellation on CU selected	Yes	No	2810
01	STO or safe pulse cancellation on CU active	Yes	No	2810
02	SS1 delay time active on the Control Unit	Yes	No	2810
04	SBC requested	Yes	No	2814
05	SS1 selected on the Control Unit (Basic Functions)	Yes	No	-
06	SS1 active on the Control Unit (Basic Functions)	Yes	No	-
09	STOP A cannot be acknowledged, active	Yes	No	2802
10	STOP A active	Yes	No	2802
15	STOP F active	Yes	No	2802
16	STO cause: Safety comm. mode	Yes	No	-
17	STO cause selection via terminal (Basic Functions)	Yes	No	-
18	STO cause selection via Safe Motion Monitoring (SMM)	Yes	No	-
19	STO cause actual value missing or safe pulse cancellation	Yes	No	-
20	STO cause selection PROFIsafe (Basic Functions)	Yes	No	-
22	SS1 cause selection terminal (Basic Functions)	Yes	No	-
23	SS1 cause selection PROFIsafe (Basic Functions)	Yes	No	-

**Dependency:** Refer to: r9872

**Note:** Re bit 00:  
When STO or "Safe pulse cancellation" is selected, the cause is displayed in bits 16 ... 20.  
Re bit 01:  
- For p9772.1 = 1 and p9772.19 = 0, an STO from the Safety Basic functions is active.  
- For p9772.1 = 1 and p9772.19 = 1, safe pulse cancellation is active, if safety functions without selection are activated via p9601.2/p9801.2 = 1 and p9601.5/p9801.5 = 1.  
Note:  
If p9601.0 = 1 and p9601.2 = 1 and p9801.5 = 1 then for bit 0 and 1, the STO function applies.  
Re bit 05:  
When SS1 is selected, the cause is displayed in bits 22 and 23.  
Re bit 18:  
When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).  
Re bit 19:  
With SMM encoderless no actual value sensing is possible on account of OFF2.  
With SMM with encoder no actual value sensing is possible on account of parking.  
For Safety functions without selection, safe pulse cancellation to selected (p9772.19 = 1).  
SMM: Safe Motion Monitoring  
Re bit 22 and 23:  
These bits show via which path the SS1 has been triggered, i.e. what has started the SS1 delay time.  
If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

#### r9773.0...31 CO/BO: SI status (Control Unit + Motor Module) / SI status CU+MM

<b>VECTOR_G</b>	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 2
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2804
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the Safety Integrated status on the drive (Control Unit + Motor Module).

<b>Bit field:</b>	<b>Bit</b>	<b>Signal name</b>	<b>1 signal</b>	<b>0 signal</b>	<b>FP</b>
	00	STO selected in drive	Yes	No	2804
	01	STO active in drive	Yes	No	2804
	02	SS1 delay time active in the drive	Yes	No	2804
	04	SBC requested	Yes	No	2804
	05	SS1 selected in the drive (Basic Functions)	Yes	No	-
	06	SS1 active in the drive (Basic Functions)	Yes	No	-
	31	Shutdown paths must be tested	Yes	No	2810

**Note:** This status is formed from the AND operation of the relevant status of the two monitoring channels.

#### r9774.0...31 CO/BO: SI status (group STO) / SI stat group STO

<b>VECTOR_G</b>	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 2
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2804
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the status for Safety Integrated of the group to which this drive belongs.

These signals are an AND logic operation of the individual status signals of the drives included in this group.

<b>Bit field:</b>	<b>Bit</b>	<b>Signal name</b>	<b>1 signal</b>	<b>0 signal</b>	<b>FP</b>
	00	STO selected in group	Yes	No	2804
	01	STO active in group	Yes	No	2804
	02	SS1 delay time active in group	Yes	No	-

04	SBC requested in group	Yes	No	2804
05	SS1 selected in group (Basic Functions)	Yes	No	-
06	SS1 active in group (Basic Functions)	Yes	No	-
31	Shutdown paths of the group must be tested	Yes	No	2804

**Dependency:** Refer to: p9620, r9773

**Notice:** If a drive belonging to a group is de-activated via p0105, then the signals in r9774 can no longer be correctly displayed (Remedy: Before de-activating, remove this drive from the group).

**Note:** A group is formed by appropriately grouping the terminals for the function "Safe Torque Off" (STO).  
The status of a group of n drives is, for drives 1 to n - 1 displayed with a delay of one monitoring clock cycle; this is a system-related effect.

<b>Description:</b>	Sets the field-generating current for sensorless actual value sensing of synchronous motors. For synchronous motors, this current is fed in using sensorless safety functions. The value must fulfill the following condition: $ p0305 \times p9783  \geq p9588 \times 1.2$		
<b>Dependency:</b>	Refer to: p9588 Refer to: C01711		
<b>Notice:</b>	Reducing this percentage value can adversely affect actual value sensing with synchronous motors. If the value is increased, this results in an increased motor power loss.		
<b>Note:</b>	This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

<b>Description:</b>	<p>Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Motor Module.</p> <p>Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used:</p> <p>0000 hex: Safety functions integrated in the drive inhibited (no safety function).</p> <p>0001 hex: Basic functions are enabled via onboard terminals (permissible for r9871.0 = 1).</p> <p>0004 hex: Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9871.5 = 1).</p> <p>0005 hex: Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9871.5 = 1).</p> <p>0008 hex: Basic functions are enabled via PROFIsafe (permissible for r9871.6 = 1).</p> <p>0009 hex: Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9871.6 = 1).</p> <p>000C hex: Extended functions are enabled via PROFIsafe (permissible for r9871.4 = 1).</p> <p>000D hex: Extended functions are enabled via PROFIsafe and basic functions via onboard terminals (permissible for r9871.4 = 1).</p>		

0024 hex:

Extended functions without selection are enabled (permissible for r9871.16 = 1).

0025 hex:

Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9871.16 = 1).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO (SH) via terminals (Motor Module) enable	Enable	Inhibit	2810
	02	Enable drive_integr motion_monitoring functions (Motor Module)	Enable	Inhibit	-
	03	PROFIsafe (Motor Module) enable	Enable	Inhibit	-
	05	Enable drv_integ motion_mon fct w/o selection (Motor Module)	Enable	Inhibit	-

**Dependency:** Refer to: p9601, r9871

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** MM: Motor Module.

SI: Safety Integrated.

SMM: Safe Motion Monitoring.

STO: Safe Torque Off/SH: Safe standstill.

SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204).

F-DI: Failsafe Digital Input.

F-DO: Failsafe Digital Output.

A change always becomes effective only after a POWER ON. Exception: Changes to p9801.0 become effective immediately.

<b>p9802</b>	<b>SI enable Safe Brake Control (Motor Module) / SI enable SBC MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2814
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	1	0
<b>Description:</b>	Sets the enable signal for the "Safe Brake Control" function (SBC) on the Motor Module. 0: Inhibit SBC 1: Enable SBC		
<b>Dependency:</b>	Refer to: p9602		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9801 not equal to 0). It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake. The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical. It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1). MM: Motor Module SBC: Safe Brake Control SI: Safety Integrated

<b>Description:</b>	Sets the PROFIsafe telegram number for the Motor Module.		
<b>Value:</b>	0: No PROFIsafe telegram selected 30: PROFIsafe standard telegram 30, PZD-1/1 31: PROFIsafe standard telegram 31, PZD-2/2 901: PROFIsafe SIEMENS telegram 901, PZD-3/5 902: PROFIsafe SIEMENS telegram 902, PZD-3/6 998: Compatibility mode (as for firmware version < 4.5)		
<b>Dependency:</b>	Refer to: p9611, p60022		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>p9821</b>	<b>BI: SI Safe Brake Adapter signal source (Motor Module) / SI SBA S_src MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> Unsigned32 / Binary <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> 2814 <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0
<b>Description:</b>	Sets the signal source for Safe Brake Adapter (SBA). This defines via which digital input the Safe Brake Adapter feedback signal is read-in (SBA_DIAG). p9621/p9821 = 0: There is no Safe Brake Control (SBC) with Safe Brake Adapter (SBA) available. p9621/p9821 = r0722.x (x = 0, 1 ... 7) Safe Brake Adapter and Booksize unit (no Communication Interface Module (CIM)). p9621/p9821 = r9872.3 Safe Brake Adapter and Chassis unit (CIM).		
<b>Dependency:</b>	Refer to: p9601, p9602, p9621		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	No difference is tolerated for a crosswise data comparison between p9621 and p9821. To use the "Safe Brake Adapter" function the following must apply: p9601 = p9801 <> 0 and p9602 = p9802 = 1		

<b>p9822[0...1]</b>	<b>SI SBA relay delay times (Motor Module) / SI SBA relay t MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [µs]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 1000000.00 [µs]	<b>Access level:</b> 3 <b>Func. diagram:</b> 2814 <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> [0] 100000.00 [µs] [1] 65000.00 [µs]
<b>Description:</b>	Sets the delay times for activating and de-activating the Safe Brake Adapter relay. The relay-specific minimum delay times for evaluating the feedback signal contacts have to be set. They differ for the activation and de-activation of one and the same relay.		
<b>Index:</b>	[0] = Wait time activation [1] = Wait time deactivation		
<b>Dependency:</b>	Refer to: p9622		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>p9850</b>	<b>SI SGE changeover tolerance time (Motor Module) / SI SGE_chg tol MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [µs]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 2000000.00 [µs]	<b>Access level:</b> 3 <b>Func. diagram:</b> 2810 <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 500000.00 [µs]
<b>Description:</b>	Sets the tolerance time to change over the safety-related inputs (SGE) on the Motor Module. An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a crosswise data comparison during this tolerance time.		
<b>Dependency:</b>	Refer to: p9650		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	For a crosswise data comparison between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. SGE: Safety-related input (e.g. STO terminals)		
<b>p9851</b>	<b>SI STO/SBC/SS1 debounce time (Motor Module) / SI STO t_debou MM</b>		
VECTOR_G	<b>Can be changed:</b> C2(95) <b>Data type:</b> FloatingPoint32 <b>P-Group:</b> Safety Integrated <b>Not for motor type:</b> - <b>Min</b> 0.00 [µs]	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> - <b>Max</b> 100000.00 [µs]	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1 <b>Factory setting</b> 0.00 [µs]
<b>Description:</b>	Sets the debounce time for the EP terminal of the Motor Module.		
<b>Notice:</b>	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
<b>Note:</b>	The debounce time is rounded to whole milliseconds. It specifies the maximum duration of a fault pulse at the fail-safe digital inputs with no reaction/influence on the selection or deselection of the Safety Basic Functions. Example: Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed. Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.		

<b>p9852</b>	<b>SI Safe Stop 1 delay time (Motor Module) / SI Stop 1 t_del MM</b>

**r9872.0...24 CO/BO: SI status list (Motor Module) / SI status MM**

VECTOR_G	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 2
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2804
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the Safety Integrated status on the Motor Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO on Motor Module selected	Yes	No	2810
	01	STO on Motor Module active	Yes	No	2810
	02	SS1 delay time on Motor Module active	Yes	No	2810
	03	Safe Brake Adapter feedback signal	Yes	No	2814
	04	SBC requested	Yes	No	2814
	05	SS1 selected on the Motor Module (Basic Functions)	Yes	No	-
	06	SS1 active on the Motor Module (Basic Functions)	Yes	No	-
	09	STOP A cannot be acknowledged, active	Yes	No	2802
	10	STOP A active	Yes	No	2802
	15	STOP F active	Yes	No	2802
	16	STO cause: Safety comm. mode	Yes	No	-
	17	STO cause selection via terminal (Basic Functions)	Yes	No	-
	18	STO cause: selection via SMM	Yes	No	-
	20	STO cause selection PROFIsafe (Basic Functions)	Yes	No	-
	22	SS1 cause selection terminal (Basic Functions)	Yes	No	-
	23	SS1 cause selection PROFIsafe (Basic Functions)	Yes	No	-
	24	Slave Motor Module ready for communication	Yes	No	-

**Dependency:** Refer to: r9772

**Notice:** If communication between the Control Unit and the Motor Module is interrupted (e.g. by switching off the Motor Module), this display parameter is no longer updated. The last transferred status of the Motor Module is displayed.

**Note:** Re bit 00:  
When STO is selected, the cause is displayed in bits 16 ... 18 and in bit 20.  
Re bit 05:  
When SS1 is selected, the cause is displayed in bits 22 and 23.  
Re bit 18:  
When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).  
SMM: Safe Motion Monitoring  
Re bit 22, 23:  
These bits show via which path the SS1 was triggered, i.e. what has started the SS1 delay time.  
If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.  
Re bit 24:  
Only for parallel connection and active motion monitoring functions: Slave Motor Module ready for communication

---

0000 hex

**Description:**

Sets the target topology of the drive unit.

The target topology is sub-divided into several sections. Each of the following data is saved under an index.

General data on the topology:

- version
- attribute to compare the actual topology and target topology
- number of components

Data on a component:

- type component of the Node Identifier of the component
- number of DRIVE-CLiQ sockets in the Node Identifier
- manufacturer and version of the Node Identifier
- serial number of the Node Identifier (4 indices)
- index of the component
- order number (8 indices)
- attribute to compare the actual topology and target topology of the component
- component number
- number of port types
- port type
- number of ports of the port type
- component number of the associated/linked component
- number of the associated/linked port
- component number of the associated/linked component
- number of the associated port, etc.

Data on the next component:

- etc.

**Dependency:**

Refer to: p9902

**Note:**

The target topology can only be modified using the commissioning software.

The parameter is not displayed for the STARTER commissioning software.

Changes only become effective when the state of p0009 = 101 changes to 0 or 111.

**p9904**CU\_G130\_DP,  
CU\_G130\_PN,  
CU\_G150\_DP,

**Access level:** 3**Func. diagram:** -**Unit selection:** -**Expert list:** 1**Factory setting**

0000 hex

**Description:**

If, when comparing the actual topology and target topology, only error has occurred, that can be acknowledged, then using this parameter, a new comparison can be started - acknowledging the error in the target topology.

Differences that can be acknowledged:

- topology comparison, component shifted
- topology comparison, serial number of a component has been detected to be different (byte 3 = 1)
- topology comparison shows one component that is connected differently

The following parameter values are available:

p9904 = 1 --> the procedure is started.

p9904 = 0 after starting --> the procedure has been successfully completed.

p9904 = 1 after starting --> the procedure has not been successfully completed.

The possible causes for an unsuccessful procedure are located in bytes 4, 3, 2.

Byte 2:

Number of structural differences.

Byte 3:

Number of differences that can be acknowledged (p9904).

Byte 4:

Number of differences. These differences can be resolved as follows:

- sets the topology comparison (p9906 or p9907/p9908).

- change over the actual topology.

The appropriate action should be selected corresponding to the message that is displayed/output.

**Note:** In order to permanently accept the acknowledgement of the fault that can be resolved, then it must be saved in a non-volatile fashion (p0977).

<b>p9905</b>	<b>Device specialization / Specialization</b>

0

99

0

**Description:**

Sets the type of comparison of a component in the target topology with the actual topology.  
The comparison is started by setting the required value.

**Value:**

- 0: High: Compares the complete electronic rating plate
- 1: Average: Compares the component type and the Order number
- 2: Low: Compares the component type
- 3: Minimum: Compares the component class
- 99: Topology has different comparison stages

**Dependency:**

Refer to: p9907

**Note:**

The electronic rating plate comprises the following data:

- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:

p9908 = 0: Component type, Order No., Hardware version, Manufacturer, Serial No.

p9908 = 1: Component type, Order No.

p9908 = 2: Component type

p9908 = 3: Component class (e.g. Sensor Module or Motor Module)

<b>p9909</b>	<b>Topology comparison, component replacement / Topo_cmpr replace</b>

-

-

-

**Description:**

Enters the license key for this drive unit.

Example of the license key:

EACZ-QBCA = 69 65 67 90 45 81 66 67 65 dec (ASCII characters)

Index 0 = license key character 1 (e.g. 69 dec)

Index 1 = license key character 2 (e.g. 65 dec)

...

Index 8 = license key character 9 (e.g. 65 dec)

Index 9 = license key character 10 (e.g. 0 dec)

...

**Dependency:**

Refer to: r7843, p9921

Refer to: A13000, A13001, F13010

**Notice:**

An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

With the STARTER commissioning software, ASCII characters are not entered coded, i.e. the characters of the license key can be entered as printed in the Certificate of License. In this case, STARTER codes the characters.

**Note:**

For an invalid license key, all the indices have the value 0 dec.

Only the ASCII characters contained in a license key can be entered ("1" to "9", "A" to "H", "K" to "N", "P" to "Z" as well as "-").

When manually changing p9920[x] to the value 0 dec, all the values of all the following indices are also set to 0 dec.

After entering the license key, the license key must be activated (p9921).

If the licensing is not adequate, then the following alarm is displayed together with LED:

- A13000 --&gt; licensing not sufficient

- LED READY --&gt; flashes green/red with 0.5 Hz

---

0

1

0

**Description:**

Activates the entered license key.

The following is executed when activating the license key.

- the checksum of the entered license key is checked.

- the entered license key is saved in a non-volatile fashion on the memory card.
- re-enter the license key.

**Value:** 0: Inactive  
1: Activate start license key

**Dependency:** Refer to: p9920  
Refer to: A13000, A13001, F13010

**Note:** Before activation, the license key entered using parameter p9920 is checked. If this check identifies an error, activation is rejected. In this case, writing a 1 to p9921 is rejected.  
When the license key has been activated, p9921 is automatically set to 0.

**Dependency:** Refer to: r7901, r9975, r9980  
Refer to: F01054

**Note:** The corresponding sampling times can be read out in parameter r7901.  
 Net utilization:  
 Computing time load that is only called by the sampling time involved.  
 Total utilization:  
 Computing time load of sampling time involved including load from higher-priority sampling times (interrupts).

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	1	1
<b>Description:</b>	Sets the operating mode for the Terminal Module 54F (TM54F).		
<b>Value:</b>	0: Function interface 1: Control interface		
<b>Note:</b>	Parameter being prepared. For this firmware version, the function interface is not supported.		
<b>p10009</b>	<b>SI SLP retract F-DI / SI SLP retr F-DI</b>		
TM54F_MA, TM54F_SL	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Integer16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	10	0
<b>Description:</b>	Selects a fail-safe digital input for the "Retract SLP" function. A rising edge at this FDI makes it possible to retract the axes, which at this instant in time indicate a violation of the SLP limit. After safe acknowledgment of the active safety faults, the axes can be traversed in the direction of the permitted position range. In the retract mode, SLP becomes inactive, and SDI, if enabled, is selected in the direction of the permitted position range. A 0 signal at the F-DI for retraction deactivates the active retract mode. (SLP becomes active again and SDI corresponds to the actual F-DIs that have been selected.)		
<b>Value:</b>	0: Function inactive 1: F-DI 0 (X521.2/3/6) 2: F-DI 1 (X521.4/5/7) 3: F-DI 2 (X522.1/2/7) 4: F-DI 3 (X522.3/4/8) 5: F-DI 4 (X522.5/6/9) 6: F-DI 5 (X531.2/3/6) 7: F-DI 6 (X531.4/5/7) 8: F-DI 7 (X532.1/2/7) 9: F-DI 8 (X532.3/4/8) 10: F-DI 9 (X532.5/6/9)		

**Note:**

- Retraction is only possible, if SDI in the opposite direction of the permitted position range is not already selected.
- A discrepancy at this F-DI must be acknowledged using a safe acknowledgment.

F-DI: Failsafe Digital Input  
SDI: Safe Direction (safe motion direction)  
SLP: Safely-Limited Position

---

**p10010[0...5] SI drive object assignment / SI drv\_obj assign**

TM54F_MA, TM54F_SL	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3

<b>p10017</b>		<b>SI digital inputs debounce time / SI DI t_debounce</b>	
TM54F_MA, TM54F_SL	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> FloatingPoint32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	1.00 [ms]	100.00 [ms]	1.00 [ms]
<b>Description:</b>	Sets the debounce time for digital inputs. The debounce time is accepted rounded off to whole milliseconds.		

The debounce time acts on the following digital inputs:

- Fail-safe digital inputs (F-DI).
- Single-channel digital inputs (DI).

**Note:**

Example:

Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed.

Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.

The debounce result can be read in r10051.

	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>		
	-	-	-		
<b>Description:</b>	Displays the single-channel, logical, and debounced status of the safety digital inputs F-DI 0 ... 9 at Terminal Module 54F (TM54F).				
<b>Bit field:</b>	<b>Bit</b>	<b>Signal name</b>	<b>1 signal</b>	<b>0 signal</b>	<b>FP</b>
	00	F-DI 0	Logical 1	Logical 0	2850
	01	F-DI 1	Logical 1	Logical 0	2850
	02	F-DI 2	Logical 1	Logical 0	2850
	03	F-DI 3	Logical 1	Logical 0	2850
	04	F-DI 4	Logical 1	Logical 0	2850
	05	F-DI 5	Logical 1	Logical 0	2851
	06	F-DI 6	Logical 1	Logical 0	2851
	07	F-DI 7	Logical 1	Logical 0	2851
	08	F-DI 8	Logical 1	Logical 0	2851
	09	F-DI 9	Logical 1	Logical 0	2851
<b>Dependency:</b>	Refer to: p10017, p10040				
<b>Note:</b>	If a safety function is assigned to an input (e.g. via p10022), then the following applies: - logical "0": Safety function is selected - logical "1": Safety function is de-selected  The interrelationship between the logical level and the external voltage level at the input depends on the parameterization (refer to p10040) of the input as either NC or NO contact and is aligned to the use of a safety function:  With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.  This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, de-selects the safety function.  With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.  This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V de-selects the safety function.  F-DI: Failsafe Digital Input

	03	DO 3	High	Low	2853
<b>Note:</b>	F-DO: Failsafe Digital Output				

**r10053.0...3 CO/BO: SI digital inputs 20 ... 23 status / SI DI 20...23 stat**

TM54F_SL	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2848
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the status of the digital inputs at the Terminal Module 54F (TM54F).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 20	High	Low	2853
	01	DI 21	High	Low	2853
	02	DI 22	High	Low	2853
	03	DI 23	High	Low	2853

**r10054 SI TM54F failsafe events active / SI failsafe act**

TM54F_MA, TM54F_SL	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the events that lead to the transfer of failsafe signals to all drives assigned to the TM54F. If the second channel of the TM54F transmits failsafe signals, then these are synchronized to the other channel.

Possibilities of resolving the situation:

- error during test stop: correctly perform the test stop.
- internal software error: no possibility of resolving this problem, POWER ON.
- internal synchronization problem: no possibility of resolving this problem, POWER ON.
- all other causes: remove the cause of the error and carry out a safety-relevant acknowledgement (p10006).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Commissioning mode active (p0010 = 95)	Yes	No	2847
	01	Checksum error of the safety parameters	Yes	No	-
	02	Internal synchronization problem within TM54F	Yes	No	-
	03	Internal software error	Yes	No	-
	04	Overvoltage in the TM54F	Yes	No	-
	05	Undervoltage in the TM54F	Yes	No	-
	06	Error at test stop	Yes	No	-
	07	Error for crosswise data comparison within TM54F	Yes	No	-
	08	Overtemperature in the TM54F	Yes	No	-
	31	Failsafe events active on another channel	Yes	No	-

**r10055 SI TM54F communication status drive-specific / SI comm\_stat drv**

TM54F_MA, TM54F_SL	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2846
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the communication status of the individual drives with the the Terminal Module 54F (TM54F).

For r10055 = 0, the following applies:

All drives assigned in p10010 communicate with the TM54F.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Communication between drive 1 and TM54F	Not configured	Configured	-
	01	Communication between drive 2 and TM54F	Not configured	Configured	-
	02	Communication between drive 3 and TM54F	Not configured	Configured	-
	03	Communication between drive 4 and TM54F	Not configured	Configured	-
	04	Communication between drive 5 and TM54F	Not configured	Configured	-
	05	Communication between drive 6 and TM54F	Not configured	Configured	-

---

**r10056.0 CO/BO: SI Status / SI stat**

TM54F_MA	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the status of the Terminal Module 54F (TM54F).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Test stop status	Active	Inactive	-

---

**p10061 SI password input TM54F / SI password inp**

TM54F_MA, TM54F_SL	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2847
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0000 hex	FFFF FFFF hex	0000 hex

**Description:** Enters the Safety Integrated password for the Terminal Module 54F (TM54F).  
This password is required to change the safety-relevant parameters.

---

**p10062 SI password new TM54F / SI password new**

TM54F_MA, TM54F_SL	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2847
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0000 hex	FFFF FFFF hex	0000 hex

**Description:** Enters the new Safety Integrated password for the Terminal Module 54F (TM54F).

**Dependency:** A change made to the Safety Integrated password must be acknowledged in the following parameter:  
Refer to: p10063

---

**p10063 SI password acknowledgement TM54F / SI ackn password**

TM54F_MA, TM54F_SL	<b>Can be changed:</b> C2(95)	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned32	<b>Dynamic index:</b> -	<b>Func. diagram:</b> 2847
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0000 hex	FFFF FFFF hex	0000 hex

**Description:** Acknowledgement of the new Safety Integrated password for the Terminal Module 54F (TM54F).

**Dependency:** Refer to: p10062

**Note:** The new password entered into p10062 must be re-entered in order to acknowledge.  
p10062 = p10063 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.

---

### r10090[0...3] SI TM54F version / SI TM54F version

TM54F_MA, TM54F_SL	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays the Safety Integrated version for the Terminal Module 54F (TM54F).

**Index:**  
[0] = Safety Version (major release)  
[1] = Safety Version (minor release)  
[2] = Safety Version (baselevel or patch)  
[3] = Safety Version (hotfix)

**Dependency:** Refer to: r9390, r9590, r9770, r9870, r9890

**Note:** Example:  
r10090[0] = 2, r10090[1] = 60, r10090[2] = 1, r10090[3] = 0 --> SI TM54F version V02.60.01.00

---

### p60022 PROFIsafe telegram selection / Ps telegram\_sel

VECTOR_G	<b>Can be changed:</b> T	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned16	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> Safety Integrated	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	0	902	0

**Description:** Sets the PROFIsafe telegram number.

**Value:**  
0: No PROFIsafe telegram selected  
30: PROFIsafe standard telegram 30, PZD-1/1  
31: PROFIsafe standard telegram 31, PZD-2/2  
901: PROFIsafe SIEMENS telegram 901, PZD-3/5  
902: PROFIsafe SIEMENS telegram 902, PZD-3/6

**Dependency:** Refer to: p9611, p9811

---

### r61000[0...239] PROFINET Name of Station / PN Name of Station

CU_G130_DP (PRO- FINET), CU_G130_PN, CU_G150_DP (PRO- FINET), CU_G150_PN	<b>Can be changed:</b> -	<b>Calculated:</b> -	<b>Access level:</b> 3
	<b>Data type:</b> Unsigned8	<b>Dynamic index:</b> -	<b>Func. diagram:</b> -
	<b>P-Group:</b> -	<b>Units group:</b> -	<b>Unit selection:</b> -
	<b>Not for motor type:</b> -	<b>Scaling:</b> -	<b>Expert list:</b> 1
	<b>Min</b>	<b>Max</b>	<b>Factory setting</b>
	-	-	-

**Description:** Displays PROFINET Name of Station.

**Notice:** An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

---

<b>r61001[0...3]</b>	<b>PROFINET IP of Station / PN IP of Station</b>		
CU_G130_DP (PRO-FINET), CU_G130_PN, CU_G150_DP (PRO-FINET), CU_G150_PN	<b>Can be changed:</b> - <b>Data type:</b> Unsigned8 <b>P-Group:</b> - <b>Not for motor type:</b> -	<b>Calculated:</b> - <b>Dynamic index:</b> - <b>Units group:</b> - <b>Scaling:</b> -	<b>Access level:</b> 3 <b>Func. diagram:</b> - <b>Unit selection:</b> - <b>Expert list:</b> 1
	<b>Min</b> -	<b>Max</b> -	<b>Factory setting</b> -
<b>Description:</b>	Displays PROFINET IP of Station.		

## 1.3 Parameters for data sets

### 1.3.1 Parameters for command data sets (CDS)

The following list contains the parameters that are dependent on the command data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: CDS

p0641[0...n]	Cl: Current limit, variable / Curr lim var
p0700[0...n]	Macro Binector Input (BI) / Macro BI
p0820[0...n]	Bl: Drive Data Set selection DDS bit 0 / DDS select., bit 0
p0821[0...n]	Bl: Drive Data Set selection DDS bit 1 / DDS select., bit 1
p0822[0...n]	Bl: Drive Data Set selection DDS bit 2 / DDS select., bit 2
p0823[0...n]	Bl: Drive Data Set selection DDS bit 3 / DDS select., bit 3
p0824[0...n]	Bl: Drive Data Set selection DDS bit 4 / DDS select., bit 4
p0828[0...n]	Bl: Motor changeover, feedback signal / Mot_chng fdbk sig
p0840[0...n]	Bl: ON / OFF (OFF1) / ON / OFF (OFF1)
p0844[0...n]	Bl: No coast-down / coast-down (OFF2) signal source 1 / OFF2 S_src 1
p0845[0...n]	Bl: No coast-down / coast-down (OFF2) signal source 2 / OFF2 S_src 2
p0848[0...n]	Bl: No Quick Stop / Quick Stop (OFF3) signal source 1 / OFF3 S_src 1
p0849[0...n]	Bl: No Quick Stop / Quick Stop (OFF3) signal source 2 / OFF3 S_src 2
p0852[0...n]	Bl: Enable operation/inhibit operation / Operation enable
p0854[0...n]	Bl: Control by PLC/no control by PLC / Master ctrl by PLC
p0855[0...n]	Bl: Unconditionally release holding brake / Uncond open brake
p0856[0...n]	Bl: Speed controller enable / n_ctrl enable
p0858[0...n]	Bl: Unconditionally close holding brake / Uncond close brake
p1000[0...n]	Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set
p1020[0...n]	Bl: Fixed speed setpoint selection Bit 0 / n_set_fixed Bit 0
p1021[0...n]	Bl: Fixed speed setpoint selection Bit 1 / n_set_fixed Bit 1
p1022[0...n]	Bl: Fixed speed setpoint selection Bit 2 / n_set_fixed Bit 2
p1023[0...n]	Bl: Fixed speed setpoint selection Bit 3 / n_set_fixed Bit 3
p1035[0...n]	Bl: Motorized potentiometer setpoint raise / Mop raise
p1036[0...n]	Bl: Motorized potentiometer lower setpoint / Mop lower
p1039[0...n]	Bl: Motorized potentiometer inversion / MotP inv
p1041[0...n]	Bl: Motorized potentiometer manual/automatic / Mop manual/auto
p1042[0...n]	Cl: Motorized potentiometer automatic setpoint / Mop auto setpoint
p1043[0...n]	Bl: Motorized potentiometer accept setting value / MotP acc set val
p1044[0...n]	Cl: Motorized potentiometer setting value / Mop set val
p1051[0...n]	Cl: Speed limit RFG positive direction of rotation / n_limit RFG pos
p1052[0...n]	Cl: Speed limit RFG negative direction of rotation / n_limit RFG neg
p1055[0...n]	Bl: Jog bit 0 / Jog bit 0
p1056[0...n]	Bl: Jog bit 1 / Jog bit 1
p1070[0...n]	Cl: Main setpoint / Main setpoint
p1071[0...n]	Cl: Main setpoint scaling / Main setp scal
p1075[0...n]	Cl: Supplementary setpoint / Suppl setp
p1076[0...n]	Cl: Supplementary setpoint scaling / Suppl setp scal
p1085[0...n]	Cl: Speed limit in positive direction of rotation / n_limit pos
p1088[0...n]	Cl: Speed limit in negative direction of rotation / n_limit neg
p1106[0...n]	Cl: Minimum speed signal source / n_min s_src
p1110[0...n]	Bl: Inhibit negative direction / Inhib neg dir
p1111[0...n]	Bl: Inhibit positive direction / Inhib pos dir
p1113[0...n]	Bl: Setpoint inversion / Setp inv

p1122[0...n]	BI: Bypass ramp-function generator / Bypass RFG
p1138[0...n]	CI: Up ramp scaling / Up ramp scaling
p1139[0...n]	CI: Down ramp scaling / Down ramp scaling
p1140[0...n]	BI: Enable ramp-function generator/inhibit ramp-function generator / RFG enable
p1141[0...n]	BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG
p1142[0...n]	BI: Enable setpoint/inhibit setpoint / Setpoint enable
p1143[0...n]	BI: Ramp-function generator, accept setting value / RFG accept set v
p1144[0...n]	CI: Ramp-function generator setting value / RFG setting value
p1155[0...n]	CI: Speed controller speed setpoint 1 / n_ctrl n_set 1
p1160[0...n]	CI: Speed controller speed setpoint 2 / n_ctrl n_set 2
p1201[0...n]	BI: Flying restart enable signal source / Fly_res enab S_src
p1230[0...n]	BI: Armature short-circuit / DC braking activation / ASC/DCBRK act
p1235[0...n]	BI: External armature short-circuit, contactor feedback signal / ASC ext feedback
p1330[0...n]	CI: U/f control independent voltage setpoint / Uf U_set independ.
p1356[0...n]	CI: U/f control, angular setpoint / Uf ang setpoint
p1437[0...n]	CI: Speed controller, reference model I component input / n_ctrRefMod I_comp
p1440[0...n]	CI: Speed controller speed actual value / n_ctrl n_act
p1455[0...n]	CI: Speed controller P gain adaptation signal / n_ctr adapt_sig Kp
p1466[0...n]	CI: Speed controller P-gain scaling / n_ctrl Kp scal
p1475[0...n]	CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB
p1476[0...n]	BI: Speed controller hold integrator / n_ctrl integ stop
p1477[0...n]	BI: Speed controller set integrator value / n_ctrl integ set
p1478[0...n]	CI: Speed controller integrator setting value / n_ctr integ_setVal
p1479[0...n]	CI: Speed controller integrator setting value scaling / n_ctrl I_val scal
p1486[0...n]	CI: Droop compensation torque / Droop M_comp
p1492[0...n]	BI: Droop feedback enable / Droop enable
p1495[0...n]	CI: Acceleration pre-control / a_prectrl
p1497[0...n]	CI: Moment of inertia, scaling / M_mom inert scal
p1500[0...n]	Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set
p1501[0...n]	BI: Change over between closed-loop speed/torque control / Changeov n/M_ctrl
p1503[0...n]	CI: Torque setpoint / M_set
p1511[0...n]	CI: Supplementary torque 1 / M_suppl 1
p1512[0...n]	CI: Supplementary torque 1 scaling / M_suppl 1 scal
p1513[0...n]	CI: Supplementary torque 2 / M_suppl 2
p1522[0...n]	CI: Torque limit upper / M_max upper
p1523[0...n]	CI: Torque limit lower / M_max lower
p1528[0...n]	CI: Torque limit upper scaling / M_max upper scal
p1529[0...n]	CI: Torque limit lower scaling / M_max lower scal
p1540[0...n]	CI: Torque limit speed controller upper scaling / M_max n-ctr upScal
p1541[0...n]	CI: Torque limit. speed controller lower scaling / M_max nctr lowScal
p1545[0...n]	BI: Activates travel to a fixed stop / TfS activation
p1551[0...n]	BI: Torque limit variable/fixed signal source / M_lim var/fixS_src
p1552[0...n]	CI: Torque limit upper scaling without offset / M_max up w/o offs
p1554[0...n]	CI: Torque limit lower scaling without offset / M_max low w/o offs
p1555[0...n]	CI: Power limit / P_max
p1569[0...n]	CI: Supplementary torque 3 / M_suppl 3
p1571[0...n]	CI: Supplementary flux setpoint / Suppl flux setp
p1640[0...n]	CI: Excitation current actual value signal source / I_exc_ActVal S_src
p2103[0...n]	BI: 1. Acknowledge faults / 1. Acknowledge
p2104[0...n]	BI: 2. Acknowledge faults / 2. Acknowledge
p2105[0...n]	BI: 3. Acknowledge faults / 3. Acknowledge
p2106[0...n]	BI: External fault 1 / External fault 1
p2107[0...n]	BI: External fault 2 / External fault 2

p2108[0...n]	BI: External fault 3 / External fault 3
p2112[0...n]	BI: External alarm 1 / External alarm 1
p2116[0...n]	BI: External alarm 2 / External alarm 2
p2117[0...n]	BI: External alarm 3 / External alarm 3
p2144[0...n]	BI: Motor stall monitoring enable (negated) / Mot stall enab neg
p2148[0...n]	BI: RFG active / RFG active
p2151[0...n]	CI: Speed setpoint for messages/signals / n_set for msg
p2154[0...n]	CI: Speed setpoint 2 / n_set 2
p2200[0...n]	BI: Technology controller enable / Tec_ctrl enable
p2220[0...n]	BI: Technology controller fixed value selection bit 0 / Tec_ctrl sel bit 0
p2221[0...n]	BI: Technology controller fixed value selection bit 1 / Tec_ctrl sel bit 1
p2222[0...n]	BI: Technology controller fixed value selection bit 2 / Tec_ctrl sel bit 2
p2223[0...n]	BI: Technology controller fixed value selection bit 3 / Tec_ctrl sel bit 3
p2235[0...n]	BI: Technology controller motorized potentiometer raise setpoint / Tec_ctrl mop raise
p2236[0...n]	BI: Technology controller motorized potentiometer lower setpoint / Tec_ctrl mop lower
p2253[0...n]	CI: Technology controller setpoint 1 / Tec_ctrl setp 1
p2254[0...n]	CI: Technology controller setpoint 2 / Tec_ctrl setp 2
p2264[0...n]	CI: Technology controller actual value / Tec_ctrl act val
p2286[0...n]	BI: Hold technology controller integrator / Tec_ctr integ stop
p2289[0...n]	CI: Technology controller pre-control signal / Tec_ctrl prectrl
p2296[0...n]	CI: Technology controller output scaling / Tec_ctrl outp scal
p2297[0...n]	CI: Technology controller maximum limit signal source / Tec_ctrMaxLimS_src
p2298[0...n]	CI: Technology controller minimum limit signal source / Tec_ctrl min_l s_s
p2299[0...n]	CI: Technology controller limit offset / Tech_ctrl lim offs
p3111[0...n]	BI: External fault 3, enable / Ext fault 3 enab
p3112[0...n]	BI: External fault 3 enable negated / Ext flt 3 enab neg
p3784[0...n]	BI: Sync-line-drive external increase voltage / Sync ext U incr
p3785[0...n]	BI: Sync-line-drive external decrease voltage / Sync ext U decr
p3802[0...n]	BI: Sync-line-drive enable / Sync enable

### 1.3.2 Parameters for drive data sets (DDS)

The following list contains the parameters that are dependent on the drive data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: DDS

p0186[0...n]	Motor Data Sets (MDS) number / MDS number
p0187[0...n]	Encoder 1 encoder data set number / Enc 1 EDS number
p0188[0...n]	Encoder 2 encoder data set number / Enc 2 EDS number
p0189[0...n]	Encoder 3 encoder data set number / Enc 3 EDS number
p0340[0...n]	Automatic calculation, motor/control parameters / Calc auto par
p0572[0...n]	Activate/de-activate inhibit list / Inh_list act/deact
p0578[0...n]	Calculate technology-dependent parameters / Calc tec par
p0640[0...n]	Current limit / Current limit
p1001[0...n]	CO: Fixed speed setpoint 1 / n_set_fixed 1
p1002[0...n]	CO: Fixed speed setpoint 2 / n_set_fixed 2
p1003[0...n]	CO: Fixed speed setpoint 3 / n_set_fixed 3
p1004[0...n]	CO: Fixed speed setpoint 4 / n_set_fixed 4
p1005[0...n]	CO: Fixed speed setpoint 5 / n_set_fixed 5
p1006[0...n]	CO: Fixed speed setpoint 6 / n_set_fixed 6
p1007[0...n]	CO: Fixed speed setpoint 7 / n_set_fixed 7
p1008[0...n]	CO: Fixed speed setpoint 8 / n_set_fixed 8
p1009[0...n]	CO: Fixed speed setpoint 9 / n_set_fixed 9

p1010[0...n]	CO: Fixed speed setpoint 10 / n_set_fixed 10
p1011[0...n]	CO: Fixed speed setpoint 11 / n_set_fixed 11
p1012[0...n]	CO: Fixed speed setpoint 12 / n_set_fixed 12
p1013[0...n]	CO: Fixed speed setpoint 13 / n_set_fixed 13
p1014[0...n]	CO: Fixed speed setpoint 14 / n_set_fixed 14
p1015[0...n]	CO: Fixed speed setpoint 15 / n_set_fixed 15
p1030[0...n]	Motorized potentiometer configuration / Mop configuration
p1037[0...n]	Motorized potentiometer maximum speed / MotP n_max
p1038[0...n]	Motorized potentiometer minimum speed / MotP n_min
p1040[0...n]	Motorized potentiometer starting value / Mop start value
p1047[0...n]	Motorized potentiometer ramp-up time / Mop ramp-up time
p1048[0...n]	Motorized potentiometer ramp-down time / Mop ramp-down time
p1058[0...n]	Jog 1 speed setpoint / Jog 1 n_set
p1059[0...n]	Jog 2 speed setpoint / Jog 2 n_set
p1063[0...n]	Speed limit setpoint channel / n_limit setp
p1080[0...n]	Minimum speed / n_min
p1082[0...n]	Maximum speed / n_max
p1083[0...n]	CO: Speed limit in positive direction of rotation / n_limit pos
p1086[0...n]	CO: Speed limit in negative direction of rotation / n_limit neg
p1091[0...n]	Skip speed 1 / n_skip 1
p1092[0...n]	Skip speed 2 / n_skip 2
p1093[0...n]	Skip speed 3 / n_skip 3
p1094[0...n]	Skip speed 4 / n_skip 4
p1101[0...n]	Skip speed bandwidth / n_skip bandwidth
p1120[0...n]	Ramp-function generator ramp-up time / RFG ramp-up time
p1121[0...n]	Ramp-function generator ramp-down time / RFG ramp-down time
p1130[0...n]	Ramp-function generator initial rounding-off time / RFG t_start_round

p3329[0...n]	Fluid flow machine speed point 5 / Fluid_mach n5
p3800[0...n]	Sync-line-drive activation / Sync act
p3801[0...n]	Sync-line-drive, drive object number / Sync DO_No
p3806[0...n]	Sync-line-drive frequency difference threshold value / Sync f_diff thresh
p3809[0...n]	Sync-line-drive phase setpoint / Sync phase setp
p3811[0...n]	Sync-line-drive frequency limiting / Sync f_lim
p3813[0...n]	Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh
p3815[0...n]	Sync-line-drive voltage difference threshold value / Sync U_diff thresh
p3820[0...n]	Friction characteristic, value n0 / Friction n0
p3821[0...n]	Friction characteristic, value n1 / Friction n1
p3822[0...n]	Friction characteristic, value n2 / Friction n2
p3823[0...n]	Friction characteristic, value n3 / Friction n3
p3824[0...n]	Friction characteristic, value n4 / Friction n4
p3825[0...n]	Friction characteristic, value n5 / Friction n5
p3826[0...n]	Friction characteristic, value n6 / Friction n6
p3827[0...n]	Friction characteristic, value n7 / Friction n7
p3828[0...n]	Friction characteristic, value n8 / Friction n8
p3829[0...n]	Friction characteristic, value n9 / Friction n9
p3830[0...n]	Friction characteristic, value M0 / Friction M0
p3831[0...n]	Friction characteristic, value M1 / Friction M1
p3832[0...n]	Friction characteristic, value M2 / Friction M2
p3833[0...n]	Friction characteristic, value M3 / Friction M3
p3834[0...n]	Friction characteristic, value M4 / Friction M4
p3835[0...n]	Friction characteristic, value M5 / Friction M5
p3836[0...n]	Friction characteristic, value M6 / Friction M6
p3837[0...n]	Friction characteristic, value M7 / Friction M7
p3838[0...n]	Friction characteristic, value M8 / Friction M8
p3839[0...n]	Friction characteristic, value M9 / Friction M9
p3843[0...n]	Friction characteristic smoothing time frictional torque diff. / Frict T_smooth dM
p3844[0...n]	Friction characteristic number changeover point upper / Frict chngov pt up
p3846[0...n]	Friction characteristic record ramp-up/ramp-down time / Frict rec t_RFG
p3847[0...n]	Friction characteristic record warm-up time / Frict rec t_warm
r3925[0...n]	Identification final display / Ident final_disp
r3927[0...n]	Motor data identification control word / MotID STW
r3928[0...n]	Rotating measurement configuration / Rot meas config
r3998[0...n]	First drive commissioning / First drv_comm
p7035[0...n]	Par_circuit circulating current control operating mode / Circ_I mode
p7036[0...n]	Par_circuit circulating current control proportional gain / Circ_I Kp
p7037[0...n]	Par_circuit circulating current control integral time / I_circ Tn
p7038[0...n]	Par_circuit circulating current control limit / I_circ limit

### 1.3.3 Parameters for encoder data sets (EDS)

The following list contains the parameters that are dependent on the encoder data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: EDS

p0141[0...n]	Encoder interface (Sensor Module) component number / Enc_intf comp_no
p0142[0...n]	Encoder component number / Encoder comp_no
p0144[0...n]	Sensor Module detection via LED / SM detection LED
p0145[0...n]	Activate/de-activate encoder interface / Enc_intf act/deact
r0146[0...n]	Encoder interface active/inactive / Enc_intf act/inact
r0147[0...n]	Sensor Module EEPROM data version / SM EEPROM version
r0148[0...n]	Sensor Module firmware version / SM FW version
p0400[0...n]	Encoder type selection / Enc_typ sel
p0401[0...n]	Encoder type, OEM selection / Enc type OEM sel
p0402[0...n]	Gearbox type selection / Gearbox type sel
p0404[0...n]	Encoder configuration effective / Enc_config eff
p0405[0...n]	Square-wave encoder track A/B / Sq-wave enc A/B
p0407[0...n]	Linear encoder grid division / Enc grid div
p0408[0...n]	Rotary encoder pulse No. / Rot enc pulse No.
p0410[0...n]	Encoder inversion actual value / Enc inv act value
p0411[0...n]	Measuring gear, configuration / Meas gear config
p0412[0...n]	Measuring gear, absolute encoder, rotary, revolutions, virtual / Abs rot rev
p0413[0...n]	Measuring gear, position tracking tolerance window / Pos track window
p0414[0...n]	Redundant coarse position value relevant bits (identified) / Relevant bits
p0415[0...n]	Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB
p0416[0...n]	Non safety-relevant meas. steps position value pos1 (detected) / nsrPos1
p0417[0...n]	Encoder safety comparison algorithm (detected) / Safety CompAlgo
p0418[0...n]	Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1
p0419[0...n]	Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2
p0420[0...n]	Encoder connection / Enc_connection
p0421[0...n]	Absolute encoder rotary multiturn resolution / Enc abs multiturn
p0422[0...n]	Absolute encoder linear measuring step resolution / Enc abs meas step
p0423[0...n]	Absolute encoder rotary singleturn resolution / Enc abs singleturn
p0424[0...n]	Encoder, linear zero mark distance / Enc lin ZM_dist
p0425[0...n]	Encoder, rotary zero mark distance / Enc rot dist ZM
p0426[0...n]	Encoder zero mark differential distance / Enc ZM Dif_dist
p0427[0...n]	Encoder SSI baud rate / Enc SSI baud rate
p0428[0...n]	Encoder SSI monoflop time / Enc SSI t_monoflop
p0429[0...n]	Encoder SSI configuration / Enc SSI config
p0430[0...n]	Sensor Module configuration / SM config
p0431[0...n]	Angular commutation offset / Ang_com offset
p0432[0...n]	Gearbox factor, encoder revolutions / Grbx_fact enc_rev
p0433[0...n]	Gearbox factor, motor/load revolutions / Grbx_fact mot_rev
p0434[0...n]	Encoder SSI error bit / Enc SSI error bit
p0435[0...n]	Encoder SSI alarm bit / Enc SSI alarm bit
p0436[0...n]	Encoder SSI parity bit / Enc SSI parity bit
p0437[0...n]	Sensor Module configuration extended / SM config ext
p0438[0...n]	Squarewave encoder filter time / Enc t_filt
p0439[0...n]	Encoder ramp-up time / Enc ramp-up time
p0440[0...n]	Copy encoder serial number / Copy enc ser_no
p0441[0...n]	Encoder commissioning serial number part 1 / Enc comm ser_no 1
p0442[0...n]	Encoder commissioning serial number part 2 / Enc comm ser_no 2
p0443[0...n]	Encoder commissioning serial number part 3 / Enc comm ser_no 3

p0444[0...n]	Encoder commissioning serial number part 4 / Enc comm ser_no 4
p0445[0...n]	Encoder commissioning serial number part 5 / Enc comm ser_no 5
p0446[0...n]	Encoder SSI number of bits before the absolute value / Enc SSI bit before
p0447[0...n]	Encoder SSI number of bits absolute value / Enc SSI bit val
p0448[0...n]	Encoder SSI number of bits after the absolute value / Enc SSI bit after
p0449[0...n]	Encoder SSI number of bits, filler bits / Enc SSI fill bits
p0453[0...n]	Pulse encoder evaluation zero speed measuring time / Enc_ev z 0 t_meas
p0493[0...n]	Zero mark selection, input terminal / ZM_sel inp_term
p0494[0...n]	Equivalent zero mark, input terminal / ZM_equiv input
p4600[0...n]	Motor temperature sensor 1 sensor type / Temp_sens 1 type
p4601[0...n]	Motor temperature sensor 2 sensor type / Temp_sens 2 type
p4602[0...n]	Motor temperature sensor 3 sensor type / Temp_sens 3 type
p4603[0...n]	Motor temperature sensor 4 sensor type / Temp_sens 4 type
p4662[0...n]	Encoder characteristic type / Enc char_type
p4663[0...n]	Encoder characteristic K0 / Enc char K0
p4664[0...n]	Encoder characteristic K1 / Enc char K1
p4665[0...n]	Encoder characteristic K2 / Enc char K2
p4666[0...n]	Encoder characteristic K3 / Enc char K3
p4670[0...n]	Analog sensor configuration / Ana_sens config
p4671[0...n]	Analog sensor input / Ana_sens inp
p4672[0...n]	Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0
p4673[0...n]	Analog sensor channel A voltage per encoder period / Ana_sens A U/per
p4674[0...n]	Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0
p4675[0...n]	Analog sensor channel B voltage per encoder period / Ana_sens B U/per
p4676[0...n]	Analog sensor range limit threshold / Ana_sens lim thr
p4677[0...n]	Analog sensor LVDT configuration / Ana_sens LVDT conf
p4678[0...n]	Analog sensor LVDT ratio / An_sens LVDT ratio
p4679[0...n]	Analog sensor LVDT phase / An_sens LVDT ph
p4680[0...n]	Zero mark monitoring tolerance permissible / ZM_monit tol perm
p4681[0...n]	Zero mark monitoring, tolerance window limit 1 positive / ZM tol lim 1 pos
p4682[0...n]	Zero mark monitoring, tolerance window limit 1 negative / ZM tol lim 1 neg
p4683[0...n]	Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos
p4684[0...n]	Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg
p4685[0...n]	Speed actual value mean value generation / n_act mean val
p4686[0...n]	Zero mark minimum length / ZM min length

### 1.3.4 Parameters for motor data sets (MDS)

The following list contains the parameters that are dependent on the motor data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: MDS

p0131[0...n]	Motor component number / Mot comp_no
p0300[0...n]	Motor type selection / Mot type sel
p0301[0...n]	Motor code number selection / Mot code No. sel
r0302[0...n]	Motor code number of motor with DRIVE-CLiQ / Motor code Mot DLQ
r0303[0...n]	Motor with DRIVE-CLiQ status word / Motor w DLQ ZSW
p0304[0...n]	Rated motor voltage / Mot U_rated
p0305[0...n]	Rated motor current / Mot I_rated
p0306[0...n]	Number of motors connected in parallel / Motor qty
p0307[0...n]	Rated motor power / Mot P_rated
p0308[0...n]	Rated motor power factor / Mot cos_phi_rated
p0309[0...n]	Rated motor efficiency / Mot eta_rated

p0310[0...n]	Rated motor frequency / Mot f <sub>rated</sub>
p0311[0...n]	Rated motor speed / Mot n <sub>rated</sub>
r0313[0...n]	Motor pole pair number, actual (or calculated) / Mot PolePairNo act
p0314[0...n]	Motor pole pair number / Mot pole pair No.
p0316[0...n]	Motor torque constant / Mot kT
p0318[0...n]	Motor stall current / Mot I <sub>standstill</sub>
p0320[0...n]	Motor rated magnetizing current/short-circuit current / Mot I <sub>mag_rated</sub>
p0322[0...n]	Maximum motor speed / Mot n <sub>max</sub>
p0323[0...n]	Maximum motor current / Mot I <sub>max</sub>
p0324[0...n]	Winding maximum speed / Winding n <sub>max</sub>
p0325[0...n]	Motor pole position identification current, 1st phase / Mot PolID I 1st ph
p0327[0...n]	Optimum motor load angle / Mot phi <sub>load opt</sub>
p0328[0...n]	Motor reluctance torque constant / Mot kT <sub>reluctance</sub>
p0329[0...n]	Motor pole position identification current / Mot PolID current
r0330[0...n]	Rated motor slip / Mot slip <sub>rated</sub>
r0331[0...n]	Actual motor magnetizing current/short-circuit current / Mot I <sub>mag_rtd act</sub>
r0332[0...n]	Rated motor power factor / Mot cos_phi <sub>rated</sub>
r0333[0...n]	Rated motor torque / Mot M <sub>rated</sub>
r0334[0...n]	Actual motor-torque constant / Mot kT act
p0335[0...n]	Motor cooling type / Motor cooling type
r0336[0...n]	Actual rated motor frequency / Mot f <sub>rated act</sub>
r0337[0...n]	Rated motor EMF / Mot EMF <sub>rated</sub>
r0339[0...n]	Rated motor voltage / Mot U <sub>rated</sub>
p0341[0...n]	Motor moment of inertia / Mot M <sub>mom of inert</sub>
p0342[0...n]	Ratio between the total and motor moment of inertia / Mot MomInert Ratio
r0343[0...n]	Rated motor current identified / Mot I <sub>rated ident</sub>
p0344[0...n]	Motor weight (for the thermal motor model) / Mot weight th mod
r0345[0...n]	Nominal motor starting time / Mot t <sub>start_rated</sub>
p0346[0...n]	Motor excitation build-up time / Mot t <sub>excitation</sub>
p0347[0...n]	Motor de-excitation time / Mot t <sub>de-excitat.</sub>
p0350[0...n]	Motor stator resistance, cold / Mot R <sub>stator cold</sub>
p0352[0...n]	Cable resistance / Mot R <sub>cable cold</sub>
p0353[0...n]	Motor series inductance / Mot L <sub>series</sub>
p0354[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R <sub>r cold</sub> /R <sub>D d</sub>
p0355[0...n]	Motor damping resistance, q axis / Mot R <sub>damp q</sub>
p0356[0...n]	Motor stator leakage inductance / Mot L <sub>stator leak.</sub>
p0357[0...n]	Motor stator inductance, d axis / Mot L <sub>stator d</sub>
p0358[0...n]	Motor rotor leakage inductance / damping inductance, d axis / Mot L <sub>r leak</sub> / LDd
p0359[0...n]	Motor damping inductance, q axis / Mot L <sub>damp q</sub>
p0360[0...n]	Motor magnetizing inductance/magn. inductance, d axis saturated / Mot L <sub>h</sub> /L <sub>h d sat</sub>
p0361[0...n]	Motor magnetizing inductance q axis, saturated / Mot L <sub>magn q sat</sub>
p0362[0...n]	Motor saturation characteristic flux 1 / Mot saturat.flux 1
p0363[0...n]	Motor saturation characteristic flux 2 / Mot saturat.flux 2
p0364[0...n]	Motor saturation characteristic flux 3 / Mot saturat.flux 3
p0365[0...n]	Motor saturation characteristic flux 4 / Mot saturat.flux 4
p0366[0...n]	Motor saturation characteristic I <sub>mag</sub> 1 / Mot sat. I <sub>mag</sub> 1
p0367[0...n]	Motor saturation characteristic I <sub>mag</sub> 2 / Mot sat. I <sub>mag</sub> 2
p0368[0...n]	Motor saturation characteristic I <sub>mag</sub> 3 / Mot sat. I <sub>mag</sub> 3
p0369[0...n]	Motor saturation characteristic I <sub>mag</sub> 4 / Mot sat. I <sub>mag</sub> 4
r0370[0...n]	Motor stator resistance, cold / Mot R <sub>stator cold</sub>
r0372[0...n]	Cable resistance / Mot R <sub>cable</sub>
r0373[0...n]	Motor rated stator resistance / Mot R <sub>stator rated</sub>
r0374[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R <sub>r cold</sub> / RDd

r0375[0...n]	Motor damping resistance, q axis / Mot R_damp q
r0376[0...n]	Rated motor rotor resistance / Mot R_rotor rated
r0377[0...n]	Motor leakage inductance, total / Mot L_leak total
r0378[0...n]	Motor stator inductance, d axis / Mot L_stator d
r0380[0...n]	Motor damping inductance, d axis / Mot L_damping_d
r0381[0...n]	Motor damping inductance, q axis / Mot L_damping_q
r0382[0...n]	Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat
r0383[0...n]	Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
r0384[0...n]	Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd
r0385[0...n]	Motor damping time constant, q axis / Mot L_damping q
r0386[0...n]	Motor stator leakage time constant / Mot T_stator leak
r0387[0...n]	Motor stator leakage time constant, q axis / Mot T_Sleak /T_Sq
p0389[0...n]	Excitation rated no-load current / Exc I_noload_rated
p0390[0...n]	Rated excitation current / Exc I_rated
p0391[0...n]	Current controller adaptation, starting point KP / I_adapt pt KP
p0392[0...n]	Current controller adaptation, starting point KP adapted / I_adapt pt KP adap
p0393[0...n]	Current controller adaptation P gain scaling / I_adapt Kp scal
r0395[0...n]	Actual stator resistance / R_stator act
r0396[0...n]	Actual rotor resistance / R_rotor act
p0398[0...n]	Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1
p0399[0...n]	Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3
p0530[0...n]	Bearing version selection / Bearing vers sel
p0531[0...n]	Bearing code number selection / Bearing codeNo sel
p0532[0...n]	Bearing maximum speed / Bearing n_max
p0600[0...n]	Motor temperature sensor for monitoring / Mot temp_sensor
p0601[0...n]	Motor temperature sensor type / Mot_temp_sens type
p0604[0...n]	Mot_temp_mod 1/KTY alarm threshold / Mod 1/KTY A thresh
p0605[0...n]	Mot_temp_mod 1/2 threshold / Threshold
p0606[0...n]	Mot_temp_mod 2/KTY timer / Mod 2/KTY t_timer
p0607[0...n]	Temperature sensor fault timer / Sensor fault time
p0610[0...n]	Motor overtemperature response / Mot temp response
p0611[0...n]	I2t motor model thermal time constant / I2t mot_mod T
p0612[0...n]	Mot_temp_mod activation / Mot_temp_mod act
p0615[0...n]	Mot_temp_mod 1 (I2t) fault threshold / I2t F thresh
p0616[0...n]	Motor overtemperature alarm threshold 1 / Mot temp alarm 1
p0620[0...n]	Thermal adaptation, stator and rotor resistance / Mot therm_adapt R
p0621[0...n]	Identification stator resistance after restart / Rst_ident Restart
p0622[0...n]	Motor excitation time for Rs_ident after powering up again / t_excit Rs_id
p0624[0...n]	Motor temperature offset PT100 / Mot T_offset PT100
p0625[0...n]	Motor ambient temperature / Mot T_ambient
p0626[0...n]	Motor overtemperature, stator core / Mot T_over core
p0627[0...n]	Motor overtemperature, stator winding / Mot T_over stator
p0628[0...n]	Motor overtemperature rotor winding / Mot T_over rotor
r0630[0...n]	Mot_temp_mod ambient temperature / Mod T_ambient
r0631[0...n]	Mot_temp_mod stator iron temperature / Mod T_stator
r0632[0...n]	Mot_temp_mod stator winding temperature / Mod T_winding
r0633[0...n]	Mot_temp_mod rotor temperature / Mod T_rotor
p0634[0...n]	Q flux flux constant unsaturated / PSIQ KPSI UNSAT
p0635[0...n]	Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT
p0636[0...n]	Q flux direct axis current constant unsaturated / PSIQ KID UNSAT
p0637[0...n]	Q flux flux gradient saturated / PSIQ Grad SAT
p0643[0...n]	Overvoltage protection for synchronous motors / Overvolt_protect
p0650[0...n]	Actual motor operating hours / Mot t_oper act

p0651[0...n]	Motor operating hours maintenance interval / Mot t_op maint
p0652[0...n]	Motor stator resistance, scaling / Mot R_stator scal
p0653[0...n]	Motor stator leakage inductance, scaling / Mot L_S_leak scal
p0655[0...n]	Motor magnetizing inductance, d axis saturated scaling / Mot L_m d sat scal
p0656[0...n]	Motor magnetizing inductance, q axis, saturated scaling / Mot L_m q sat scal
p0657[0...n]	Motor damping inductance, d axis scaling / Mot L_damp d scal
p0658[0...n]	Motor damping inductance, q axis scaling / Mot L_damp q scal
p0659[0...n]	Motor damping resistance, d axis scaling / Mot R_damp d scal
p0660[0...n]	Motor damping resistance, q axis scaling / Mot R_damp q scal
p0826[0...n]	Motor changeover, motor number / Mot_chng mot No.
p0827[0...n]	Motor changeover status word bit number / Mot_chg ZSW bitNo.
p1231[0...n]	Armature short-circuit / DC braking configuration / ASC/DCBRK config
p1232[0...n]	DC braking, braking current / DCBRK I_brake
p1233[0...n]	DC braking time / DCBRK time
p1234[0...n]	Speed at the start of DC braking / DCBRK n_start
p1236[0...n]	Ext. armature short-cct., contactor feedback signal monit. time / ASC ext t_monit
p1237[0...n]	External armature short-circuit, delay time when opening / ASC ext t_wait
p1909[0...n]	Motor data identification control word / MotID STW
p1980[0...n]	PolID technique / PolID technique
p1982[0...n]	PolID selection / PolID selection
p1991[0...n]	Motor changeover, angular commutation correction / Ang_com corr
p1999[0...n]	Ang. commutation offset calibr. and PolID scaling / Com_ang_offs scal
p4610[0...n]	Motor temperature sensor 1 sensor type MDS / Temp sens1 typ MDS
p4611[0...n]	Motor temperature sensor 2 sensor type MDS / Temp sens2 typ MDS
p4612[0...n]	Motor temperature sensor 3 sensor type MDS / Temp sens3 typ MDS
p4613[0...n]	Motor temperature sensor 4 sensor type MDS / Temp sens4 typ MDS

### 1.3.5 Parameters for power unit data sets (PDS)

The following list contains the parameters that are dependent on the power unit data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: PDS

p0121[0...n]	Power unit component number / PU comp_no
p0124[0...n]	Power unit detection via LED / PU detection LED
p0125[0...n]	Activate/de-activate power unit components / PU_comp act/deact
r0126[0...n]	Power unit components active/inactive / PU comp act/inact
r0127[0...n]	Power unit version EPROM data / PU EPROM version
r0128[0...n]	Power unit, firmware version / PU FW version
r0200[0...n]	Power unit code number actual / PU code no. act
p0201[0...n]	Power unit code number / PU code no
r0203[0...n]	Actual power unit type / PU actual type
r0204[0...n]	Power unit hardware properties / PU HW property
p0251[0...n]	Operating hours counter power unit fan / PU fan t_oper
p0895[0...n]	BI: Activate/de-activate power unit components / PU_comp act/deact
p3901[0...n]	Power unit EEPROM Vdc offset calibration / PU EEPROM Vdc_offs
p7001[0...n]	Par_circuit power units enable / PU enable
r7002[0...n]	Par_circuit status power units / Status PU
r7020[0...n]	CO: Par_circuit deviation current in phase U / Phase U curr dev
r7021[0...n]	CO: Par_circuit deviation current in phase V / Phase V curr dev
r7022[0...n]	CO: Par_circuit deviation current in phase W / Phase W curr dev
r7030[0...n]	CO: Par_circuit DC link voltage deviation / Vdc deviation
p7040[0...n]	Par_circuit correction valve lockout time phase U / Comp t_lockout U

p7042[0...n]	Par_circuit correction valve lockout time phase V / Comp t_lockout V
p7044[0...n]	Par_circuit correction valve lockout time phase W / Comp t_lockout W
r7050[0...n]	Par_circuit circulating current phase U / Circ_I_phase U
r7051[0...n]	Par_circuit circulating current phase V / Circ_I_phase V
r7052[0...n]	Par_circuit circulating current phase W / Circ_I_phase W
r7200[0...n]	Par_circuit power unit overload I2t / PU overload I2t
r7201[0...n]	CO: Par_circuit power unit temperatures max. inverter / PU temp max inv
r7202[0...n]	Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer
r7203[0...n]	Par_circuit power unit temperatures max. rectifier / PU temp max rect
r7204[0...n]	Par_circuit power unit temperatures air intake / PU temp air intake
r7205[0...n]	Par_circuit power unit temperatures electronics / PU temp electr
r7206[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp inv 1
r7207[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp inv 2
r7208[0...n]	Par_circuit power unit temperatures inverter 3 / PU temp inv 3
r7209[0...n]	Par_circuit power unit temperatures inverter 4 / PU temp inv 4
r7210[0...n]	Par_circuit power unit temperatures inverter 5 / PU temp inv 5
r7211[0...n]	Par_circuit power unit temperatures inverter 6 / PU temp inv 6
r7212[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp rect 1
r7213[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp rect 2
r7214[0...n]	Par_circuit power unit temperatures depletion layer 1 / PU temp DepLayer 1
r7215[0...n]	Par_circuit power unit temperatures depletion layer 2 / PU temp DepLayer 2
r7216[0...n]	Par_circuit power unit temperatures depletion layer 3 / PU temp DepLayer 3
r7217[0...n]	Par_circuit power unit temperatures depletion layer 4 / PU temp DepLayer 4

r7240[0...n]	Par_circuit gating unit status word 1 / Gating unit ZSW1

## 1.4 Parameters for write protection and know-how protection

---

### Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions  
Section "Write protection and know-how protection"

---

### 1.4.1 Parameters with "WRITE\_NO\_LOCK"

The following list contains the parameters with the "WRITE\_NO\_LOCK" attribute.

These parameters are not affected by the write protection.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: WRITE\_NO\_LOCK

p0003	BOP access level / BOP acc_level
p0009	Device commissioning parameter filter / Dev comm par_filt
p0124[0...n]	Power unit detection via LED / PU detection LED
p0124[0...23]	Main component detection using LED / M_comp detect LED
p0144[0...n]	Sensor Module detection via LED / SM detection LED
p0154	DRIVE-CLiQ Hub Module detection via LED / Hub detection LED
p0154	Terminal Module detection via LED / TM detection LED
p0972	Drive unit reset / Drv_unit reset
p0976	Reset and load all parameters / Reset load all par
p0977	Save all parameters / Save all par
p2035	Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no
p2102	BI: Acknowledge all faults / Ackn all faults
p2111	Alarm counter / Alarm counter
p3100	RTC time stamp mode / RTC t_stamp mode
p3101[0...1]	RTC set UTC time / RTC set UTC
p3103	RTC synchronization source / RTC sync_source
p3950	Service parameter / Serv. par.
p3981	Faults, acknowledge drive object / Faults ackn DO
p3985	Master control mode selection / PcCtrl mode select
p4700[0...1]	Trace control / Trace control
p4701	Measuring function, control / Meas fct ctrl
p4707	Measurement function configuration / Meas fct config
p4710[0...1]	Trace trigger condition / Trace Trig_cond
p4711[0...5]	Trace trigger signal / Trace trig_signal
p4712[0...1]	Trace trigger threshold / Trace trig_thresh
p4713[0...1]	Trace tolerance band trigger threshold 1 / Trace trig thr 1
p4714[0...1]	Trace tolerance band trigger threshold 2 / Trace trig thr 2
p4715[0...1]	Trace bit mask trigger, bit mask / Trace trig mask
p4716[0...1]	Trace, bit mask trigger, trigger condition / Trace Trig_cond
p4717	Measuring function, number of averaging operations / Meas fct avg qty
p4718	Measuring function, number of stabilizing periods / MeasFct StabPerQty
p4720[0...1]	Trace recording cycle / Trace record_cyc
p4721[0...1]	Trace recording time / Trace record_time
p4722[0...1]	Trace trigger delay / Trace trig_delay
p4723[0...1]	Trace time slice cycle / Trace cycle
p4724[0...1]	Trace average in the time range / Trace average

p4730[0...5]	Trace record signal 0 / Trace record sig 0
p4731[0...5]	Trace record signal 1 / Trace record sig 1
p4732[0...5]	Trace record signal 2 / Trace record sig 2
p4733[0...5]	Trace record signal 3 / Trace record sig 3
p4734[0...5]	Trace record signal 4 / Trace record sig 4
p4735[0...5]	Trace record signal 5 / Trace record sig 5
p4736[0...5]	Trace record signal 6 / Trace record sig 6
p4737[0...5]	Trace record signal 7 / Trace record sig 7
p4780[0...1]	Trace physical address signal 0 / Trace PhyAddr Sig0
p4781[0...1]	Trace physical address signal 1 / Trace PhyAddr Sig1
p4782[0...1]	Trace physical address signal 2 / Trace PhyAddr Sig2
p4783[0...1]	Trace physical address signal 3 / Trace PhyAddr Sig3
p4784[0...1]	Trace physical address signal 4 / Trace PhyAddr Sig4
p4785[0...1]	Trace physical address signal 5 / Trace PhyAddr Sig5
p4786[0...1]	Trace physical address signal 6 / Trace PhyAddr Sig6
p4787[0...1]	Trace physical address signal 7 / Trace PhyAddr Sig7
p4789[0...1]	Trace physical address trigger signal / Trace PhyAddr Trig
p4795	Trace memory bank changeover / Trace mem changeov
p4800	Function generator control / FG control
p4810	Function generator mode / FG operating mode
p4812	Function generator physical address / FG phys address
p4813	Function generator physical address reference value / FG phys addr ref
p4815[0...2]	Function generator drive number / FG drive number
p4816	Function generator output signal integer number scaling / FG outp integ scal
p4819	BI: Function generator control / FG control
p4820	Function generator signal shape / FG signal shape
p4821	Function generator period / FG period duration
p4822	Function generator pulse width / FG pulse width
p4823	Function generator bandwidth / FG bandwidth
p4824	Function generator amplitude / FG amplitude
p4825	Function generator 2nd amplitude / FG 2nd amplitude
p4826	Function generator offset / FG offset
p4827	Function generator ramp-up time to offset / FG ramp-up offset
p4828	Function generator lower limit / FG lower limit
p4829	Function generator upper limit / FG upper limit
p4830	Function generator time slice cycle / FG time slice
p4831	Function generator amplitude scaling / FG amplitude scal
p4832[0...2]	Function generator amplitude scaling / FG amplitude scal
p4833[0...2]	Function generator offset scaling / FG offset scal
p4835[0...4]	Function generator free measurement function scaling / FG fr MeasFct scal
p7761	Write protection / Write protection
p7770	NVRAM action / NVRAM action
p8550	AOP LOCAL/REMOTE / AOP LOCAL/REMOTE
p8829	CBE20 remote controller number / CBE20 rem ctrl num
p9210	Flashing component number / Flash comp_no.
p9211	Flash function / Flash fct.
p9484	BICO interconnections search signal source / BICO S_src srch

### 1.4.2 Parameters with "KHP\_WRITE\_NO\_LOCK"

The following list contains the parameters with the "KHP\_WRITE\_NO\_LOCK" attribute.

These parameters are not affected by the know-how protection.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: KHP\_WRITE\_NO\_LOCK

p0003	BOP access level / BOP acc_level
p0009	Device commissioning parameter filter / Dev comm par_filt
p0124[0...n]	Power unit detection via LED / PU detection LED
p0124[0...23]	Main component detection using LED / M_comp detect LED
p0144[0...n]	Sensor Module detection via LED / SM detection LED
p0154	DRIVE-CLiQ Hub Module detection via LED / Hub detection LED
p0154	Terminal Module detection via LED / TM detection LED
p0972	Drive unit reset / Drv_unit reset
p0976	Reset and load all parameters / Reset load all par
p0977	Save all parameters / Save all par
p2035	Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no
p2102	BI: Acknowledge all faults / Ackn all faults
p2111	Alarm counter / Alarm counter
p3100	RTC time stamp mode / RTC t_stamp mode
p3101[0...1]	RTC set UTC time / RTC set UTC
p3103	RTC synchronization source / RTC sync_source
p3950	Service parameter / Serv. par.
p3981	Faults, acknowledge drive object / Faults ackn DO
p3985	Master control mode selection / PcCtrl mode select
p7761	Write protection / Write protection
p7770	NVRAM action / NVRAM action
p8550	AOP LOCAL/REMOTE / AOP LOCAL/REMOTE
p8829	CBE20 remote controller number / CBE20 rem ctrl num
p9210	Flashing component number / Flash comp_no.
p9211	Flash function / Flash fct.
p9484	BICO interconnections search signal source / BICO S_src srch

### 1.4.3 Parameters with "KHP\_ACTIVE\_READ"

The following list contains the parameters with the "KHP\_ACTIVE\_READ" attribute.

These parameters can also be read with activated know-how protection.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: KHP\_ACTIVE\_READ

p0015	Macro drive object / Macro DO
p0015	Macro drive unit / Macro drv unit
p0100	IEC/NEMA mot stds / IEC/NEMA mot stds
p0101[0...23]	Drive object numbers / DO numbers
p0103[0...23]	Application-specific view / Appl_spec view
p0105	Activate/de-activate drive object / DO act/deact
p0107[0...23]	Drive object type / DO type
p0108[0...23]	Drive objects, function module / DO function module
p0120	Number of Power unit Data Sets (PDS) / PDS count
p0121[0...n]	Power unit component number / PU comp_no
p0125[0...n]	Activate/de-activate power unit components / PU_comp act/deact
p0130	Number of Motor Data Sets (MDS) / MDS count

p0131[0...n]	Motor component number / Mot comp_no
p0140	Number of Encoder Data Sets (EDS) / EDS count
p0141[0...n]	Encoder interface (Sensor Module) component number / Enc_intf comp_no
p0142[0...n]	Encoder component number / Encoder comp_no
p0145[0...n]	Activate/de-activate encoder interface / Enc_intf act/deact
p0150	Number of VSM data sets / VSM dat_sets qty.
p0151[0...1]	DRIVE-CLiQ Hub Module component number / Hub comp_no
p0151	Terminal Module component number / TM comp_no
p0151[0...n]	Voltage Sensing Module component number / VSM comp_no
p0161	Option board, component number / Opt board comp_no
p0170	Number of Command Data Sets (CDS) / CDS count
p0180	Number of Drive Data Sets (DDS) / DDS count
p0199[0...24]	Drive object name / DO name
p0300[0...n]	Motor type selection / Mot type sel
p0304[0...n]	Rated motor voltage / Mot U_rated
p0305[0...n]	Rated motor current / Mot I_rated
p0349	System of units, motor equivalent circuit diagram data / Unit_sys mot ESB
p0400[0...n]	Encoder type selection / Enc_typ sel
p0505	Selecting the system of units / Unit sys select
p0595	Technological unit selection / Tech unit select
p0806	BI: Inhibit master control / PcCtrl inhibit
p0864	BI: Infeed operation / INF operation
p0922	IF1 PROFIdrive telegram selection / IF1 PD Telegr_sel
p0978[0...24]	List of drive objects / List of the DO
p1080[0...n]	Minimum speed / n_min
p1082[0...n]	Maximum speed / n_max
p1520[0...n]	CO: Torque limit upper / M_max upper
p2000	Reference frequency / f_ref
p2000	Reference speed reference frequency / n_ref f_ref
p2000	Reference velocity, reference frequency / v_ref f_ref
p2001	Reference voltage / Reference voltage
p2002	Reference current / I_ref
p2003	Reference torque / M_ref
p2005	Reference angle / Reference angle
p2006	Reference temp / Ref temp
p2007	Reference acceleration / a_ref
p2030	Field bus int protocol selection / Field bus protocol
p2038	IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode
p2079	IF1 PROFIdrive PZD telegram selection extended / IF1 PD PZD tel ext
p4956[0...n]	OA application activation / OA act
p7763	KHP OEM exception list number of indices for p7764 / KHP OEM qty p7764
p7764[0...n]	KHP OEM exception list / KHP OEM excep list
p7852	Number of indices for r7853 / Qty indices r7853
p9500	SI Motion monitoring clock cycle (Control Unit) / SI Mtn clock CU
p9601	SI enable, functions integrated in the drive (Control Unit) / SI enable fct CU
p9810	SI PROFIsafe address (Motor Module) / SI PROFIsafe MM
p9902	Target topology number of indices / TargetTopo indices

2.23	Terminal Module 31 (TM31)	2-1182

2.24	Terminal Module 150 (TM150)	2-1192
2.25	Voltage Sensing Module (VSM)	2-1196
2.26	Basic Operator Panel 20 (BOP20)	2-1199

## 2.1 Table of contents

<b>2.2 Explanations on the function diagrams</b>	2-980
1020 – Explanation of the symbols (Part 1)	2-981
1021 – Explanation of the symbols (Part 2)	2-982
1022 – Explanation of the symbols (Part 3)	2-983
1030 – Handling BICO technology	2-984
<b>2.3 Overviews</b>	2-985
1510 – CU320-2 input/output terminals	2-986
1520 – PROFIdrive	2-987
1530 – Internal control/status words, data sets	2-988
1550 – Setpoint channel	2-989
1680 – Vector control, encoder evaluations (position, speed, temperature)	2-990
1690 – Vector control, V/f control	2-991
1700 – Vector control, speed control and generation of the torque limits	2-992
1710 – Vector control, current control	2-993
1750 – Monitoring functions, faults, alarms	2-994
1773 – Basic Infeed	2-995
1790 – Terminal Board 30 (TB30)	2-996
1840 – Terminal Module 31 (TM31)	2-997
1850 – Terminal Module 54F (TM54F)	2-998
<b>2.4 CU320-2 input/output terminals</b>	2-999
2120 – Digital inputs, electrically isolated (DI 0 ... DI 3, DI 16, DI 17)	2-1000
2121 – Digital inputs, electrically isolated (DI 4 ... DI 7, DI 20, DI 21)	2-1001
2130 – Digital inputs/outputs, bidirectional (DI/DO 8 ... DI/DO 9)	2-1002
2131 – Digital inputs/outputs, bidirectional (DI/DO 10 ... DI/DO 11)	2-1003
2132 – Digital inputs/outputs, bidirectional (DI/DO 12 ... DI/DO 13)	2-1004
2133 – Digital inputs/outputs, bidirectional (DI/DO 14 ... DI/DO 15)	2-1005
<b>2.5 CU_LINK</b>	2-1006
2211 – Data transfer	2-1007
<b>2.6 PROFIdrive</b>	2-1008
2410 – PROFIBUS (PB) / PROFINET (PN), addresses and diagnostics	2-1010
2415 – Standard telegrams and process data 1	2-1011

2416 – Standard telegrams and process data 2 .....	2-1012
2419 – Manufacturer-specific telegrams and process data 1 .....	2-1013
2420 – Manufacturer-specific telegrams and process data 2 .....	2-1014
2421 – Manufacturer-specific telegrams and process data 3 .....	2-1015
2422 – Manufacturer-specific telegrams and process data 4 .....	2-1016
2423 – Manufacturer-specific/free telegrams and process data .....	2-1017
2425 – STW1_BM control word metal industry interconnection .....	2-1018
2426 – STW2_BM control word metal industry interconnection .....	2-1019
2427 – E_STW1_BM control word infeed metal industry interconnection .....	2-1020
2428 – ZSW1_BM status word metal industry interconnection .....	2-1021
2429 – ZSW2_BM status word metal industry interconnection .....	2-1022
2430 – E_ZSW1_BM control word infeed metal industry interconnection .....	2-1023
2439 – PZD receive signals, interconnection, profile-specific .....	2-1024
2440 – PZD receive signals, interconnection, manufacturer-specific .....	2-1025
2441 – STW1 control word interconnection (p2038 = 2) .....	2-1026
2442 – STW1 control word interconnection (p2038 = 0) .....	2-1027
2444 – STW2 control word interconnection (p2038 = 0) .....	2-1028
2447 – E_STW1 control word infeed interconnection .....	2-1029
2449 – PZD send signals, interconnection, profile-specific .....	2-1030
2450 – PZD send signals interconnection manufacturer-specific .....	2-1031
2451 – ZSW1 status word interconnection (p2038 = 2) .....	2-1032
2452 – ZSW1 status word interconnection (p2038 = 0) .....	2-1033
2454 – ZSW2 status word interconnection (p2038 = 0) .....	2-1034
2457 – E_ZSW1 status word infeed interconnection .....	2-1035
2468 – IF1 receive telegram, free interconnection via BICO (p0922 = 999) .....	2-1036
2470 – IF1 send telegram, free interconnection via BICO (p0922 = 999) .....	2-1037
2472 – IF1 status words, free interconnection .....	2-1038
2481 – IF1 receive telegram, free interconnection via BICO (p0922 = 999) .....	2-1039
2483 – IF1 send telegram, free interconnection via BICO (p0922 = 999) .....	2-1040
2485 – IF2 receive telegram, free interconnection via BICO .....	2-1041
2487 – IF2 send telegram, free interconnection .....	2-1042
2489 – IF2 status words, free interconnection .....	2-1043
2491 – IF2 receive telegram, free interconnection .....	2-1044
2493 – IF2 send telegram, free interconnection .....	2-1045
2495 – CU_STW1 control word 1, Control Unit interconnection .....	2-1046

2496 – CU_ZSW1 status word 1, Control Unit interconnection . . . . .	2-1047
2497 – A_DIGITAL interconnection . . . . .	2-1048
2498 – E_DIGITAL interconnection . . . . .	2-1049
2499 – A_DIGITAL_1 interconnection . . . . .	2-1050
2500 – E_DIGITAL_1 interconnection . . . . .	2-1051
<b>2.7 Internal control/status words . . . . .</b>	<b>2-1052</b>
2501 – Control word, sequence control . . . . .	2-1053
2503 – Status word, sequence control . . . . .	2-1054
2505 – Control word, setpoint channel . . . . .	2-1055
2520 – Control word, speed controller . . . . .	2-1056
2522 – Status word, speed controller . . . . .	2-1057
2526 – Status word, closed-loop control . . . . .	2-1058
2530 – Status word, current control . . . . .	2-1059
2534 – Status word, monitoring functions 1 . . . . .	2-1060
2536 – Status word, monitoring functions 2 . . . . .	2-1061
2537 – Status word, monitoring functions 3 . . . . .	2-1062
2546 – Control word, faults/alarms . . . . .	2-1063
2548 – Status word, faults/alarms 1 and 2 . . . . .	2-1064
<b>2.8 Sequence control . . . . .</b>	<b>2-1065</b>
2610 – Sequencer . . . . .	2-1066
2634 – Missing enable signals, line contactor control, logic operation . . . . .	2-1067
<b>2.9 Brake control . . . . .</b>	<b>2-1068</b>
2701 – Basic brake control (r0108.14 = 0) . . . . .	2-1069
2704 – Extended brake control, zero-speed detection (r0108.14 = 1) . . . . .	2-1070
2707 – Extended brake control, open/close brake (r0108.14 = 1) . . . . .	2-1071
2711 – Extended brake control, signal outputs (r0108.14 = 1) . . . . .	2-1072
<b>2.10 Safety Integrated Basic Functions . . . . .</b>	<b>2-1073</b>
2800 – Parameter manager . . . . .	2-1074
2802 – Monitoring and faults/alarms . . . . .	2-1075
2804 – Status words . . . . .	2-1076
2810 – STO (Safe Torque Off), SS1 (Safe Stop 1) . . . . .	2-1077
2811 – STO (Safe Torque Off), safe pulse suppression . . . . .	2-1078
2814 – SBC (Safe Brake Control), SBA (Safe Brake Adapter) . . . . .	2-1079

<b>2.11 Safety Integrated Extended Functions</b> .....	2-1080
2820 – SLS (Safely-Limited Speed) .....	2-1081
2822 – SLP (Safely-Limited Position) .....	2-1082
2825 – SS1, SS2, SOS, internal STOP B, C, D, F .....	2-1083
2840 – Control word and status word .....	2-1084
2846 – Parameter manager .....	2-1085
2847 – TM54F parameter manager .....	2-1086
2848 – TM54F configuration, F-DI/F-DO test .....	2-1087
2850 – TM54F (F-DI 0 ... F-DI 4) .....	2-1088
2851 – TM54F (F-DI 5 ... F-DI 9) .....	2-1089
2853 – TM54F (F-DO 0 ... F-DO 3, DI 20 ... DI 23) .....	2-1090
2855 – TM54F control interface (p9601.2 = 1 & p9601.3 = 0) .....	2-1091
2856 – TM54F Safe State selection .....	2-1092
2857 – TM54F assignment (F-DO 0 ... F-DO 3) .....	2-1093
2860 – SSM (Safe Speed Monitor) .....	2-1094
2861 – SDI (Safe Direction) .....	2-1095
<b>2.12 Setpoint channel</b> .....	2-1096
3010 – Fixed speed setpoints .....	2-1097
3020 – Motorized potentiometer .....	2-1098
3030 – Main/supplementary setpoint, setpoint scaling, jogging .....	2-1099
3040 – Direction limitation and direction reversal .....	2-1100
3050 – Skip frequency bands and speed limitations .....	2-1101
3060 – Basic ramp-function generator .....	2-1102
3070 – Extended ramp-function generator .....	2-1103
3080 – Ramp-function generator selection, status word, tracking .....	2-1104
<b>2.13 Encoder evaluation</b> .....	2-1105
4704 – Raw signal sensing .....	2-1106
4715 – Speed actual value and pole position sensing, motor encoder ASM/SM (encoder 1) .....	2-1107
<b>2.14 Vector control</b> .....	2-1108
6030 – Speed setpoint, droop .....	2-1109
6031 – Pre-control balancing, reference/acceleration model .....	2-1110
6040 – Speed controller with/without encoder .....	2-1111
6050 – Speed controller adaptation (Kp_n/Tn_n adaptation) .....	2-1112

6060 – Torque setpoint . . . . .	2-1113
6220 – Vdc_max controller and Vdc_min controller . . . . .	2-1114
6300 – V/f characteristic and voltage boost . . . . .	2-1115
6310 – Resonance damping and slip compensation . . . . .	2-1116
6320 – Vdc_max controller and Vdc_min controller (U/f) . . . . .	2-1117
6490 – Speed control configuration . . . . .	2-1118
6491 – Flux control configuration . . . . .	2-1119
6630 – Upper/lower torque limit . . . . .	2-1120
6640 – Current/power/torque limits . . . . .	2-1121
6710 – Current setpoint filter . . . . .	2-1122
6714 – Iq and Id controller . . . . .	2-1123
6721 – Id setpoint (PEM, p0300 = 2) . . . . .	2-1124
6722 – Field weakening characteristic, Id setpoint (ASM, p0300 = 1) . . . . .	2-1125
6723 – Field weakening controller, flux controller (ASM, p0300 = 1) . . . . .	2-1126
6724 – Field weakening controller (PEM, p0300 = 2) . . . . .	2-1127
6730 – Interface to the Motor Module (ASM, p0300 = 1) . . . . .	2-1128
6731 – Interface to the Motor Module (PEM, p0300 = 2) . . . . .	2-1129
6799 – Display signals . . . . .	2-1130
<b>2.15 Technology functions . . . . .</b>	<b>2-1131</b>
7010 – Friction characteristic . . . . .	2-1132
7014 – External Armature Short-Circuit (EASC, p0300 = 2xx or 4xx) . . . . .	2-1133
7016 – Internal Armature Short-Circuit (IASC, p0300 = 2xx or 4xx) . . . . .	2-1134
7017 – DC braking (p0300 = 1xx) . . . . .	2-1135
7020 – Synchronization . . . . .	2-1136
<b>2.16 Technology controller . . . . .</b>	<b>2-1137</b>
7950 – Fixed values, binary selection (r0108.16 = 1 and p2216 = 2) . . . . .	2-1138
7951 – Fixed values, direct selection (r0108.16 = 1 and p2216 = 1) . . . . .	2-1139
7954 – Motorized potentiometer (r0108.16 = 1) . . . . .	2-1140
7958 – Closed-loop control (r0108.16 = 1) . . . . .	2-1141
7960 – DC-link voltage controller (r0108.16 = 1) . . . . .	2-1142
<b>2.17 Signals and monitoring functions . . . . .</b>	<b>2-1143</b>
8010 – Speed signals 1 . . . . .	2-1144
8011 – Speed signals 2 . . . . .	2-1145
8012 – Torque signals, motor locked/stalled . . . . .	2-1146

8013 – Load monitoring (r0108.17 = 1) .....	2-1147
8014 – Thermal monitoring, power unit .....	2-1148
8016 – Thermal monitoring, motor .....	2-1149
8017 – Thermal motor models (p0300 = xxx) .....	2-1150
<b>2.18 Diagnostics</b> .....	2-1151
8060 – Fault buffer .....	2-1152
8065 – Alarm buffer .....	2-1153
8070 – Fault/alarm trigger word (r2129) .....	2-1154
8075 – Fault/alarm configuration .....	2-1155
8134 – Measuring sockets .....	2-1156
<b>2.19 Data sets</b> .....	2-1157
8560 – Command Data Sets (CDS) .....	2-1158
8565 – Drive Data Sets (DDS) .....	2-1159
8570 – Encoder Data Sets (EDS) .....	2-1160
8575 – Motor Data Sets (MDS) .....	2-1161
8580 – Power unit Data Sets (PDS) .....	2-1162
<b>2.20 Basic Infeed</b> .....	2-1163
8720 – Control word, sequence control infeed .....	2-1164
8726 – Status word, sequence control infeed .....	2-1165
8732 – Sequencer .....	2-1166
8734 – Missing enable signals, line contactor control .....	2-1167
8750 – Interface to the Basic Infeed power unit (control signals, actual values) .....	2-1168
8760 – Signals and monitoring functions (p3400.0 = 0) .....	2-1169
<b>2.21 Terminal Board 30 (TB30)</b> .....	2-1170
9100 – Digital inputs, electrically isolated (DI 0 ... DI 3) .....	2-1171
9102 – Digital outputs, electrically isolated (DO 0 ... DO 3) .....	2-1172
9104 – Analog inputs (AI 0 ... AI 1) .....	2-1173
9106 – Analog outputs (AO 0 ... AO 1) .....	2-1174
<b>2.22 Communication Board CAN10 (CBC10)</b> .....	2-1175
9204 – Receive telegram, free PDO mapping (p8744 = 2) .....	2-1176
9206 – Receive telegram, Predefined Connection Set (p8744 = 1) .....	2-1177
9208 – Send telegram, free PDO mapping (p8744 = 2) .....	2-1178
9210 – Send telegram, Predefined Connection Set (p8744 = 1) .....	2-1179

9220 – Control word, CANopen .....	2-1180
9226 – Status word, CANopen .....	2-1181
<b>2.23 Terminal Module 31 (TM31) .....</b>	<b>2-1182</b>
9550 – Digital inputs, electrically isolated (DI 0 ... DI 3) .....	2-1183
9552 – Digital inputs, electrically isolated (DI 4 ... DI 7) .....	2-1184
9556 – Digital relay outputs, electrically isolated (DO 0 ... DO 1) .....	2-1185
9560 – Digital inputs/outputs, bidirectional (DI/DO 8 ... DI/DO 9) .....	2-1186
9562 – Digital inputs/outputs, bidirectional (DI/DO 10 ... DI/DO 11) .....	2-1187
9566 – Analog input 0 (AI 0) .....	2-1188
9568 – Analog input 1 (AI 1) .....	2-1189
9572 – Analog outputs (AO 0 ... AO 1) .....	2-1190
9576 – Temperature evaluation (KTY/PTC) .....	2-1191
<b>2.24 Terminal Module 150 (TM150) .....</b>	<b>2-1192</b>
9625 – Temperature evaluation structure (channel 0 ... 11) .....	2-1193
9626 – Temperature evaluation 1x2, 3, 4-wire (channel 0 ... 5) .....	2-1194
9627 – Temperature evaluation 2x2-wire (channel 0 ... 11) .....	2-1195
<b>2.25 Voltage Sensing Module (VSM) .....</b>	<b>2-1196</b>
9880 – Analog inputs (AI 0 ... AI 3) .....	2-1197
9886 – Temperature evaluation .....	2-1198
<b>2.26 Basic Operator Panel 20 (BOP20) .....</b>	<b>2-1199</b>
9912 – Control word interconnection .....	2-1200

## 2.2 Explanations on the function diagrams

### Function diagrams

1020 – Explanation of the symbols (Part 1)	2-981
1021 – Explanation of the symbols (Part 2)	2-982
1022 – Explanation of the symbols (Part 3)	2-983
1030 – Handling BICO technology	2-984

## Handling BICO technology

### Binector:

Binectors are binary signals that can be freely interconnected (BO = Binector Output). They represent a bit of a "BO:" display parameter (e.g. bit 15 from r0723).

### Connector:

Connectors are bit fields or numerical values that can be freely interconnected (e.g. "analog signals", like percentage variables, speeds or torques). Connectors are also "CO:" display parameters (CO = Connector Output).

### Parameterization:

At the signal destination, the required binector or connector is selected using appropriate parameters:

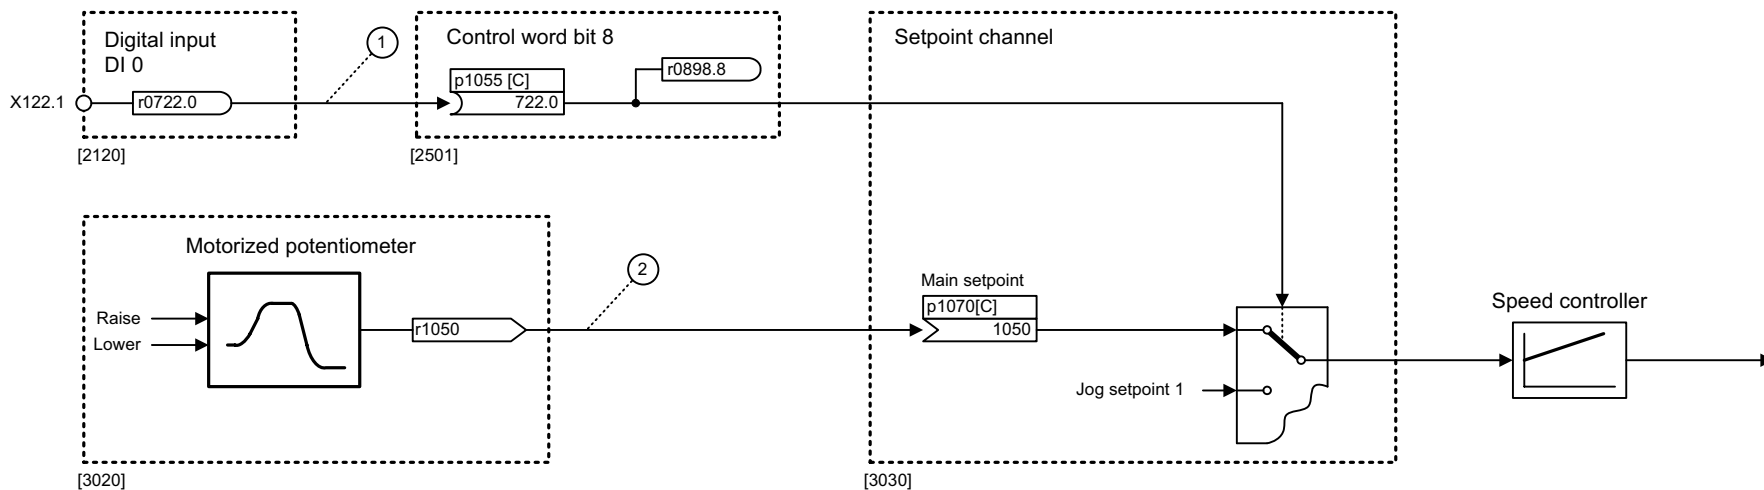

"BI:" parameter for binectors (BI = Binector Input)

or

"CI:" parameter for connectors (CI = Connector Input)

### Example:

The main setpoint for the speed controller (CI: p1070) should be received from the output of the motorized potentiometer (CO: r1050) and the "jog" command (BI: p1055) from digital input DI 0 (BO: r0722.0, X122.1 terminal) on the CU320.

### Parameterizing steps:

- ① p1055[0] = 722.0      Terminal X122.1 acts as "Jog bit 0".
- ② p1070[0] = 1050      The output of the motorized potentiometer acts as main setpoint for the speed controller.

## CU-specific functions

## Setting the PROFIBUS address

PB PZD state Setpoint failure

PD PZD state Clock cycle synchronous operation active

PB address

p0918 (126)

### Address switches on the Control Unit

DP ADDRESS

Example: 15 hex = 21 dez

### Setting the PROFIBUS address:

- Via p0918:  
Set the address switches DP H and DP L to 00 hex (= 0 dez), 7F hex (= 127 dez), 80 hex or FF hex.
  - Via the address switches DP H and DP L:  
Set the desired address as hexadecimal value between 01 hex (= 1 dez) und 7E hex (= 126 dez).
- Any change only becomes effective after a POWER ON. PB ac

PROFINET address

PN Name of Station  
r61000[0...239]

PN IP of Station  
r61001[0...3]

### Drive-specific functions (available once for each drive object)

(PROFIBUS sampling time)

Refer to [1020.7]

### Monitoring functions

Cyclic telegrams from the master

<7>  
Sign-of-life from the  
clock cycle  
synchronous master

### Diagnostic parameters

## Alarms

A01920 "PROFIBUS: Interruption cyclic connection"

t = response <4> No cyclic telegrams from the master

The diagram shows a ladder logic circuit for the failure F01912. It begins with a box labeled "Detecting missing signs-of-life in a series". A line from this box goes to a set coil (S) for F01912. Another line from the box goes to a normally open contact labeled "n". This contact is in series with a normally open contact labeled "n > p0925". This is followed by a normally open contact labeled "n = 65535". Then comes a normally open contact labeled "p0925 (1)". This is followed by a normally open contact labeled "PD SoL\_tol 0...65535". This is followed by a normally open contact labeled "&". This is followed by a normally open contact labeled "<2>". This is followed by a normally open contact labeled "<5>". Finally, the line goes to a set coil (S) for F01912.

→ A01900 "PROFIBUS: Configuration telegram error"  
A01901 "PROFIBUS: Parameterizing telegram error"  
A01902 "IF1: PB/PN clock cycle synchronous operation parameterization not permissible"

r2076 IF1 diag offs send

- <1> The monitoring function is only executed after at least one "valid" cyclic telegram has been received. "Valid" means: the master is in operation and net data are transmitted.
- <2> The monitoring function is only executed after the first sign-of-life has been received.
- <3> Sign-of-life monitoring not effective for p0925 = 65535.
- <4> The response monitoring time  $t_{\text{response}}$  is automatically defined when configuring PROFIBUS/PROFINET (e.g. HW Config made by SIEMENS).
- <5> Only for the clock-cycle synchronous operation of the SERVO and VECTOR drive object.
- <6> p2045 is automatically interconnected when the telegram is selected.
- <7> Only for SINAMICS S120/S150.  
(no clock cycle synchronous operation with G130/G150).
- <8> Only for cyclic operation.
- <9> Not when the master CPU stops.

&lt;1&gt; Depending on the drive object, only specific telegrams can be used.

&lt;2&gt; If p0922 = 999 is changed to another value, the telegram is automatically assigned as specified in [2415] - [2423].

If p0922 ≠ 999 is changed to p0922 = 999, the "old" telegram assignment is maintained as specified in [2415] - [2423]!

&lt;3&gt; Can be freely connected.

&lt;4&gt; The maximum number of PZD words depends on the drive object type.

&lt;5&gt; Only for SINAMICS S120/S150.

 = Position encoder signal

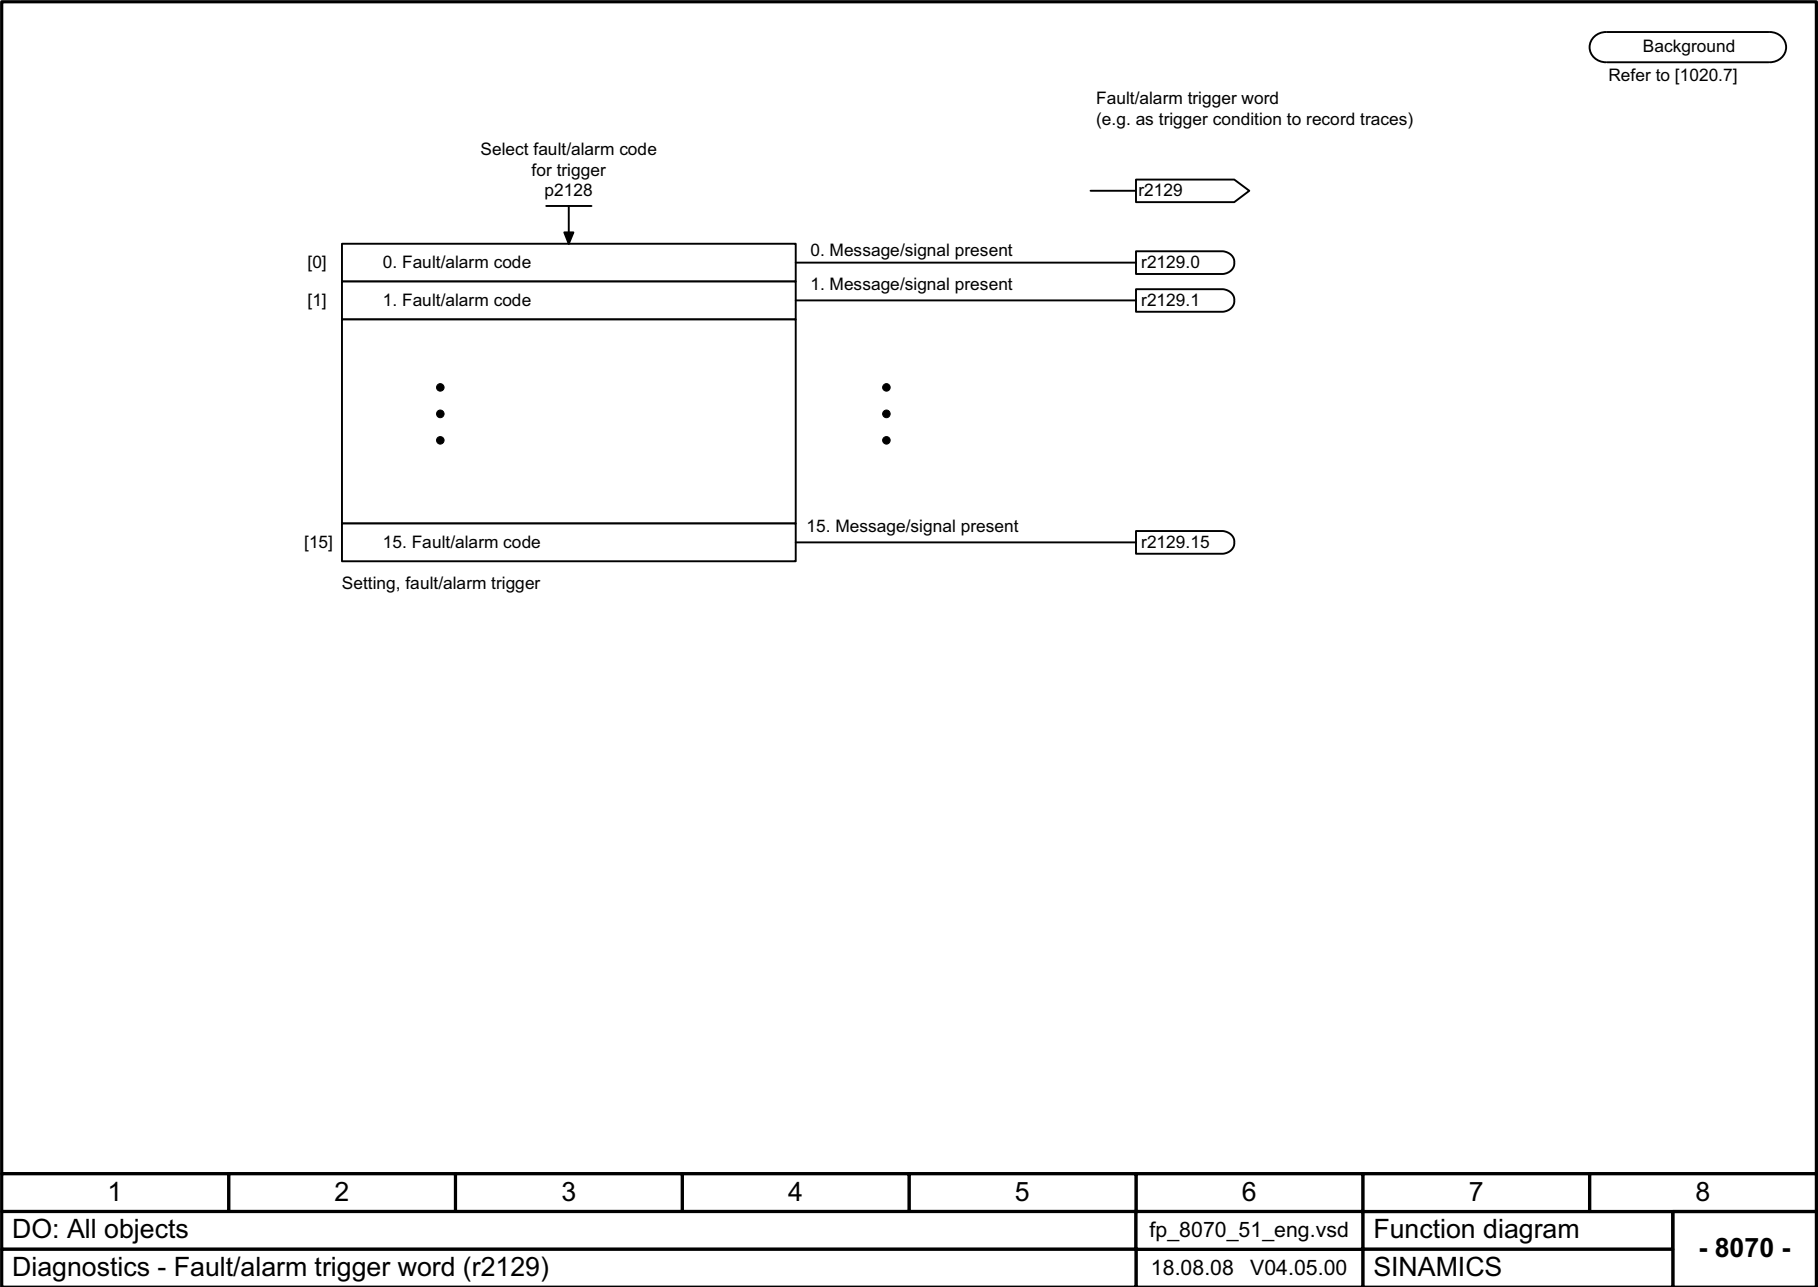

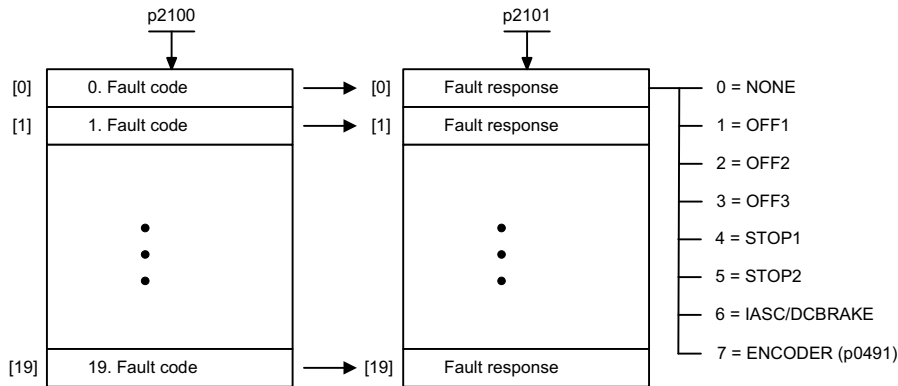

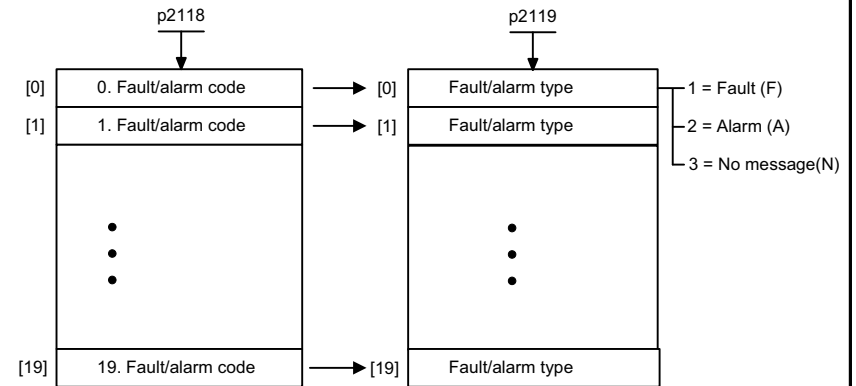

Fig. 2-157 8070 – Fault/alarm trigger word (r2129)

Background  
Refer to [1020.7]

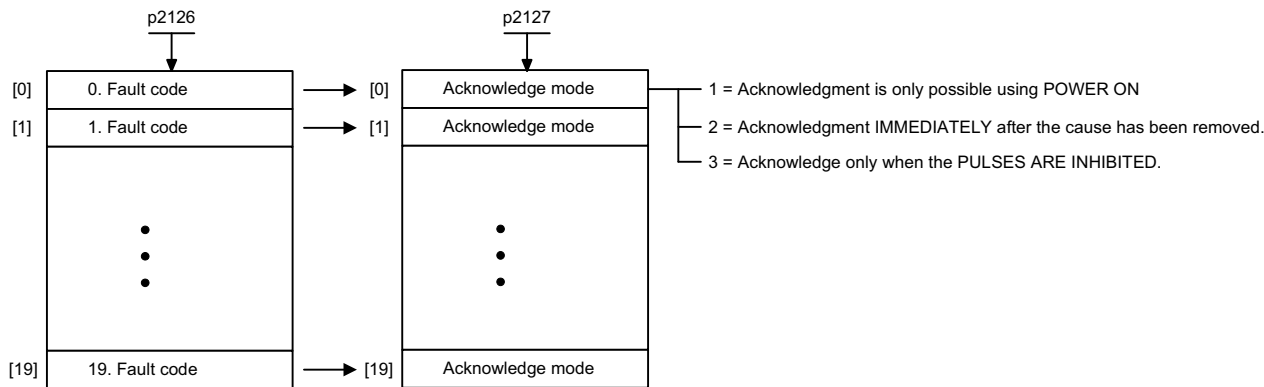

### Changing the fault response for maximum 20 faults <1>

### Changing the message type - fault <==> alarm for maximum 20 faults/alarms <1>

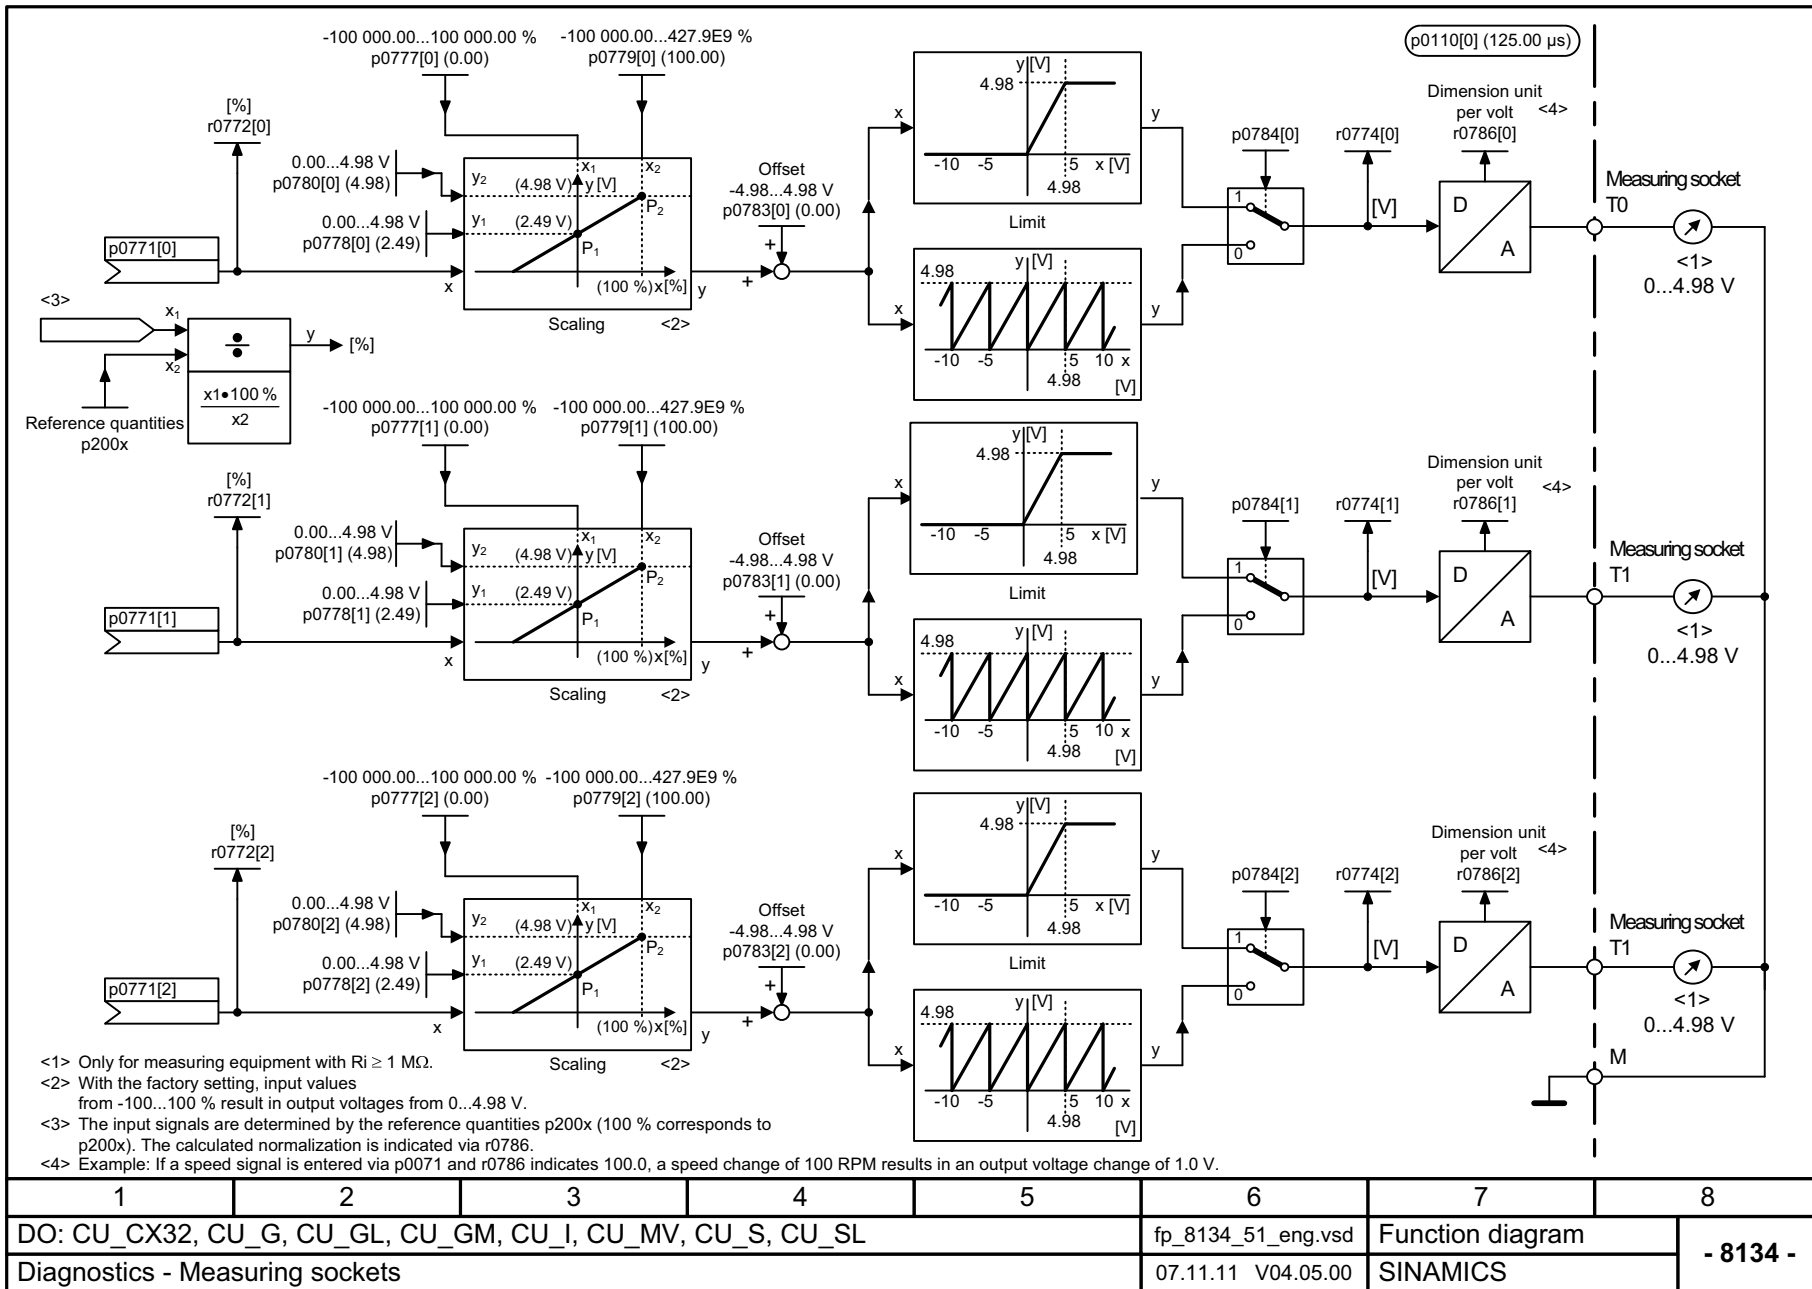

### Changing the acknowledge mode for maximum 20 faults <1>

<1> The fault response, acknowledge mode and message type for all faults and alarms are set to meaningful default values in the factory setting. Changes that may be required are only possible in specific value ranges specified by SIEMENS. When the message type is changed, the supplementary information is transferred from fault value r0949 to alarm value r2124 and vice versa.

# Faults and alarms

# 3

## Contents

3.1	Overview of faults and alarms	3-1202
3.2	List of faults and alarms	3-1212

## 3.1 Overview of faults and alarms

### 3.1.1 General information on faults and alarms

#### Fault and alarm displays

If a fault occurs, the drive indicates this by issuing corresponding fault(s) and/or alarm(s).

The following methods for displaying faults and alarms are available:

- Display via the fault and alarm buffer with PROFIBUS.
- Display online via the commissioning software.

#### Differences between faults and alarms

The differences between faults and alarms are as follows:

Table 3-1 Differences between faults and alarms

Type	Description
Faults	<p>What happens when a fault occurs?</p> <ul style="list-style-type: none"> <li>• The appropriate fault reaction is triggered.</li> <li>• Status signal ZSW1.3 is set.</li> <li>• The fault is entered in the fault buffer.</li> </ul> <p>How are faults eliminated?</p> <ul style="list-style-type: none"> <li>• Remove the original cause of the fault.</li> <li>• Acknowledge the fault.</li> </ul>
Alarms	<p>What happens when an alarm occurs?</p> <ul style="list-style-type: none"> <li>• Status signal ZSW1.7 is set.</li> <li>• The alarm is entered in the alarm buffer.</li> </ul> <p>How are alarms eliminated?</p> <ul style="list-style-type: none"> <li>• Alarms acknowledge themselves. If the cause of the alarm is no longer present, they automatically reset themselves.</li> </ul>

## Fault reactions

The following fault reactions are defined:

Table 3-2 Fault reactions

List	PROFI-drive	Reaction	Description
NONE	-	None	<p>No reaction when a fault occurs.</p> <p><b>Note:</b> When the "Basic positioner" function module is activated (r0108.4 = 1), the following applies: When a fault occurs with fault reaction "NONE", an active traversing task is interrupted and the system switches to tracking mode until the fault has been rectified and acknowledged.</p>
OFF1	ON/ OFF	Brake along the ramp-function generator deceleration ramp followed by pulse disable	<p><b>Speed control (p1300 = 20, 21)</b></p> <ul style="list-style-type: none"> <li>• n_set = 0 is input immediately to brake the drive along the ramp-function generator deceleration ramp (p1121).</li> <li>• When zero speed is detected, the motor holding brake (if parameters have been assigned for it) is closed (p1215). The pulses are suppressed when the brake closing time (p1217) expires.</li> </ul> <p>Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint ≤ speed threshold (p1226) has expired.</p> <p><b>Closed-loop torque control (p1300 = 23)</b></p> <ul style="list-style-type: none"> <li>• The following applies for torque control: Reaction as for OFF2</li> <li>• When the system switches to torque control with p1501, the following applies: No separate braking reaction.</li> </ul> <p>If the actual speed value drops below the speed threshold (p1226) or the timer stage (p1227) has expired, the motor holding brake (if one is being used) is closed. The pulses are suppressed when the brake closing time (p1217) expires.</p>
OFF1_ DELAYED	-	As for OFF1, but delayed	<p>Faults with this fault reaction do not become effective until after the delay time set in p3136.</p> <p>The remaining time up to OFF1 is displayed in r3137.</p>
OFF2	COAST STOP	Internal/external pulse disable	<p><b>Closed-loop speed and torque control</b></p> <ul style="list-style-type: none"> <li>• Instantaneous pulse suppression, the drive "coasts" to a standstill.</li> <li>• The motor holding brake (if one is being used) is closed immediately.</li> <li>• "Switching on inhibited" is activated.</li> </ul>

Table 3-2 Fault reactions, continued

List	PROFI-drive	Reaction	Description
OFF3	QUICK STOP	Brake along the OFF3 deceleration ramp followed by pulse disable	<p><b>Speed control (p1300 = 20, 21)</b></p> <ul style="list-style-type: none"> <li>n_set = 0 is input immediately to brake the drive along the OFF3 deceleration ramp (p1135).</li> <li>When zero speed is detected, the motor holding brake (if parameters have been assigned for it) is closed. The pulses are suppressed when the closing time of the holding brake (p1217) expires.</li> </ul> <p>Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint ≤ speed threshold (p1226) has expired.</p> <ul style="list-style-type: none"> <li>"Switching on inhibited" is activated.</li> </ul> <p><b>Closed-loop torque control (p1300 = 23)</b></p> <ul style="list-style-type: none"> <li>Changeover to speed-controlled operation and other reactions as described for speed-controlled operation.</li> </ul>
STOP1	-	-	Under development
STOP2	-	n_set = 0	<ul style="list-style-type: none"> <li>n_set = 0 is input immediately to brake the drive along the OFF3 deceleration ramp (p1135).</li> <li>The drive remains in speed control mode.</li> </ul>
IASC/ DCBRAKE	-	-	<ul style="list-style-type: none"> <li>For synchronous motors, the following applies: If a fault occurs with this fault reaction, an internal armature short-circuit is triggered. The conditions for p1231 = 4 must be observed.</li> <li>For induction motors, the following applies: If a fault occurs with this fault reaction, DC braking is triggered. DC braking must have been commissioned (p1232, p1233, p1234).</li> </ul>
ENCODER	-	Internal/external pulse disable (p0491)	<p>The fault reaction ENCODER is applied as a function of the setting in p0491.</p> <p>Factory setting: p0491 = 0 → Encoder fault causes OFF2</p> <p><b>Notice:</b></p> <p>When changing p0491, it is imperative that the information in the description of this parameter is carefully observed.</p>

## Acknowledgement of faults

The list of faults and alarms specifies how to acknowledge each fault after the cause has been remedied.

Table 3-3 Acknowledgement of faults

Acknowledgement	Description								
POWER ON	<p>The fault is acknowledged by a POWER ON process (switch drive unit off and on again).</p> <p><b>Note:</b> If this action has not eliminated the fault cause, the fault is displayed again immediately after power up.</p>								
IMMEDIATELY	<p>Faults can be acknowledged on one drive object (Points 1 to 3) or on all drive objects (point 4) as follows:</p> <p>1 Acknowledge by setting parameter: p3981 = 0 --&gt; 1</p> <p>2 Acknowledge via binector inputs:</p> <table border="0"> <tr> <td>p2103</td> <td>BI: 1. Acknowledge faults</td> </tr> <tr> <td>p2104</td> <td>BI: 2. Acknowledge faults</td> </tr> <tr> <td>p2105</td> <td>BI: 3. Acknowledge faults</td> </tr> </table> <p>3 Acknowledge using PROFIBUS control signal: STW1.7 = 0 --&gt; 1 (edge)</p> <p>4 Acknowledge all faults</p> <table border="0"> <tr> <td>p2102</td> <td>BI: Acknowledge all faults</td> </tr> </table> <p>All of the faults on all of the drive objects of the drive system can be acknowledged using this binector input.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• These faults can also be acknowledged by a POWER ON operation.</li> <li>• If this action has not eliminated the fault cause, the fault will continue to be displayed after acknowledgement.</li> <li>• Safety Integrated faults The "Safe standstill" (SH) function must be deselected before these faults are acknowledged.</li> </ul>	p2103	BI: 1. Acknowledge faults	p2104	BI: 2. Acknowledge faults	p2105	BI: 3. Acknowledge faults	p2102	BI: Acknowledge all faults
p2103	BI: 1. Acknowledge faults								
p2104	BI: 2. Acknowledge faults								
p2105	BI: 3. Acknowledge faults								
p2102	BI: Acknowledge all faults								
PULSE DISABLE	<p>The fault can only be acknowledged with a pulse disable (r0899.11 = 0).</p> <p>The same options are available for acknowledging as described under acknowledgement with IMMEDIATELY.</p>								

### **Saving the fault buffer when switching off**

The contents of the fault buffer are saved to the non-volatile memory when the Control Unit is switched off, i.e. the fault buffer history is still available when the unit is switched on again.

The fault buffer of a drive object comprises the following parameters:

- r0945[0...63], r0947[0...63], r0948[0...63], r0949[0...63]
- r2109[0...63], r2130[0...63], r2133[0...63], r2136[0...63]

The fault buffer contents can be deleted manually as follows:

- Delete fault buffer for all drive objects:  
p2147 = 1 --> p2147 = 0 is automatically set after execution.
- Delete fault buffer for a specific drive object:  
p0952 = 0 --> The parameter belongs to the specified drive object.

The fault buffer contents are automatically deleted when the following occurs:

- Restore factory setting (p0009 = 30 and p0976 = 1).
- Download with modified structure (e.g. number of drive objects changed).
- Power-up after other parameter values have been loaded (e.g. p0976 = 10).
- Upgrade firmware to later version.

### 3.1.2 Explanation of the list of faults and alarms

The data in the following example has been chosen at random. The information listed below is the maximum amount of information that a description can contain. Some of the information is optional.

The list of faults and alarms (See Section 3.2) is structured as follows:

----- Start of example -----	
<b>Axxxxx (F, N)</b>	<b>Fault location (optional): Name</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	List of objects.
<b>Reaction:</b>	NONE
<b>Acknowledgement:</b>	NONE
<b>Cause:</b>	Description of possible causes. Fault value (r0949, interpret format): or alarm value (r2124, interpret format): (optional) Information about fault or alarm values (optional).
<b>Remedy:</b>	Description of possible remedies.
Reaction to F:	A_INFEED: OFF2 (OFF1, NONE) SERVO: NONE (OFF1, OFF2, OFF3) VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledgement for F:	IMMEDIATELY (POWER ON)
Reaction to N:	NONE
Acknowledgement for N:	NONE
----- End of example -----	

<b>Axxxxx</b>	<b>Alarm xxxxx</b>
<b>Axxxxx (F, N)</b>	<b>Alarm xxxxx (message type can be changed to F or N)</b>
<b>Fxxxxx</b>	<b>Fault xxxxx</b>
<b>Fxxxxx (A, N)</b>	<b>Fault xxxxx (message type can be changed to F or N)</b>
<b>Nxxxxx</b>	<b>No message</b>
<b>Nxxxxx (A)</b>	<b>No message (message type can be changed to A)</b>
<b>Cxxxxx</b>	<b>Safety message (separate message buffer)</b>

A message comprises a letter followed by the relevant number.

The meaning of the letters is as follows:

- A means "Alarm".
- F means "Fault".
- N means "No message" or "Internal message" ("No report")
- C means "Safety message"

The optional brackets indicate whether the type specified for this message can be changed and which message types can be adjusted via parameters (p2118, p2119).

Information on reaction and acknowledgement is specified independently for a message with an adjustable message type (e.g. reaction to F, acknowledgement for F).

---

**Note:**

You can change the default properties of a fault or alarm by setting parameters.

The list of faults and alarms (see Section 3.2) provides information in relation to the properties of a message that have been set as standard. If the properties of a specific message are changed, the corresponding information may have to be modified in this list.

---

**Fault location (optional): Name**

The fault location (optional), the name of the fault or alarm and the message number are all used to identify the message (e.g. with the commissioning software).

**Message value:**

The information provided under the message value tells you about the composition of the fault/alarm value.

**Example:**

Message value: Component number: %1, fault cause: %2

This message value contains information about the component number and fault cause. The entries %1 and %2 are placeholders, which are filled appropriately in online operation (e.g. with the commissioning software).

**Drive object:**

Each message (fault/alarm) specifies the drive object in which it can be found.

A message can belong to either one, several, or all drive objects.

**Reaction: Default fault reaction (adjustable fault reaction)**

Specifies the default reaction in the event of a fault.

The optional brackets indicate whether the default fault reaction can be changed and which fault reactions can be adjusted via parameters (p2100, p2101).

**Note:**

See Section 3.1.1

**Acknowledgement: Default acknowledgement (adjustable acknowledgement)**

Specifies the default method of acknowledging faults after the cause has been eliminated.

The optional brackets indicate whether the default acknowledgement can be changed and which acknowledgement can be adjusted via parameters (p2126, p2127).

**Note:**

See Section 3.1.1

**Cause:**

Describes the possible causes of the fault/alarm. A fault or alarm value can also be specified (optional).

Fault value (r0949, format):

The fault value is entered in the fault buffer in r0949[0...63] and specifies additional, more precise information about a fault.

Alarm value (r2124, format):

The alarm value specifies additional, more precise information about an alarm.

The alarm value is entered in the alarm buffer in r2124[0...7] and specifies additional, more precise information about an alarm.

**Remedy:**

Describes the methods available for eliminating the cause of the active fault or alarm.

**Alarm**

In certain cases, service and maintenance personnel are responsible for choosing a suitable method to eliminate the cause of faults.

---

### 3.1.3 Number ranges of faults and alarms

**Note:**

The following number ranges represent an overview of all faults and alarms used in the SINAMICS drive family.

The faults and alarms for the product described in this List Manual are described in detail in Section 3.2.

Faults and alarms are organized into the following number ranges:

Table 3-4 Number ranges of faults and alarms

From	To	Range
1000	3999	Control Unit
4000	4999	Reserved
5000	5999	Power unit
6000	6899	Infeed
6900	6999	Braking Module
7000	7999	Drive
8000	8999	Option Board
9000	12999	Reserved
13000	13010	Licensing
13002	19999	Reserved
20000	29999	OEM
30000	30999	DRIVE-CLiQ component power unit
31000	31999	DRIVE-CLiQ component encoder 1
32000	32999	DRIVE-CLiQ component encoder 2  <b>Note:</b> Faults that occur are automatically output as an alarm if the encoder is parameterized as a direct measuring system and does not intervene in the motor control.
33000	33999	DRIVE-CLiQ component encoder 3  <b>Note:</b> Faults that occur are automatically output as an alarm if the encoder is parameterized as a direct measuring system and does not intervene in the motor control.
34000	34999	Voltage Sensing Module (VSM)
35000	35199	Terminal Module 54F (TM54F)
35200	35999	Terminal Module 31 (TM31)

## 3.2 List of faults and alarms

Product: SINAMICS G130/G150, Version: 4502400, Language: eng  
Objects: B\_INF, CU\_G130\_DP, CU\_G130\_PN, CU\_G150\_DP, CU\_G150\_PN, ENC, HUB, TB30, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G

<b>F01000</b>	<b>Internal software error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- evaluate fault buffer (r0945).</li> <li>- carry out a POWER ON (power off/on) for all components.</li> <li>- upgrade firmware to later version.</li> <li>- contact the Hotline.</li> <li>- replace the Control Unit.</li> </ul>
<b>F01001</b>	<b>FloatingPoint exception</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	An exception occurred during an operation with the FloatingPoint data type. The error may be caused by the base system or an OA application (e.g., FBLOCKS, DCC). Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting. Note: Refer to r9999 for further information about this fault. r9999[0]: Fault number. r9999[1]: Program counter at the time when the exception occurred. r9999[2]: Cause of the FloatingPoint exception. Bit 0 = 1: Operation invalid Bit 1 = 1: Division by zero Bit 2 = 1: Overflow Bit 3 = 1: Underflow Bit 4 = 1: Imprecise result
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- carry out a POWER ON (power off/on) for all components.</li> <li>- check configuration and signals of the blocks in FBLOCKS.</li> <li>- check configuration and signals of DCC charts.</li> <li>- upgrade firmware to later version.</li> <li>- contact the Hotline.</li> </ul>
<b>F01002</b>	<b>Internal software error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- carry out a POWER ON (power off/on) for all components.</li> <li>- upgrade firmware to later version.</li> <li>- contact the Hotline.</li> </ul>

---

**F01003      Acknowledgement delay when accessing the memory**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A memory area was accessed that does not return a "READY".  
Fault value (r0949, interpret hexadecimal):  
Only for internal Siemens troubleshooting.  
**Remedy:** - carry out a POWER ON (power off/on) for all components.  
- contact the Hotline.

---

**N01004 (F, A)      Internal software error**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** An internal software error has occurred.  
Fault value (r0949, hexadecimal):  
Only for internal Siemens troubleshooting.  
**Remedy:** - read out diagnostics parameter (r9999).  
- contact the Hotline.  
See also: r9999 (Software error internal supplementary diagnostics)  
Reaction upon F: OFF2  
Acknowl. upon F: POWER ON  
Reaction upon A: NONE  
Acknowl. upon A: NONE

---

**F01005      Firmware download for DRIVE-CLiQ component unsuccessful**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** It was not possible to download the firmware to a DRIVE-CLiQ component.  
Fault value (r0949, interpret hexadecimal):  
yyxxxx hex: yy = component number, xxxx = fault cause  
xxxx = 000B hex = 11 dec:  
DRIVE-CLiQ component has detected a checksum error.  
xxxx = 000F hex = 15 dec:  
The selected DRIVE-CLiQ component did not accept the contents of the firmware file.  
xxxx = 0012 hex = 18 dec:  
Firmware version is too old and is not accepted by the component.  
xxxx = 0013 hex = 19 dec:  
Firmware version is not suitable for the hardware release of the component.  
xxxx = 0065 hex = 101 dec:  
After several communication attempts, no response from the DRIVE-CLiQ component.  
xxxx = 008B hex = 139 dec:  
Initially, a new boot loader is loaded (must be repeated after POWER ON).  
xxxx = 008C hex = 140 dec:  
Firmware file for the DRIVE-CLiQ component not available on the memory card.  
xxxx = 008D hex = 141 dec:  
An inconsistent length of the firmware file was signaled. The firmware download may have been caused by a loss of connection to the firmware file. This can occur during a project download/reset in the case of a SINAMICS Integrated Control Unit, for example.  
xxxx = 008F hex = 143 dec:  
Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.  
xxxx = 0090 hex = 144 dec:  
When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card is defective.

xxxx = 0091 hex = 145 dec:  
 Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.  
 xxxx = 009C hex = 156 dec:  
 Component with the specified component number is not available (p7828).  
 xxxx = Additional values:  
 Only for internal Siemens troubleshooting.

**Remedy:**

- check the selected component number (p7828).
- check the DRIVE-CLiQ connection.
- save suitable firmware file for download in the directory "/siemens/sinamics/code/sac/".
- use a component with a suitable hardware version
- after POWER ON has been carried out again for the DRIVE-CLiQ component, download the firmware again.

Depending on p7826, the firmware will be automatically downloaded.

---

**A01006      Firmware update for DRIVE-CLiQ component required**

**Message value:** Component number: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The firmware of a DRIVE-CLiQ component must be updated as there is no suitable firmware or firmware version in the component for operation with the Control Unit.  
 Alarm value (r2124, interpret decimal):  
 Component number of the DRIVE-CLiQ component.

**Remedy:** Firmware update using the commissioning software:  
 The firmware version of all of the components on the "Version overview" page can be read in the Project Navigator under "Configuration" of the associated drive unit and an appropriate firmware update can be carried out.  
 Firmware update via parameter:  
 - take the component number from the alarm value and enter into p7828.  
 - start the firmware download with p7829 = 1.

---

**A01007      POWER ON for DRIVE-CLiQ component required**

**Message value:** Component number: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** A DRIVE-CLiQ component must be powered up again (POWER ON) (e.g. due to a firmware update).  
 Alarm value (r2124, interpret decimal):  
 Component number of the DRIVE-CLiQ component.  
 Note:  
 For a component number = 1, a POWER ON of the Control Unit is required.

**Remedy:**

- Switch off the power supply of the specified DRIVE-CLiQ component and switch it on again.
- For SINUMERIK, auto commissioning is prevented. In this case, a POWER ON is required for all components and the auto commissioning must be restarted.

---

**A01009 (N)      CU: Control module overtemperature**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The temperature (r0037[0]) of the control module (Control Unit) has exceeded the specified limit value.

**Remedy:**

- check the air intake for the Control Unit.
- check the Control Unit fan.

Note:  
 The alarm automatically disappears after the limit value has been undershot.

Reaction upon N: NONE  
 Acknowl. upon N: NONE

<b>F01010</b>	<b>Drive type unknown</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An unknown drive type was found. Fault value (r0949, interpret decimal): Drive object number (refer to p0101, p0107).
<b>Remedy:</b>	<ul style="list-style-type: none"><li>- replace Power Module.</li><li>- carry out a POWER ON (power off/on) for all components.</li><li>- upgrade firmware to later version.</li><li>- contact the Hotline.</li></ul>

---

<b>F01011 (N)</b>	<b>Download interrupted</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The project download was interrupted. Fault value (r0949, interpret decimal): 1: The user prematurely interrupted the project download. 2: The communication cable was interrupted (e.g. cable breakage, cable withdrawn). 3: The project download was prematurely ended by the commissioning software (e.g. STARTER, SCOUT). 100: Different versions between the firmware version and project files which were loaded by loading into the file system "Download from card". Note: The response to an interrupted download is the state "first commissioning".
<b>Remedy:</b>	<ul style="list-style-type: none"><li>- check the communication cable.</li><li>- download the project again.</li><li>- boot from previously saved files (power-down/power-up or p0976).</li><li>- when loading into the file system (download from card), use the matching version.</li></ul>
Reaction upon N:	NONE
Acknowl. upon N:	NONE

---

<b>F01012 (N)</b>	<b>Project conversion error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (NONE)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	When converting the project of an older firmware version, an error occurred. Fault value (r0949, interpret decimal): Parameter number of the parameter causing the error. For fault value = 600, the following applies: The temperature evaluation is no longer assigned to the power unit but to the encoder evaluation. Notice: Monitoring of the motor temperature is no longer ensured.
<b>Remedy:</b>	Check the parameter indicated in the fault value and correctly adjust it accordingly. For fault value = 600: Parameter p0600 must be set to the values 1, 2 or 3 in accordance with the assignment of the internal encoder evaluation to the encoder interface. Value 1 means: The internal encoder evaluation is assigned to the encoder interface 1 via p0187. Value 2 means: The internal encoder evaluation is assigned to the encoder interface 2 via p0188. Value 3 means: The internal encoder evaluation is assigned to the encoder interface 3 via p0189. <ul style="list-style-type: none"><li>- If necessary, the internal encoder evaluation must be assigned to an encoder interface via parameters p0187, p0188 or p0189 accordingly.</li><li>- If necessary, upgrade the firmware to a later version.</li></ul>
Reaction upon N:	NONE
Acknowl. upon N:	NONE

---

<b>F01015</b>	<b>Internal software error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	An internal software error has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
<b>A01016 (F)</b>	<b>Firmware changed</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	At least one firmware file in the directory was illegally changed on the non-volatile memory (memory card/device memory) with respect to the version when shipped from the factory. Alarm value (r2124, interpret decimal): 0: Checksum of one file is incorrect. 1: File missing. 2: Too many files. 3: Incorrect firmware version. 4: Incorrect checksum of the back-up file.
<b>Remedy:</b>	For the non-volatile memory for the firmware (memory card/device memory), restore the delivery condition. Note: The file involved can be read out using parameter r9925. The status of the firmware check is displayed using r9926. See also: r9925 (Firmware file incorrect), r9926 (Firmware check status)
Reaction upon F:	OFF2
Acknowl. upon F:	POWER ON
<b>A01017</b>	<b>Component lists changed</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	On the memory card, one file in the directory /SIEMENS/SINAMICS/DATA or /ADDON/SINAMICS/DATA has been illegally changed with respect to that supplied from the factory. No changes are permitted in this directory. Alarm value (r2124, interpret decimal): zyx dec: x = Problem, y = Directory, z = File name x = 1: File does not exist. x = 2: Firmware version of the file does not match the software version. x = 3: File checksum is incorrect. y = 0: Directory /SIEMENS/SINAMICS/DATA/ y = 1: Directory /ADDON/SINAMICS/DATA/ z = 0: File MOTARM.ACX z = 1: File MOTSRM.ACX z = 2: File MOTSLM.ACX z = 3: File ENCDATA.ACX z = 4: File FILTDATA.ACX z = 5: File BRKDATA.ACX z = 6: File DAT_BEAR.ACX z = 7: File CFG_BEAR.ACX z = 8: File ENC_GEAR.ACX
<b>Remedy:</b>	For the file on the memory card involved, restore the status originally supplied from the factory.

---

<b>A01020</b>	<b>Writing to RAM disk unsuccessful</b>
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A write access to the internal RAM disk was unsuccessful.
Remedy:	Adapt the file size for the system logbook to the internal RAM disk (p9930). See also: p9930 (System logbook activation)

---

<b>F01023</b>	<b>Software timeout (internal)</b>
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.

---

<b>F01030</b>	<b>Sign-of-life failure for master control</b>
Message value:	-
Drive object:	B_INF, ENC, VECTOR_G
Reaction:	Infeed: OFF1 (NONE, OFF2) Vector: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	For active PC master control, no sign-of-life was received within the monitoring time. The master control was returned to the active BICO interconnection.
Remedy:	Set the monitoring time higher at the PC or, if required, completely disable the monitoring function. For the commissioning software, the monitoring time is set as follows: <Drive> -> Commissioning -> Control panel -> Button "Fetch master control" -> A window is displayed to set the monitoring time in milliseconds. Notice: The monitoring time should be set as short as possible. A long monitoring time means a late response when the communication fails!

---

<b>F01031</b>	<b>Sign-of-life failure for OFF in REMOTE</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	Infeed: OFF1 (NONE, OFF2) Vector: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	With the "OFF in REMOTE" mode active, no sign-of-life was received within 3 seconds.
Remedy:	- Check the data cable connection at the serial interface for the Control Unit (CU) and operator panel. - Check the data cable between the Control Unit and operator panel.

---

<b>A01032 (F)</b>	<b>ACX: all parameters must be saved</b>
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The parameters of an individual drive object were saved (p0971 = 1), although there is still no backup of all drive system parameters. The saved object-specific parameters are not loaded the next time that the system powers up. For the system to successfully power up, all of the parameters must have been completely backed up.

Alarm value (r2124, interpret decimal):  
Only for internal Siemens troubleshooting.  
See also: p0971 (Save drive object parameters)

**Remedy:** Save all parameters (p0977 = 1 or "copy RAM to ROM").  
See also: p0977 (Save all parameters)

Reaction upon F: Infeed: NONE (OFF1, OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

---

**F01033 Units changeover: Reference parameter value invalid**

**Message value:** Parameter: %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** When changing over the units to the referred representation type, it is not permissible for any of the required reference parameters to be equal to 0.0  
Fault value (r0949, parameter):  
Reference parameter whose value is 0.0.  
See also: p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Technological unit selection)

**Remedy:** Set the value of the reference parameter to a number different than 0.0.  
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

---

**F01034 Units changeover: Calculation parameter values after reference value change unsuccessful**

**Message value:** Parameter: %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The change of a reference parameter meant that for an involved parameter the selected value was not able to be re-calculated in the per unit representation. The change was rejected and the original parameter value restored.  
Fault value (r0949, parameter):  
Parameter whose value was not able to be re-calculated.  
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

**Remedy:** Select the value of the reference parameter such that the parameter involved can be calculated in the per unit representation.  
See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

---

**A01035 (F) ACX: Parameter back-up file corrupted**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When the Control Unit is booted, no complete data set was found from the parameter back-up files. The last time that the parameterization was saved, it was not completely carried out.  
It is possible that the backup was interrupted by switching off or withdrawing the memory card.  
Alarm value (r2124, interpret hexadecimal):  
ddccbbaa hex:  
aa = 01 hex:  
Power up was realized without data backup. The drive is in the factory setting.  
aa = 02 hex:  
The last available backup data record was loaded. The parameterization must be checked. It is recommended that the parameterization is downloaded again.  
dd, cc, bb:  
Only for internal Siemens troubleshooting.  
See also: p0971 (Save drive object parameters), p0977 (Save all parameters)

**Remedy:** - Download the project again with the commissioning software.  
- save all parameters (p0977 = 1 or "copy RAM to ROM").  
See also: p0977 (Save all parameters)

Reaction upon F: Infeed: NONE (OFF1, OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)  
Acknowl. upon F: IMMEDIATELY

---

**F01036 (A) ACX: Parameter back-up file missing**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** Infeed: NONE (OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** When downloading the device parameterization, a parameter back-up file PSxxxxyy.ACX associated with a drive object cannot be found.  
Fault value (r0949, interpret hexadecimal):  
Byte 1: yyy in the file name PSxxxxyy.ACX  
yyy = 000 --> consistency back-up file  
yyy = 001 ... 062 --> drive object number  
yyy = 099 --> PROFIBUS parameter back-up file  
Byte 2, 3, 4:  
Only for internal Siemens troubleshooting.  
**Remedy:** If you have saved the project data using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory.  
If you have not saved the project data, then first commissioning of the system has to be carried out again.  
Reaction upon A: NONE  
Acknowl. upon A: NONE

---

**F01038 (A) ACX: Loading the parameter back-up file unsuccessful**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** Infeed: NONE (OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** An error has occurred when downloading PSxxxxyy.ACX or PTxxxxyy.ACX files from the non-volatile memory.  
Fault value (r0949, interpret hexadecimal):  
Byte 1: yyy in the file name PSxxxxyy.ACX  
yyy = 000 --> consistency back-up file  
yyy = 001 ... 062 --> drive object number  
yyy = 099 --> PROFIBUS parameter back-up file  
Byte 2:  
255: Incorrect drive object type.  
254: Topology comparison unsuccessful -> drive object type was not able to be identified.  
Reasons could be:  
- Incorrect component type in the actual topology  
- Component does not exist in the actual topology.  
- Component not active.  
Additional values:  
Only for internal Siemens troubleshooting.  
Byte 4, 3:  
Only for internal Siemens troubleshooting.  
**Remedy:** - If you have saved the project data using the commissioning software, download the project again. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory.  
- replace the memory card or Control Unit.  
Re byte 2 = 255:  
- Correct the drive object type (see p0107).  
Reaction upon A: NONE  
Acknowl. upon A: NONE

<b>F01039 (A)</b>	<b>ACX: Writing to the parameter back-up file was unsuccessful</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	Infeed: NONE (OFF2) Vector: NONE (OFF1, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	Writing to at least one parameter back-up file PSxxxxxyy.*** in the non-volatile memory was unsuccessful. - In the directory /USER/SINAMICS/DATA/ at least one parameter back-up file PSxxxxxyy.*** has the "read only" file attribute and cannot be overwritten. - There is not sufficient free memory space available. - The non-volatile memory is defective and cannot be written to. Fault value (r0949, interpret hexadecimal): dcba hex a = yyy in the file names PSxxxxxyy.*** a = 000 --> consistency back-up file a = 001 ... 062 --> drive object number a = 070 --> FEPROM.BIN a = 080 --> DEL4BOOT.TXT a = 099 --> PROFIBUS parameter back-up file b = xxx in the file names PSxxxxxyy.*** b = 000 --> data save started with p0977 = 1 or p0971 = 1 b = 010 --> data save started with p0977 = 10 b = 011 --> data save started with p0977 = 11 b = 012 --> data save started with p0977 = 12 d, c: Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- check the file attribute of the files (PSxxxxxyy.***, CAxxxxxyy.***, CCxxxxxyy.***) and, if required, change from "read only" to "writeable". - check the free memory space in the non-volatile memory. Approx. 80 kbyte of free memory space is required for every drive object in the system. - replace the memory card or Control Unit.
Reaction upon A:	NONE
Acknowled. upon A:	NONE
<b>F01040</b>	<b>Save parameter settings and carry out a POWER ON</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	A parameter was changed in the drive system which means that it is necessary to save the parameters and re-boot.
<b>Remedy:</b>	- save the parameters (p0971/p0977). - carry out a POWER ON (power off/on) for all components. Then: - upload the drive unit (commissioning software).
<b>F01040</b>	<b>Save parameter settings and carry out a POWER ON</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	A parameter was changed in the drive system which means that it is necessary to save the parameters and re-boot. Examples: - p1810.2 (wobulation of the pulse frequency) and p1802 (edge modulation) - p1750.5 (cl.-loop control mode PESM up to f=0Hz with HF signal injection)

**Remedy:**

- save the parameters (p0971/p0977).
- carry out a POWER ON for all components (switch-on the Control Unit with or after the power units).

When changing p1750.5 or p1810.2 for edge modulation, a warm restart is sufficient (p0009 = 30, p0976 = 3).

Then:

- upload the drive unit (commissioning software).

---

**F01041      Parameter save necessary**

**Message value:**    %1  
**Drive object:**    All objects  
**Reaction:**        NONE  
**Acknowledge:**    IMMEDIATELY  
**Cause:**           Defective or missing files were detected on the memory card when booting.  
                      Fault value (r0949, interpret decimal):  
                      1: Source file cannot be opened.  
                      2: Source file cannot be read.  
                      3: Target directory cannot be set up.  
                      4: Target file cannot be set up/opened.  
                      5: Target file cannot be written to.  
                      Additional values:  
                      Only for internal Siemens troubleshooting.

**Remedy:**

- save the parameters.
- download the project again to the drive unit.
- update the firmware
- if required, replace the Control Unit and/or memory card card.

---

**F01042      Parameter error during project download**

**Message value:**    Parameter: %1, Index: %2, fault cause: %3  
**Drive object:**    All objects  
**Reaction:**        Infeed: OFF2 (NONE, OFF1)  
                      Vector: OFF2 (NONE, OFF1, OFF3)  
**Acknowledge:**    IMMEDIATELY  
**Cause:**           An error was detected when downloading a project using the commissioning software (e.g. incorrect parameter value).  
                      For the specified parameter, it was detected that dynamic limits were exceeded that may possibly depend on other parameters.  
                      Fault value (r0949, interpret hexadecimal):  
                      ccbbaaaa hex  
                      aaaa = Parameter  
                      bb = Index  
                      cc = fault cause  
                      0: Parameter number illegal.  
                      1: Parameter value cannot be changed.  
                      2: Lower or upper value limit exceeded.

                      7: Descriptive element cannot be changed.  
                      9: Descriptive data not available.  
                      11: No master control.  
                      15: No text array available.  
                      17: Task cannot be executed due to operating state.  
                      20: Illegal value.  
                      21: Response too long.  
                      22: Parameter address illegal.  
                      23: Format illegal.  
                      24: Number of values not consistent.  
                      25: Drive object does not exist.  
                      101: Presently de-activated.  
                      104: Illegal value.  
                      107: Write access not permitted when controller enabled.

- 108: Unit unknown.
- 109: Write access only in the commissioning state, encoder (p0010 = 4).
- 110: Write access only in the commissioning state, motor (p0010 = 3).
- 111: Write access only in the commissioning state, power unit (p0010 = 2).
- 112: Write access only in the quick commissioning mode (p0010 = 1).
- 113: Write access only in the ready mode (p0010 = 0).
- 114: Write access only in the commissioning state, parameter reset (p0010 = 30).
- 115: Write access only in the Safety Integrated commissioning state (p0010 = 95).
- 116: Write access only in the commissioning state, technological application/units (p0010 = 5).
- 117: Write access only in the commissioning state (p0010 not equal to 0).
- 118: Write access only in the commissioning state, download (p0010 = 29).
- 119: Parameter may not be written in download.
- 120: Write access only in the commissioning state, drive basic configuration (device: p0009 = 3).
- 121: Write access only in the commissioning state, define drive type (device: p0009 = 2).
- 122: Write access only in the commissioning state, data set basic configuration (device: p0009 = 4).
- 123: Write access only in the commissioning state, device configuration (device: p0009 = 1).
- 124: Write access only in the commissioning state, device download (device: p0009 = 29).
- 125: Write access only in the commissioning state, device parameter reset (device: p0009 = 30).
- 126: Write access only in the commissioning state, device ready (device: p0009 = 0).
- 127: Write access only in the commissioning state, device (device: p0009 not equal to 0).
- 129: Parameter may not be written in download.
- 130: Transfer of the master control is inhibited via binector input p0806.
- 131: Required BICO interconnection not possible because BICO output does not supply floating value
- 132: Free BICO interconnection inhibited via p0922.
- 133: Access method not defined.
- 200: Below the valid values.
- 201: Above the valid values.
- 202: Cannot be accessed from the Basic Operator Panel (BOP).
- 203: Cannot be read from the Basic Operator Panel (BOP).
- 204: Write access not permitted.

**Remedy:**

- enter the correct value in the specified parameter.
- identify the parameter that restricts the limits of the specified parameter.

---

## **F01043 Fatal error at project download**

**Message value:** Fault cause: %1

**Drive object:** All objects

**Reaction:** Infeed: OFF2 (OFF1)  
Vector: OFF2 (OFF1, OFF3)

**Acknowledge:** IMMEDIATELY

**Cause:** A fatal error was detected when downloading a project using the commissioning software.

Fault value (r0949, interpret decimal):

1: Device status cannot be changed to Device Download (drive object ON?).

2: Incorrect drive object number.

3: A drive object that has already been deleted is deleted again.

4: Deleting of a drive object that has already been registered for generation.

5: Deleting a drive object that does not exist.

6: Generating an undeleted drive object that already existed.

7: Regenerating a drive object already registered for generation.

8: Maximum number of drive objects that can be generated exceeded.

9: Error while generating a device drive object.

10: Error while generating target topology parameters (p9902 and p9903).

11: Error while generating a drive object (global component).

12: Error while generating a drive object (drive component).

13: Unknown drive object type.

14: Drive status cannot be changed to "ready for operation" (p0947 and p0949).

15: Drive status cannot be changed to drive download.

16: Device status cannot be changed to "ready for operation".

17: It is not possible to download the topology. The component wiring should be checked, taking into account the various messages/signals.

18: A new download is only possible if the factory settings are restored for the drive unit.

19: The slot for the option module has been configured several times (e.g. CAN and COMM BOARD)

20: The configuration is inconsistent (e.g. CAN for Control Unit, however no CAN configured for drive objects A\_INF, SERVO or VECTOR ).  
 21: Error when accepting the download parameters.  
 22: Software-internal download error.  
 Additional values: only for internal Siemens troubleshooting.

**Remedy:**

- use the current version of the commissioning software.
- modify the offline project and carry out a new download (e.g. compare the number of drive objects, motor, encoder, power unit in the offline project and at the drive).
- change the drive state (is a drive rotating or is there a message/signal?).
- carefully note any other messages/signals and remove their cause.
- boot from previously saved files (power-down/power-up or p0976).

---

**F01044 CU: Descriptive data error**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** POWER ON  
**Cause:** An error was detected when loading the descriptive data saved in the non-volatile memory.  
**Remedy:** Replace the memory card or Control Unit.

---

**A01045 CU: Configuring data invalid**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** An error was detected when evaluating the parameter files PSxxxxxyy.ACX, PTxxxxxyy.ACX, CAxxxxxyy.ACX, or CCxxxxxyy.ACX saved in the non-volatile memory. Because of this, under certain circumstances, several of the saved parameter values were not able to be accepted. Also see r9406 up to r9408.  
 Alarm value (r2124, interpret hexadecimal):  
 Only for internal Siemens troubleshooting.  
**Remedy:**

- Check the parameters displayed in r9406 up to r9408, and correct these if required.
- Restore the factory setting using (p0976 = 1) and re-load the project into the drive unit.

Then save the parameterization in STARTER using the "Copy RAM to ROM" function or with p0977 = 1. This overwrites the incorrect parameter files in the non-volatile memory – and the alarm is withdrawn.

---

**A01049 CU: It is not possible to write to file**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** It is not possible to write into a write-protected file (PSxxxxxx.acx). The write request was interrupted.  
 Alarm value (r2124, interpret decimal):  
 Drive object number.  
**Remedy:** Check whether the "write protected" attribute has been set for the files in the non-volatile memory under .../USER/SINAMICS/DATA/...  
 When required, remove write protection and save again (e.g. set p0977 to 1).

---

**F01050 Memory card and device incompatible**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
 Vector: OFF2 (NONE, OFF1, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The memory card and the device type do not match (e.g. a memory card for SINAMICS S is inserted in SINAMICS G).  
**Remedy:**

- insert the matching memory card.
- use the matching Control Unit or power unit.

<b>F01054</b>	<b>CU: System limit exceeded</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	At least one system overload has been identified. Fault value (r0949, interpret decimal): 1: Computing time load too high (r9976[1]). 5: Peak load too high (r9976[5]). See also: r9976 (System utilization)
<b>Remedy:</b>	Re fault value = 1, 5: - reduce the computing time load of the drive unit (r9976[1] and r9976[5]) to under 100 %. - check the sampling times and adjust if necessary (p0115, p0799, p4099). - de-activate function modules. - de-activate drive objects. - remove drive objects from the target topology. - note the DRIVE-CLiQ topology rules and if required, change the DRIVE-CLiQ topology. When using the Drive Control Chart (DCC) or free function blocks (FBLOCKS), the following applies - the computing time load of the individual run-time groups on a drive object can be read out in r21005 (DCC) or r20005 (FBLOCKS). - if necessary, the assignment of the run-time group (p21000, p20000) can be changed in order to increase the sampling time (r21001, r20001). - if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS).
<b>F01055</b>	<b>CU: Internal error (SYNO of port and application not identical)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM150, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	All applications that operate with slaves at one port must be derived from the same SYNO clock cycle. The first application whose registration (log-on) connects a slave to a port defines the SYNO clock cycle that will be used as basis for the port. Fault value (r0949, interpret hexadecimal): Method ID. Note: Only for internal Siemens troubleshooting.
<b>Remedy:</b>	Contact the Hotline.
<b>F01056</b>	<b>CU: Internal error (clock cycle of parameter group already assigned differently)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM150, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The requested parameter group (IREG, NREG, ...) is already being used in a different clock cycle. Fault value (r0949, interpret hexadecimal): Method ID. Note: Only for internal Siemens troubleshooting.
<b>Remedy:</b>	Contact the Hotline.
<b>F01057</b>	<b>CU: Internal error (different DRIVE-CLiQ type for the slave)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM150, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The requested DRIVE-CLiQ type (hps_ps, hps_enc, ...) has been specified differently for the same slave component. Fault value (r0949, interpret hexadecimal): Method ID.

Note:  
Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.

---

**F01058 CU: Internal error (slave missing in topology)**

**Message value:** %1  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested slave component does not exist in the topology.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.

---

**F01059 CU: Internal error (port does not exist)**

**Message value:** %1  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The port object assigned according to the topology of the requested slave component does not exist.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.

---

**F01060 CU: Internal error (parameter group not available)**

**Message value:** %1  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested parameter group (IREG, NREG, ...) is not offered by this slave type.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.

---

**F01061 CU: Internal error (application not known)**

**Message value:** %1  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** An application that is not registered with TSM has attempted to register with registerSlaves().  
The cause can be an unsuccessful TSM registration or an incorrect registration sequence. It is always necessary to log in to the TSM before registerSlaves() can be used.  
Fault value (r0949, interpret hexadecimal):  
Method ID.  
Note:  
Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.

<b>F01063</b>	<b>CU: Internal error (PDM)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM150, VECTOR_G
<b>Reaction:</b>	NONE

<b>Cause:</b>	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Method ID. Note: Only for internal Siemens troubleshooting.
<b>Remedy:</b>	Contact the Hotline.
<b>A01064 (F)</b>	<b>CU: Internal error (CRC)</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	CRC error in the Control Unit program memory
<b>Remedy:</b>	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2, OFF3, STOP2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
<b>F01068</b>	<b>CU: Data memory, memory overflow</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The utilization for a data memory area is too large. Fault value (r0949, interpret binary): Bit 0 = 1: High-speed data memory 1 overloaded Bit 1 = 1: High-speed data memory 2 overloaded Bit 2 = 1: High-speed data memory 3 overloaded Bit 3 = 1: High-speed data memory 4 overloaded
<b>Remedy:</b>	- de-activate the function module. - de-activate drive object. - remove the drive object from the target topology.
<b>A01069</b>	<b>Parameter backup and device incompatible</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The parameter backup on the memory card and the drive unit do not match. The module boots with the factory settings. Example: Devices A and B. are not compatible and a memory card with the parameter backup for device A is inserted in device B.
<b>Remedy:</b>	- insert a memory card with compatible parameter backup and carry out a POWER ON. - insert a memory card without parameter backup and carry out a POWER ON. - save the parameters (p0977 = 1).

---

<b>F01070</b>	<b>Project/firmware is being downloaded to the memory card</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An upgrade (project/firmware download) was initiated on the memory card. While this fault is present, the corresponding update takes place with plausibility and consistency checks. After this, depending on the command option, a new boot (reset) for the Control Unit is initiated. Caution: During the upgrade and while this fault is present, it is not permissible to switch off the Control Unit. If the operation is interrupted, this can destroy the file system on the memory card. The memory card will then no longer work properly and must be repaired.
<b>Remedy:</b>	Not necessary. The fault automatically disappears after the upgrade has been completed.

---

<b>A01099</b>	<b>Tolerance window of time synchronization exited</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The time master exited the selected tolerance window for time synchronization. See also: p3109 (RTC real time synchronization, tolerance window)
<b>Remedy:</b>	Select the re-synchronization interval so that the synchronization deviation between the time master and drive system lies within the tolerance window. See also: r3108 (RTC last synchronization deviation)

---

<b>A01100</b>	<b>CU: Memory card withdrawn</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The memory card (non-volatile memory) was withdrawn during operation. Notice: It is not permissible for the memory card to be withdrawn or inserted under voltage.
<b>Remedy:</b>	- power down the drive system. - re-insert the memory card that was withdrawn - this card must match the drive system. - power up the drive system again.

---

<b>F01105 (A)</b>	<b>CU: Insufficient memory</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF1
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	Too many functions have been configured on this Control Unit (e.g. too many drives, function modules, data sets, OA applications, blocks, etc). Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- change the configuration on this Control Unit (e.g. fewer drives, function modules, data sets, OA applications, blocks, etc). - use an additional Control Unit.
Reaction upon A:	NONE
Acknowled. upon A:	NONE

<b>F01106</b>	<b>CU: Insufficient memory</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM150, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	There is not sufficient free memory space available.
<b>Remedy:</b>	Not necessary.
<b>F01107</b>	<b>CU: Data save in the non-volatile memory unsuccessful</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A data save in the non-volatile memory was not able to be successfully carried out. - non-volatile memory is defective. - insufficient space in the non-volatile memory. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- try to save again. - replace the memory card or Control Unit.

**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When changing a sampling time (p0115[0], p0799 or p4099), inconsistency between the clock cycles has been identified.  
Alarm value (r2124, interpret decimal):  
1: Value lower than minimum value.  
2: Value higher than maximum value.  
3: Value not a multiple of 1.25 µs.  
4: Value does not match clock-cycle synchronous PROFIBUS operation.  
5: Value not a multiple of 125 µs.  
6: Value not a multiple of 250 µs.  
7: Value not a multiple of 375 µs.  
8: Value not a multiple of 400 µs.  
10: Special restriction of the drive object violated.  
20: On a SERVO with a sampling time of 62.5 µs, more than two drive objects or one drive object of a type other than SERVO have been detected on the same DRIVE-CLiQ line (a maximum of two SERVO type drive objects are permitted).  
21: Value can be a multiple of the current controller sampling time of a servo or vector drive in the system (e.g. for TB30, the values of all of the indices should be taken into account).  
30: Value less than 31.25 µs.  
31: Value less than 62.5 µs (31.25 µs is not supported for SMC10, SMC30, SMI10 and Double Motor Modules).  
32: Value less than 125 µs.  
33: Value less than 250 µs.  
40: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs. Further, none of the nodes has a sampling time of less than 125 µs.  
41: A chassis unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 250 µs.  
42: An Active Line Module was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 125 µs.  
43: A Voltage Sensing Module (VSM) was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is not equal to the current controller sampling time of the drive object of the VSM.  
44: The highest common denominator of the sampling times of all of the components connected to the DRIVE-CLiQ line is not the same for all components of this drive object (e.g. there are components on different DRIVE-CLiQ lines on which different highest common denominators are generated).  
45: A chassis parallel unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 162.5 µs or 187.5 µs (for a 2 or 3x parallel connection).  
46: A node has been identified on the DRIVE-CLiQ line whose sampling time is not a multiple of the lowest sampling time on this line.  
52: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 31.25 µs.

54: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 62.5 µs.  
 56: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs.  
 58: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 250 µs.  
 99: Inconsistency of cross drive objects detected.  
 116: Recommended clock cycle in r0116[0...1].  
 General note:  
 The topology rules should be noted when connecting up DRIVE-CLiQ (refer to the appropriate product documentation).  
 The parameters of the sampling times can also be changed with automatic calculations.  
 Example for highest common denominator: 125 µs, 125 µs, 62.5 µs --> 62.5 µs

**Remedy:**  
 - check the DRIVE-CLiQ cables.  
 - set a valid sampling time.

**A01224 CU: Pulse frequency inconsistent**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When changing the minimum pulse frequency (p0113) inconsistency between the pulse frequencies was identified.  
 Alarm value (r2124, interpret decimal):  
 1: Value lower than minimum value.  
 2: Value higher than maximum value.  
 3: Resulting sampling time is not a multiple of 1.25 µs.  
 4: Value does not match clock-cycle synchronous PROFIBUS operation.  
 10: Special restriction of the drive object violated.  
 99: Inconsistency of cross drive objects detected.  
 116: Recommended clock cycle in r0116[0...1].  
**Remedy:** Set a valid pulse frequency.  
 See also: p0113 (Minimum pulse frequency, selection)

**F01250 CU: CU-EEPROM incorrect read-only data**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE (OFF2)  
**Acknowledge:** POWER ON  
**Cause:** Error when reading the read-only data of the EEPROM in the Control Unit.  
 Fault value (r0949, interpret decimal):  
 Only for internal Siemens troubleshooting.  
**Remedy:**  
 - carry out a POWER ON.  
 - replace the Control Unit.

---

**A01251 CU: CU-EEPROM incorrect read-write data**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Error when reading the read-write data of the EEPROM in the Control Unit.  
 Alarm value (r2124, interpret decimal):  
 Only for internal Siemens troubleshooting.  
**Remedy:** For alarm value r2124 < 256, the following applies:  
 - carry out a POWER ON.  
 - replace the Control Unit.  
 For alarm value r2124 >= 256, the following applies:  
 - for the drive object with this alarm, clear the fault memory (p0952 = 0).

- as an alternative, clear the fault memory of all drive objects (p2147 = 1).
- replace the Control Unit.

<b>F01303</b>	<b>DRIVE-CLiQ component does not support the required function</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A function requested by the Control Unit is not supported by a DRIVE-CLiQ component. Fault value (r0949, interpret decimal): 1: The component does not support the de-activation. 101: The Motor Module does not support an internal armature short-circuit. 102: The Motor Module does not support the de-activation. 201: The Sensor Module does not support actual value inversion (p0410.0 = 1) when using a Hall sensor (p0404.6 = 1) for the commutation. 202: The Sensor Module does not support parking/unparking. 203: The Sensor Module does not support the de-activation. 204: The firmware of this Terminal Module 15 (TM15) does not support the application TM15DI/DO. 205: The Sensor Module does not support the selected temperature evaluation (r0458). 206: The firmware of this Terminal Modules TM41/TM31/TM15 refers to an old firmware version. It is urgently necessary to upgrade the firmware to ensure disturbance-free operation. 207: The power unit with this hardware version does not support operation with device supply voltages of less than 380 V. 208: The Sensor Module does not support de-selection of commutation with zero mark (via p0430.23). 211: The Sensor Module does not support single-track encoders (r0459.10). 212: The Sensor Module does not support LVDT sensors (p4677.0). 213: The Sensor Module does not support the characteristic type (p4662).
<b>Remedy:</b>	Upgrade the firmware of the DRIVE-CLiQ component involved. For fault value = 205: Check parameter p0600 and p0601 and if required, adapt interpretation. For fault value = 207: Replace the power unit or if required set the device supply voltage higher (p0210). For fault value = 208: Check parameter p0430.23 and reset if necessary.

<b>A01304 (F)</b>	<b>Firmware version of DRIVE-CLiQ component is not up-to-date</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The non-volatile memory has a more recent firmware version than the one in the connected DRIVE-CLiQ component. Alarm value (r2124, interpret decimal): Component number of the DRIVE-CLiQ component involved.
<b>Remedy:</b>	Update the firmware (p7828, p7829 and commissioning software).
Reaction upon F:	NONE
Acknowled. upon F:	IMMEDIATELY
<b>F01305</b>	<b>Topology: Component number missing</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The component number from the topology was not parameterized (p0121 (for power unit, refer to p0107), p0131 (for servo/vector drives, refer to p0107), p0141, p0151, p0161). Fault value (r0949, interpret decimal): Data set number. Note: The fault also occurs if speed encoders have been configured (p0187 to p0189) but no component numbers exist for them. In this case, the fault value includes the drive data set number plus 100 * encoder number (e.g. 3xx, if a component number was not entered in p0141 for the third encoder (p0189)). See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189
<b>Remedy:</b>	Enter the missing component number or remove the component and restart commissioning. See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189
<b>A01306</b>	<b>Firmware of the DRIVE-CLiQ component being updated</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	Firmware update is active for at least one DRIVE-CLiQ component. Alarm value (r2124, interpret decimal): Component number of the DRIVE-CLiQ component.
<b>Remedy:</b>	Not necessary. This alarm automatically disappears after the firmware has been updated.
<b>A01314</b>	<b>Topology: Component must not be present</b>
<b>Message value:</b>	Component number: %1, Component class: %2, Connection number: %3
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	For a component, "de-activate and not present" is set but this component is still in the topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: aa = component number bb = component class of the component cc = connection number Note: Component class and connection number are described in F01375.

**Remedy:**

- remove the corresponding component.
- change the setting "de-activate and not present".

**Note:**  
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

**A01315      Drive object not ready for operation**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** For the active drive object involved, at least one activated component is missing.  
**Note:**  
All other active and operational drive objects can be in the "RUN" state.

**Remedy:** The alarm automatically disappears again with the following actions:  
- de-activate the drive object involved (p0105 = 0).  
- de-activate the components involved (p0125 = 0, p0145 = 0, p0155 = 0, p0165 = 0).  
- re-insert the components involved.  
See also: p0105, p0125, p0145, p0155

---

**A01316      Drive object inactive and again ready for operation**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** If, when inserting a component of the target topology, an inactive, non-operational drive object becomes operational again. The associated parameter of the component is, in this case, set to "activate" (p0125, p0145, p0155, p0165).  
**Note:**  
This is the only message that is displayed for a de-activated drive object.

**Remedy:** The alarm automatically disappears again with the following actions:  
- activate the drive object involved (p0105 = 1).  
- again withdraw the components involved.  
See also: p0105 (Activate/de-activate drive object)

---

**A01317 (N)      De-activated component again present**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** If a component of the target topology for an active drive object is inserted and the associated parameter of the component is set to "de-activate" (p0125, p0145, p0155, p0165).  
**Note:**  
This is the only message that is displayed for a de-activated component.

**Remedy:** The alarm automatically disappears again with the following actions:  
- activate the components involved (p0125 = 1, p0145 = 1, p0155 = 1, p0165 = 1).  
- again withdraw the components involved.

<b>A01331</b>	<b>Topology: At least one component not assigned to a drive object</b>
<b>Message value:</b>	Component number: %1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	<p>At least one component is not assigned to a drive object.</p> <ul style="list-style-type: none"><li>- when commissioning, a component was not able to be automatically assigned to a drive object.</li><li>- the parameters for the data sets are not correctly set.</li></ul> <p>Alarm value (r2124, interpret decimal): Component number of the unassigned component.</p>
<b>Remedy:</b>	<p>This component is assigned to a drive object. Check the parameters for the data sets.</p> <p>Examples:</p> <ul style="list-style-type: none"><li>- power unit (p0121).</li><li>- motor (p0131, p0186).</li><li>- encoder interface (p0140, p0141, p0187 ... p0189).</li><li>- encoder (p0140, p0142, p0187 ... p0189).</li><li>- Terminal Module (p0151).</li><li>- option board (p0161).</li></ul>
<b>F01340</b>	<b>Topology: Too many components on one line</b>
<b>Message value:</b>	Component number or connection number: %1, fault cause: %2
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>For the selected communications clock cycle, too many DRIVE-CLiQ components are connected to one line of the Control Unit.</p> <p>Fault value (r0949, interpret hexadecimal): xyy hex: x = fault cause, yy = component number or connection number.</p> <p>1yy: The communications clock cycle of the DRIVE-CLiQ connection on the Control Unit is not sufficient for all read transfers.</p> <p>2yy: The communications clock cycle of the DRIVE-CLiQ connection on the Control Unit is not sufficient for all write transfers.</p> <p>3yy: Cyclic communication is fully utilized.</p> <p>4yy: The DRIVE-CLiQ cycle starts before the earliest end of the application. An additional dead time must be added to the control. Sign-of-life errors can be expected. The conditions of operation with a current controller sampling time of 31.25 µs have not been maintained.</p> <p>5yy: Internal buffer overflow for net data of a DRIVE-CLiQ connection.</p> <p>6yy: Internal buffer overflow for receive data of a DRIVE-CLiQ connection.</p> <p>7yy: Internal buffer overflow for send data of a DRIVE-CLiQ connection.</p> <p>8yy: The component clock cycles cannot be combined with one another</p> <p>900: The lowest common multiple of the clock cycles in the system is too high to be determined.</p> <p>901: The lowest common multiple of the clock cycles in the system cannot be generated with the hardware.</p>

**Remedy:**

- check the DRIVE-CLiQ connection.
- Reduce the number of components on the DRIVE-CLiQ line involved and distribute these to other DRIVE-CLiQ sockets of the Control Unit. This means that communication is uniformly distributed over several lines.  
Re fault value = 1yy - 4yy in addition:
- increase the sampling times (p0112, p0115, p4099). If necessary, for DCC or FBLOCKS, change the assignment of the run-time group (p21000, p20000) so that the sampling time (r21001, r20001) is increased.
- if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS).
- reduce the function modules (r0108).
- establish the conditions for operation with a current controller sampling time of 31.25 µs (at the DRIVE-CLiQ line, only operate Motor Modules and Sensor Modules with this sampling time and only use a permitted Sensor Module (e.g. SMC20, this means a 3 at the last position of the order number)).
- For an NX, the corresponding Sensor Module for a possibly existing second measuring system should be connected to a free DRIVE-CLiQ socket of the NX.  
Re fault value = 8yy in addition:
- check the clock cycles settings (p0112, p0115, p4099). Clock cycles on a DRIVE-CLiQ line must be perfect integer multiples of one another. As clock cycle on a line, all clock cycles of all drive objects in the previously mentioned parameters apply, which have components on the line involved.  
Re fault value = 9yy in addition:
- check the clock cycles settings (p0112, p0115, p4099). The lower the numerical value difference between two clock cycles, the higher the lowest common multiple. This behavior has a significantly stronger influence, the higher the numerical values of the clock cycles.

---

**F01341      Topology: Maximum number of DRIVE-CLiQ components exceeded**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** Too many DRIVE-CLiQ components were defined in the actual topology.  
Note:  
Pulse enable is withdrawn and prevented.

**Remedy:**

- check the DRIVE-CLiQ connection.
- reduce the number components on the DRIVE-CLiQ line involved in order to maintain the maximum quantity structure.

---

**F01354      Topology: Actual topology indicates an illegal component**

**Message value:** Fault cause: %1, component number: %2

**Drive object:** All objects

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** The actual topology indicates at least one illegal component.  
Fault value (r0949, interpret hexadecimal):  
yyxx hex: yy = component number, xx = cause.  
xx = 1: Component at this Control Unit not permissible.  
xx = 2: Component in combination with another component not permissible.  
Note:  
Pulse enable is prevented.

**Remedy:** Remove the illegal components and restart the system.

---

**F01355      Topology: Actual topology changed**

**Message value:** %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** The device target topology (p0099) does not correspond to the device actual topology (r0098).  
The fault only occurs if the topology was commissioned using the automatic internal device mechanism and not using the commissioning software.  
Fault value (r0949, interpret decimal):  
Only for internal Siemens troubleshooting.  
See also: r0098 (Actual device topology), p0099 (Device target topology)

**Remedy:** One of the following counter-measures can be selected if no faults have occurred in the topology detection itself:  
 If commissioning is still not completed:  
 - carry out a self-commissioning routine (starting from p0009 = 1).  
 In general:  
 Set p0099 = r0098, set p0009 = 0; for existing Motor Modules, this results in servo drives being automatically generated (p0107).  
 Generating servo drives: Set p0097 to 1, set p0009 to 0.  
 Generating vector drives: Set p0097 to 2, set p0009 to 0.  
 Generating vector drives with parallel circuit: Set p0097 to 12, set p0009 to 0.  
 In order to set configurations in p0108, before setting p0009 to 0, it is possible to first set p0009 to 2 and modify p0108. The index corresponds to the drive object (p0107).  
 If commissioning has already been completed:  
 - re-establish the original connections and re-connect power to the Control Unit.  
 - restore the factory setting for the complete equipment (all of the drives) and allow automatic self-commissioning again.  
 - change the device parameterization to match the connections (this is only possible using the commissioning software).  
**Notice:**  
 Topology changes that result in this fault being generated cannot be accepted by the automatic function in the device, but must be transferred using the commissioning software and parameter download. The automatic function in the device only allows constant topology to be used. Otherwise, when the topology is changed, all of the previous parameter settings are lost and replaced by the factory setting.  
 See also: r0098 (Actual device topology)

**F01356      Topology: There is a defective DRIVE-CLiQ component**

**Message value:** Fault cause: %1, Component number: %2, Connection number: %3  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The actual topology indicates at least one defective DRIVE-CLiQ component.  
 Fault value (r0949, interpret hexadecimal):  
 zzyyxx hex:  
 zz = connection number of the component at which the defective component is connected  
 yy = component number of the component at which the defective component is connected  
 xx = fault cause  
 xx = 1: Component at this Control Unit not permissible.  
 xx = 2: component with communication defect.  
**Note:**  
 Pulse enable is withdrawn and prevented.  
**Remedy:** Replace the defective component and restart the system.

---

**F01357      Topology: Two Control Units identified on the DRIVE-CLiQ line**

**Message value:** component number: %1, connection number: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** In the actual topology, 2 Control Units are connected with one another through DRIVE-CLiQ. This is not permitted.  
 Fault value (r0949, interpret hexadecimal):  
 yyxx hex:  
 yy = connection number of the Control Unit at which the second Control Unit is connected  
 xx = component number of the Control Unit at which the second Control Unit is connected  
**Note:**  
 Pulse enable is withdrawn and prevented.  
**Remedy:**  
 - remove the second Control Unit and restart the system.  
 - for the component DRIVE-CLiQ extension, interchange the hybrid cable (IN/OUT).

<b>A01358</b>	<b>Topology: Line termination not available</b>
<b>Message value:</b>	CU connection number: %1, component number: %2, connection number: %3
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	At least one line with distributed drives is not terminated. The last participant on the line must be terminated with a line termination connector. This therefore ensures the degree of protection of the distributed drives. Fault value (r0949, interpret hexadecimal): zzyyxx hex: zz = connection number of the distributed drive where there is no terminating connector yy = component number xx = CU connection number
<b>Remedy:</b>	Install the line terminating connector for the last distributed drive.
<b>F01360</b>	<b>Topology: Actual topology not permissible</b>
<b>Message value:</b>	Fault cause: %1, preliminary component number: %2
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The detected actual topology is not permissible. Fault value (r0949, interpret hexadecimal): ccccbbaa hex: cccc = preliminary component number, aa = fault cause aa = 01 hex = 1 dec: Too many components were detected at the Control Unit. A maximum of 199 components is permissible. aa = 02 hex = 2 dec: The component type of a component is not known. aa = 03 hex = 3 dec: It is illegal to combine ALM and BLM. aa = 04 hex = 4 dec: It is illegal to combine ALM and SLM. aa = 05 hex = 5 dec: It is illegal to combine BLM and SLM. aa = 06 hex = 6 dec: A CX32 was not directly connected to a permitted Control Unit. aa = 07 hex = 7 dec: An NX10 or NX15 was not directly connected to a permitted Control Unit. aa = 08 hex = 8 dec: A component was connected to a Control Unit that is not permitted for this purpose. aa = 09 hex = 9 dec: A component was connected to a Control Unit with out-of-date firmware. aa = 0A hex = 10 dec: Too many components of a particular type detected. aa = 0B hex = 11 dec: Too many components of a particular type detected on a single line. Note: The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
<b>Remedy:</b>	Re fault cause = 1: Change the configuration. Connect less than 199 components to the Control Unit. Re fault cause = 2: Remove the component with unknown component type. Re fault cause = 3, 4, 5: Establish a valid combination. Re fault cause = 6, 7: Connect the expansion module directly to a permitted Control Unit. Re fault cause = 8: Remove component or use a permissible component. Re fault cause = 9: Upgrade the firmware of the Control Unit to a later version.

Re fault cause = 10, 11:  
Reduce the number of components.

<b>A01361</b>	<b>Topology: Actual topology contains SINUMERIK and SIMOTION components</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE

Adapting the topologies:

- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.

- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.

- automatically remove the topology error (p9904).

Note:

Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

**A01416**

**Topology: Comparison additional component in actual topology**

**Message value:**

Component number: %1, Component class: %2, Connection number: %3

**Drive object:**

All objects

**Reaction:**

NONE

**Acknowledge:**

NONE

**Cause:**

The topology comparison has found a component in the actual topology which is not specified in the target topology. The alarm value includes the component number and connection number of the component with which the additional component is connected.

Alarm value (r2124, interpret hexadecimal):

ddccbbaa hex:

cc = connection number

bb = component class of the additional component

aa = component number

Note:

- component class and connection number are described in F01375.

- components that are connected to this additional component are not operational.

**Remedy:** Adapting the topologies:  
 - remove the additional component in the actual topology.  
 - download the target topology that matches the actual topology (commissioning software).  
**Note:**  
 Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

---

**A01420 Topology: Comparison a component is different**

**Message value:** Component number: %1, component class target: %2, component class actual: %3, fault cause: %4  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The topology comparison has detected differences in the actual and target topologies in relation to one component. There are differences in the electronic rating plate.  
 Alarm value (r2124, interpret hexadecimal):  
 ddcbbbaa hex: aa = component number of the component, bb = component class of the target topology, cc = component class of the actual topology, dd = fault cause  
 dd = 01 hex = 1 dec:  
 Different component type.  
 dd = 02 hex = 2 dec:  
 Different Order No.  
 dd = 03 hex = 3 dec:  
 Different manufacturer.  
 dd = 04 hex = 4 dec:  
 Connection changed over for a multi-component slave (e.g. Double Motor Module), defective EEPROM data in the electronic rating plate, or only part of a multi-component slave set to "de-activate and not present".  
 dd = 05 hex = 5 dec:  
 A CX32 was replaced by an NX10 or NX15.  
 dd = 06 hex = 6 dec:  
 An NX10 or NX15 was replaced by a CX32.  
**Note:**  
 Component class and component type are described in F01375.  
 The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

**Remedy:** Adapting the topologies:  
 - check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences.  
 - parameterize the topology comparison of all components (p9906).  
 - parameterize the topology comparison of one components (p9907, p9908).  
**Note:**  
 Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

---

**A01421 Topology: Comparison different components**

**Message value:** Component number: %1, component class target: %2, component class actual: %3, fault cause: %4  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The topology comparison has detected differences in the actual and target topologies in relation to one component. The component class, the component type or the number of connections differ.  
 Alarm value (r2124, interpret hexadecimal):  
 ddcbbbaa hex: aa = component number of the component, bb = component class of the target topology, cc = component class of the actual topology, dd = fault cause  
 dd = 01 hex = 1 dec:  
 Different component class.  
 dd = 02 hex = 2 dec:  
 Different component type.  
 dd = 03 hex = 3 dec:  
 Different Order No.  
 dd = 04 hex = 4 dec:  
 Different number of connections.

<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The standard telegram in p0922 is not maintained and therefore p0922 is set to 999. Fault value (r0949, interpret decimal): BICO parameter for which the write attempt was unsuccessful.
<b>Remedy:</b>	Again set the required standard telegram (p0922).
Reaction upon A:	NONE
Acknowl. upon A:	NONE

---

<b>A01507 (F, N)</b>	<b>BICO: Interconnections to inactive objects present</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	There are BICO interconnections to an inactive/inoperable drive object. The BI/CI parameters involved are listed in r9498. The associated BO/CO parameters are listed in r9499.

The list of the BICO interconnections to other drive objects is displayed in r9491 and r9492 of the de-activated drive object.

Note:

r9498 and r9499 are only written to, if p9495 is not set to 0.

Alarm value (r2124, interpret decimal):

Number of BICO interconnections found to inactive drive objects.

**Remedy:**

- set all open BICO interconnections centrally to the factory setting with p9495 = 2.
- make the non-operational drive object active/operational again (re-insert or activate components).

Reaction upon F: Infeed: OFF2 (NONE, OFF1)

Vector: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowl. upon F: IMMEDIATELY

Reaction upon N: NONE

Acknowl. upon N: NONE

---

**A01508 BICO: Interconnections to inactive objects exceeded**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The maximum number of BICO interconnections (signal sinks) when de-activating a drive object was exceeded. When de-activating a drive object, all BICO interconnections (signal sinks) are listed in the following parameters:

- r9498[0...29]: List of the BI/CI parameters involved.
- r9499[0...29]: List of the associated BO/CO parameters.

**Remedy:** The alarm automatically disappears as soon as no BICO interconnection (value = 0) is entered in r9498[29] and r9499[29].

Notice:

When re-activating the drive object, all BICO interconnections should be checked and if required, re-established.

---

**F01510 BICO: Signal source is not float type**

**Message value:** Parameter: %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** The requested connector output does not have the correct data type. This interconnection is not established. Fault value (r0949, interpret decimal):

Parameter number to which an interconnection should be made (connector output).

**Remedy:** Interconnect this connector input with a connector output having a float data type.

---

**F01511 (A) BICO: Interconnection with different scalings**

**Message value:** Parameter: %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values.

- the BICO output has different normalized units than the BICO input.
- message only for interconnections within a drive object.

Example:

The BICO output has, as normalized unit, voltage and the BICO input has current.

This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input.

p2002: contains the reference value for current

p2001: contains the reference value for voltage

Fault value (r0949, interpret decimal):

Parameter number of the BICO input (signal sink).

**Remedy:** Not necessary.

Reaction upon A: NONE

Acknowl. upon A: NONE

---

**F01512      BICO: No scaling available**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** Infeed: OFF2 (OFF1)  
Vector: OFF2  
**Acknowledge:** POWER ON  
**Cause:** An attempt was made to determine a conversion factor for a scaling that does not exist.  
Fault value (r0949, interpret decimal):  
Unit (e.g. corresponding to SPEED) for which an attempt was made to determine a factor.  
**Remedy:** Apply scaling or check the transfer value.

---

**F01513 (A)      BICO: Interconnection cross DO with different scalings**

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values.  
An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different.  
Example 1:  
BICO output with voltage normalized unit, BICO input with current normalized unit, BICO output and BICO input lie in different drive objects. This means that the factor  $p2002/p2001$  is calculated between the BICO output and the BICO input.  
p2002: contains the reference value for current  
p2001: contains the reference value for voltage  
Example 2:  
BICO output with voltage normalized unit in drive object 1 (DO1), BICO input with voltage normalized unit in drive object 2 (DO2). The reference values for voltage (p2001) of the two drive objects have different values. This means that the factor  $p2001(DO1)/p2001(DO2)$  is calculated between the BICO output and the BICO input.  
p2001: contains the reference value for voltage, drive objects 1, 2  
Fault value (r0949, interpret decimal):  
Parameter number of the BICO input (signal sink).  
**Remedy:** Not necessary.  
Reaction upon A: NONE  
Acknowl. upon A: NONE

---

**A01514 (F)      BICO: Error when writing during a reconnect**

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** During a reconnect operation (e.g. while booting or downloading - but can also occur in normal operation) a parameter was not able to be written to.  
Example:  
When writing to BICO input with double word format (DWORD), in the second index, the memory areas overlap (e.g. p8861). The parameter is then reset to the factory setting.  
Alarm value (r2124, interpret decimal):  
Parameter number of the BICO input (signal sink).  
**Remedy:** Not necessary.  
Reaction upon F: NONE  
Acknowl. upon F: IMMEDIATELY

<b>A01590 (F)</b>	<b>Drive: Motor maintenance interval expired</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The selected service/maintenance interval for this motor was reached. Alarm value (r2124, interpret decimal): Motor data set number. See also: p0650 (Actual motor operating hours), p0651 (Motor operating hours maintenance interval)
<b>Remedy:</b>	carry out service/maintenance and reset the service/maintenance interval (p0651).
<b>Reaction upon F:</b>	NONE
<b>Acknowl. upon F:</b>	IMMEDIATELY
<b>F01600</b>	<b>SI CU: STOP A initiated</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected a fault and initiated a STOP A (pulse suppression via the safety shutdown path of the Control Unit). - forced checking procedure of the safety shutdown path of the Control Unit unsuccessful. - subsequent response to fault F01611 (defect in a monitoring channel). Fault value (r0949, interpret decimal): 0: Stop request from the Motor Module. 1005: Pulses suppressed although STO not selected and there is no internal STOP A present. 1010: Pulses enabled although STO is selected or an internal STOP A is present. 1015: Feedback of the safe pulse suppression for Motor Modules connected in parallel are different. 9999: Subsequent response to fault F01611.
<b>Remedy:</b>	- select Safe Torque Off and de-select again. - replace the Motor Module involved. For fault value = 9999: - carry out diagnostics for fault F01611. Note: CU: Control Unit MM: Motor Module SI: Safety Integrated STO: Safe Torque Off / SH: Safe standstill
<b>F01611</b>	<b>SI CU: Defect in a monitoring channel</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE (OFF1, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected a fault in the crosswise data comparison between the CU and Motor Module (MM) and initiated a STOP F. As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.

Fault value (r0949, interpret decimal):

0: Stop request from the Motor Module.

1 ... 999:

Number of the cross-compared data that resulted in this fault. This number is also displayed in r9795.

1: SI monitoring clock cycle (r9780, r9880).

2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.

3: SI SGE changeover tolerance time (p9650, p9850).

4: SI transition period STOP F to STOP A (p9658, p9858).

5: SI enable Safe Brake Control (p9602, p9802).

6: SI Motion enable, safety-relevant functions (p9501, internal value).

7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).

8: SI PROFIsafe address (p9610, p9810).

9: SI debounce time for STO/SBC/SS1 (MM) (p9651, p9851).

10: SI delay time for pulse suppression for ESR (p9697, p9897).

11: SI Safe Brake Adapter mode, BICO interconnection (p9621, p9821).

12: SI Safe Brake Adapter relay ON time (p9622[0], p9822[0]).

13: SI Safe Brake Adapter relay OFF time (p9622[1], p9822[1]).

14: SI PROFIsafe telegram selection (p9611, p9811).

1000: Watchdog timer has expired.

Within the time of approx. 5 x p9650, alternatively, the following was defined:

- Too many switching operations have occurred at the EP terminal of the Motor Module.

- Via PROFIsafe/TM54F, STO was too frequently initiated (also as subsequent response).

- Safe pulse cancellation (r9723.9) was too frequently initiated (also as subsequent response).

1001, 1002: Initialization error, change timer / check timer.

1900: CRC error in the SAFETY sector.

1901: CRC error in the ITCM sector.

1902: Overloading in the ITCM sector has occurred in operation.

1950: Module temperature outside the permissible temperature range.

1951: Module temperature not plausible.

2000: Status of the STO selection on the Control Unit and Motor Module are different.

2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.

2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different (status of the timer in p9650/p9850).

2004: Status of the STO selection for modules connected in parallel are different.

2005: Feedback signal of the safe pulse suppression on the Control Unit and Motor Modules connected in parallel are different.

6000 ... 6999:

Error in the PROFIsafe control.

For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.

The significance of the individual message values is described in safety message C01711.

#### **Remedy:**

Re fault value = 1 ... 5 and 7 ... 999:

- check the cross data comparison that resulted in a STOP F.

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- upgrade the Control Unit software.

For fault value = 6:

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- upgrade the Control Unit software.

For fault value = 1000:

- check the EP terminal at the Motor Module (contact problems).

- PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller.

- check the wiring of the failsafe inputs at the TM54F (contact problems).

Re fault value = 1001, 1002:

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- upgrade the Control Unit software.

Re fault value = 1900, 1901, 1902:

- carry out a POWER ON (power off/on) for all components.

- upgrade the Control Unit software.

- replace Control Unit.

Re fault value = 2000, 2001, 2002, 2004, 2005:

- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the causes of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace the Motor Module involved.

Re fault value = 6000 ... 6999:

Refer to the description of the message values in safety message C01711.

Note:

CU: Control Unit

EP: Enable Pulses (pulse enable)

ESR: Extended Stop and Retract

MM: Motor Module

SGE: Safety-relevant input

SI: Safety Integrated

SMM: Safe Motion Monitoring

SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

STO: Safe Torque Off / SH: Safe standstill

---

### **F01612 SI CU: STO inputs for power units connected in parallel different**

**Message value:** Fault cause: %1 bin

**Drive object:** VECTOR\_G

**Reaction:** NONE (OFF1, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive-integrated "Safety Integrated" function on the Control Unit (CU) has identified different states of the AND'ed STO inputs for power units connected in parallel and has initiated a STOP F.  
As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.

Fault value (r0949, interpret binary):

Binary image of the digital inputs of the Control Unit that are used as signal source for the function "Safe Torque Off".

**Remedy:** - check the tolerance time SGE changeover and if required, increase the value (p9650).  
- check the wiring of the safety-relevant inputs (SGE) (contact problems).

Note:

CU: Control Unit

SGE: Safety-relevant input

<b>F01630</b>	<b>SI CU: Brake control error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected a brake control fault and initiated a STOP A. Fault value (r0949, interpret decimal): Re fault value = 10, 11: Fault in "open holding brake" operation. - Parameter p1278 incorrectly set. - No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)). - Ground fault in brake cable. For fault value = 20: Fault in "brake open" state. - Short-circuit in brake winding.

Re fault value = 30, 31:

Fault in "close holding brake" operation.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC de-activated)).

- Short-circuit in brake winding.

For fault value = 40:

Fault in "brake closed" state.

For fault value = 50:

Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).

For fault value = 80:

Safe Brake Adapter.

Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).

For fault value = 90:

Brake released for service purposes (X4).

Note:

The following causes may apply to fault values:

- motor cable is not shielded correctly.

- defect in control circuit of the Motor Module.

**Remedy:**

- check parameter p1278 (for SBC, only p1278 = 0 is permissible).

- for a parallel connection, check the setting of the power unit data set to control the holding brake (p7015).

- select Safe Torque Off and de-select again.

- check the motor holding brake connection.

- check the function of the motor holding brake.

- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).

- replace the Motor Module involved.

Operation with Safe Brake Module or Safe Brake Adapter:

- check the Safe Brake Module or Safe Brake Adapter connection.

- Replace the Safe Brake Module or Safe Brake Adapter.

Note:

CU: Control Unit

SBC: Safe Brake Control

SI: Safety Integrated

**F01649**

**SI CU: Internal software error**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** An internal error in the Safety Integrated software on the Control Unit has occurred.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret hexadecimal):

Only for internal Siemens troubleshooting.

**Remedy:**

- carry out a POWER ON (power off/on) for all components.

- re-commission the "Safety Integrated" function and carry out a POWER ON.

- Upgrade the firmware of the Control Unit to a later version.

- contact the Hotline.

- replace the Control Unit.

Note:

For fault value = 3003:

- carry out the function checks for the modified hardware and generate an acceptance report.

The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:

SINAMICS S120 Function Manual Safety Integrated

For fault value = 3005:

- carry out the function checks for the modified hardware and generate an acceptance report.

The fault with fault value 3005 can only be acknowledged when the "STO" function is de-selected.

For fault value = 9999:

- carry out diagnostics for the other safety-related fault that is present.

Note:

CU: Control Unit

MM: Motor Module

SI: Safety Integrated

STO: Safe Torque Off

See also: p9799 (SI reference checksum SI parameters (Control Unit)), p9899 (SI reference checksum SI parameters (Motor Module))

---

### **F01651 SI CU: Synchronization safety time slices unsuccessful**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The "Safety Integrated" function requires a synchronization of the safety time slices between the Control Unit (CU) and Motor Module (MM) and between the Control Unit and the higher-level control. This synchronization routine was unsuccessful.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):

121:

- with SINUMERIK Safety Integrated enabled, a drive-side warm restart was performed on the CU/NX.

- with SINUMERIK Safety Integrated enabled, the function "restore factory setting" was selected on a drive object of the CU and a drive-side warm restart was initiated.

150:

- fault in the synchronization to the PROFIBUS master.

All other values:

- only for internal Siemens troubleshooting.

See also: p9510 (SI Motion clock-cycle synchronous PROFIBUS master)

**Remedy:**

For fault value = 121:

- carry out a common POWER ON/warm restart for the higher-level control and SINAMICS.

For fault value = 150:

- check the setting of p9510 (SI Motion clock-cycle synchronous PROFIBUS master) and if required, correct.

General:

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- upgrade the Control Unit software.

- upgrade the software of the higher-level control.

Note:

CU: Control Unit

MM: Motor Module

SI: Safety Integrated

---

### **F01652 SI CU: Illegal monitoring clock cycle**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** One of the Safety Integrated monitoring clock cycles is not permissible.

- the monitoring clock cycle integrated in the drive cannot be maintained due to the communication conditions required in the system.

- the monitoring clock cycle for safe motion monitoring functions is not permissible (p9500).

- the actual value sensing clock cycle for safe motion monitoring functions is not permissible (p9511).
  - The sampling time for the current controller (p0112, p0115[0]) cannot be supported.
- Note:
- This fault results in a STOP A that cannot be acknowledged.
- Fault value (r0949, interpret decimal):
- For motion monitoring functions that are not enabled (p9601.2 = p9801.2 = 0, p9501 = 0), the following applies:
- Minimum setting for the monitoring clock cycle (in  $\mu$ s).
- For motion monitoring functions that are enabled (p9601.2 = p9801.2 = 1 and/or p9501 > 0), the following applies:
- 100:
- No matching monitoring clock cycle was able to be found.
- 101:
- The monitoring clock cycle is not an integer multiple of the actual value sensing clock cycle.
- 102:
- An error has occurred when transferring the actual value sensing clock cycle to the Motor Module (MM).
- 103:
- An error has occurred when transferring the actual value sensing clock cycle to the Sensor Module.
- 104, 105:
- four times the current controller sampling time (p0115[0]) is greater than 1 ms when operating with a non-isochronous PROFIBUS.
  - four times the current controller sampling time (p0115[0]) is greater than the DP clock cycle when operating with an isochronous PROFIBUS.
  - The DP clock cycle is not an integer multiple of the sampling time of the current controller (p0115[0]).
- 106:
- The monitoring clock cycle does not match the monitoring clock cycle of the TM54F.
- 107:
- The actual value sensing clock cycle (p9511) is less than four times the current controller sampling time (p0115[0]).
  - The actual value sensing clock cycle (p9511) is not an integer multiple of the sampling time of the current controller (p0115[0]).
- 108:
- The parameterized actual value sensing clock cycle cannot be set on this component
- 109:
- If the motion monitoring functions have been parameterized as encoderless (p9506), the actual value sensing clock cycle (p9511) and the current controller clock cycle (p0115[0]) must be identical.
- The following applies to SINAMICS S110:
- If the motion monitoring functions have been parameterized as encoderless (p9506), the actual value sensing clock cycle p9511 must be = 250  $\mu$ s.
- 110:
- The actual value sensing clock cycle (p9511) for safety with encoder (p9506 = 0) is less than 2 ms for this Control Unit (e.g. CU305).
- 111:
- The monitoring clock cycle is not an integer multiple of the sampling time of the current controller (p0115[0]).
- 200, 201:
- For the S120M the monitoring clock cycle cannot be maintained as a result of the conditions required in the system.
- 202:
- The current controller sampling time is set to zero (p0115[0]).

**Remedy:**

- For enabled SI monitoring integrated in the drive (p9601/p9801 > 0):
- Upgrade the firmware of the Control Unit to a later version.
- For enabled motion monitoring function (p9501 > 0):
- correct the monitoring clock cycle (p9500) and carry out POWER ON.
- For fault value = 101:
- actual value sensing clock cycle corresponds to position control clock cycle/DP clock cycle (factory setting).
  - for motion monitoring functions integrated in the drive (p9601/p9801bit 2 = 1) the actual value sensing clock cycle can be directly parameterized in P9511/p9311.
- Re fault value = 104, 105:
- set a separate actual value sensing clock cycle in p9511.
  - restrict operation to a maximum of two vector drives. For the standard setting in p0112, p0115, the current controller sampling time is automatically reduced to 250  $\mu$ s. If the standard values were changed, then the current controller sampling time (p0112, p0115) should be appropriately set.
  - increase the DP clock cycle for operation with a clock-cycle synchronous PROFIBUS so that there is a multiple clock cycle ratio of at least 4:1 between the DP clock cycle and the current controller sampling time. A clock cycle ratio of at least 8:1 is recommended.
  - With firmware version 2.5, please ensure that parameter p9510 is set to 1 in the drive (clock cycle synchronous operation).

For fault value = 106:

- set the parameters for the monitoring clock cycles the same (p10000 and p9500 / p9300).

For fault value = 107:

- Set an actual value sensing clock cycle that matches the current controller clock cycle ( $p9511 \geq 4 * p0115[0]$ ,  $8 * p0115[0]$ ) is recommended.

Note:

An actual value sensing clock cycle (p9511) that is set too low, can sporadically mean that safety messages C01711/C30711 are output with message value 1020 or 1021.

For fault value = 108:

- set a suitable actual value sensing clock cycle in p9511.

- if the DP clock cycle is used as the actual value sensing clock cycle for operation with isochronous PROFIBUS ( $p9511 = 0$ ), then a suitable DP clock cycle must be configured. This must be set to less than 8 ms. If this is not possible, then p9511 must be set to the required actual value sensing clock cycle ( $< 8$  ms).

- For SIMOTION D410-2, a suitable multiple of the DP clock cycle (e.g. 1, 2, 3, 4, 5, 6, 8, 10) must be parameterized. Otherwise, the clock cycle must be set to less than 8 ms.

For fault value = 109:

- set the actual value sensing clock cycle in p9511 to the same value as the current controller clock cycle ( $p0115[0]$ ).

The following applies to SINAMICS S110:

- set the actual value sensing clock cycle to  $p9511 = 250 \mu s$ .

For fault value = 110:

- set the actual value sensing clock cycle in p9511 to 2 ms or higher.

For fault value = 111:

- set the monitoring clock cycle in p9500 as an integer multiple of the sampling time of the current controller ( $p0115[0]$ ).

Re fault value = 200, 201:

- Increase the current controller sampling time ( $p0115[0]$ ).

- If required, reduce the number of components connected to the corresponding DRIVE-CLiQ line, or distribute the components across several DRIVE-CLiQ sockets.

For fault value = 202:

- Set the current controller sampling time to a sensible value ( $p0115[0]$ ).

Note:

CU: Control Unit

MM: Motor Module

SI: Safety Integrated

## F01653

### SI CU: PROFIBUS/PROFINET configuration error

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE (OFF1, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** There is a PROFIBUS/PROFINET configuration error for using Safety Integrated monitoring functions with a higher-level control (SINUMERIK or F-PLC).

Note:

For safety functions that have been enabled, this fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):

200: A safety slot for receive data from the control has not been configured.

210, 220: The configured safety slot for the receive data from the control has an unknown format.

230: The configured safety slot for the receive data from the F-PLC has the incorrect length.

231: The configured safety slot for the receive data from the F-PLC has the incorrect length.

240: The configured safety slot for the receive data from the SINUMERIK has the incorrect length.

250: A PROFIsafe slot is configured in the higher-level F control, however PROFIsafe is not enabled in the drive.

300: A safety slot for the send data to the control has not been configured.

310, 320: The configured safety slot for the send data to the control has an unknown format.

330: The configured safety slot for the send data to the F-PLC has the incorrect length.

331: The configured safety slot for the send data to the F-PLC has the incorrect length.

340: The configured safety slot for the send data to the SINUMERIK has the incorrect length.

**Remedy:** The following generally applies:

- check and, if necessary, correct the PROFIBUS/PROFINET configuration of the safety slot on the master side.  
- upgrade the Control Unit software.

For fault value = 250:

- remove the PROFIsafe configuring in the higher-level F control or enable PROFIsafe in the drive.

Re fault value = 231, 331:  
- configure the PROFIsafe telegram matching the parameterization in the F-PLC.  
The following applies for p9501.30 = 1 (F-DI via PROFIsafe is enabled):  
- PROFIsafe telegram 900 must be configured.  
For p9501.30 = 0 (F-DI not enabled via PROFIsafe), the following applies:  
- PROFIsafe telegram 30 must be configured.

# **F01659 SI CU: Write request for parameter rejected**

**Message value:** %1  
**Drive object:** TM54F\_MA, TM54F\_SL  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The write request for one or several Safety Integrated parameters on the Control Unit (CU) was rejected.  
 Note:  
 This fault does not result in a safety stop response.  
 Fault value (r0949, interpret decimal):  
 1: The Safety Integrated password is not set.  
 2: A reset of the drive parameters was selected. However, the Safety Integrated parameters were not reset, as Safety Integrated is presently enabled.  
 3: The interconnected STO input is in the simulation mode.  
 10: An attempt was made to enable the STO function although this cannot be supported.  
 11: An attempt was made to enable the SBC function although this cannot be supported.  
 12: An attempt was made to enable the SBC function although this cannot be supported for a parallel circuit configuration (r9871.14).  
 13: An attempt was made to enable the SS1 function although this cannot be supported.  
 14: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different.  
 15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.  
 16: An attempt was made to enable the STO function although this cannot be supported when the internal voltage protection (p1231) is enabled.  
 17: An attempt was made to enable the PROFIsafe function although this cannot be supported for a parallel circuit configuration.  
 18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported.

19: An attempt was made to enable the SBA (Safe Brake Adapter), although this cannot be supported.  
 20: An attempt was made to enable the motion monitoring functions integrated in the drive and the STO function, both controlled via F-DI.  
 21: An attempt was made to enable the motion monitoring functions integrated in the drive for a parallel connection, although these cannot be supported.  
 22: An attempt was made to enable the Safety Integrated functions although these cannot be supported by the connected Power Module.  
 23: For ESR, an attempt was made to enable the delay for pulse suppression, although this cannot be supported.  
 24: An attempt was made to enable the SBC function, although no power unit data set is set for the brake control (p7015 = 99).  
 25: An attempt was made to parameterize a PROFIsafe telegram although this cannot be supported.  
 26: At a digital input of the Control Unit, an attempt was made to activate the simulation mode (p0795), which is used by Safety Integrated (p10049).  
 33: An attempt was made to enable the motion monitoring functions without selection integrated in the drive (p9601.5, p9801.5), although this cannot be supported.

**Remedy:**

For fault value = 1:  
 - set the Safety Integrated password (p10061).  
 For fault value = 2:  
 - Inhibit Safety Integrated (p9501, p9601) or reset safety parameters (p0970 = 5), then reset the drive parameters again.  
 For fault value = 3:  
 - end the simulation mode for the digital input (p0795).  
 Re fault value = 10, 11, 12, 13, 14, 15, 17, 18, 19, 21, 22, 23:  
 - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.  
 - use a Motor Module that supports the required function.  
 - upgrade the Motor Module software.  
 - upgrade the Control Unit software.  
 For fault value = 16:  
 - inhibit the internal voltage protection (p1231).  
 For fault value = 20:  
 - correct setting in p9601.  
 For fault value = 22:  
 - use a Power Module that supports the Safety Integrated functions.

<b>F01660</b>	<b>SI CU: Safety-related functions not supported</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The Motor Module (MM) does not support the safety-related functions (e.g. the Motor Module version is not the correct one). Safety Integrated cannot be commissioned. Note: This fault does not result in a safety stop response.
<b>Remedy:</b>	- use a Motor Module that supports the safety-related functions. - upgrade the Motor Module software. Note: CU: Control Unit

MM: Motor Module  
SI: Safety Integrated

<b>F01661</b>	<b>SI CU: Simulation of the safety inputs active</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The simulation of the digital inputs of the Control Unit (p0795) is active. It is not permissible that safety inputs (refer to p9620, p10022 ... p10032) are simulated. Fault value (r0949, interpret binary): The display bits indicate which DIs may not be simulated.
<b>Remedy:</b>	Deactivate the simulation of the digital inputs of the Control Unit for the safety inputs (refer to p795) and acknowledge the fault.
<b>F01663</b>	<b>SI CU: Copying the SI parameters rejected</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	One of the following values is saved in p9700 or was entered offline: 87 or 208. This is the reason that when booting, an attempt is made to copy SI parameters from the Control Unit to the Motor Module. However, no safety-relevant function has been selected on the Control Unit (p9501 = 0, p9601 = 0). Copying was rejected for safety reasons. As a consequence, inconsistent parameterization can occur in both monitoring channels, which in turn results in additional error messages. Especially for inconsistent enabling of the safety functions on both monitoring channels (p9601 = 0, p9801 <> 0), fault F30625 is output. Note: This fault does not result in a safety stop response. See also: p9700 (SI Motion copy function)
<b>Remedy:</b>	- Set p9700 to 0. - Check p9501 and p9601 and if required, correct. - Restart the copying function by entering the corresponding value into p9700. Alternatively, using the STARTER commissioning tool, perform the following steps in the online mode: - Call the "Safety Integrated" screen form (the field "Select safety functions" is at "No Safety Integrated"). - Click on "Change settings". - Click on "Activate settings" (as a consequence, Safety Integrated is inhibited on both monitoring channels). - save all parameters (p0977 = 1 or "copy RAM to ROM"). - carry out a POWER ON (power off/on) for all components.
<b>F01664</b>	<b>SI CU: No automatic firmware update</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	During booting, the system detected that the "Firmware update automatic" function (p7826 = 1) was not activated. This function must be activated for automatic firmware updates/downgrades to prevent impermissible version combinations when safety functions are enabled. Note: This fault does not result in a safety stop response. See also: p7826 (Firmware update automatic)
<b>Remedy:</b>	When safety functions are enabled (p9501 <> 0 and/or p9601 <> 0): 1. Activate the "Firmware update automatic" function (p7826 = 1). 2. Save the parameters (p0977 = 1) and carry out a POWER ON. When de-activating the safety functions (p9501 = 0, p9601 = 0), the fault can be acknowledged after exiting the safety commissioning mode.

<b>F01665</b>	<b>SI CU: System is defective</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>A system defect was detected before the last boot or in the actual one. The system might have been rebooted (reset).            Fault value (r0949, interpret hexadecimal):            200000 hex, 400000 hex, 8000yy hex (yy any):            - Fault in the actual booting/operation.            800004 hex:            - Parameters p9500/p9300 are, under certain circumstances, not the same. In addition, Safety message C01711/C30711 is displayed.            Additional values:            - defect before the last time that the system booted.</p>
<b>Remedy:</b>	<p>- carry out a POWER ON (power off/on).            - upgrade firmware to later version.            - contact the Hotline.            Re fault value = 200000 hex, 400000 hex, 8000yy hex (yy any):            - ensure that the Control Unit is connected to the Power Module.            Re fault value = 800004 hex:            - Check that parameters p9500/p9300 are the same.</p>
<b>A01666 (F)</b>	<b>SI Motion CU: Steady-state (static) 1 signal at the F-DI for safety-relevant acknowledgement</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	<p>A logical 1 signal is present at the F-DI configured in p10006 for more than 10 seconds.            If, at the F-DI no acknowledgment was performed for safe acknowledgment, then a steady-state logical and 0 signal must be present. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.</p>
<b>Remedy:</b>	<p>Set the fail-safe digital input (F-DI) to a logical 0 signal (p10006).            Note:            F-DI: Failsafe Digital Input</p>

<b>F01671</b>	<b>SI Motion: Parameterization encoder error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>The parameterization of the encoder used by Safety Integrated is different to the parameterization of the standard encoder.</p> <p>Note:</p> <p>This fault does not result in a safety stop response.</p> <p>Fault value (r0949, interpret decimal):</p> <p>Parameter number of the non-corresponding safety parameter.</p>

**Remedy:** Align the encoder parameterization between the safety encoder and the standard encoder.  
**Note:**  
SI: Safety Integrated

---

**F01672 SI CU: Motor Module software/hardware incompatible**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The existing Motor Module software does not support safe motion monitoring or is not compatible to the software on the Control Unit or there is a communications error between the Control Unit and Motor Module.

**Note:**

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):

1: The existing Motor Module software does not support the safe motion monitoring function.

2, 3, 6, 8: There is a communications error between the Control Unit and Motor Module.

4, 5, 7: The existing Motor Module software is not compatible to the software on the Control Unit.

9, 10, 11, 12: The actual Motor Module software does not support safe encoderless motion monitoring.

13: At least one Motor Module in parallel operation does not support the safe motion monitoring function.

**Remedy:** - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.

For fault value = 1:

- use a Motor Module that supports safe motion monitoring.

Re fault value = 2, 3, 6, 8:

- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re fault value = 4, 5, 7, 9, 13:

- upgrade the Motor Module software.

**Note:**

SI: Safety Integrated

**F01686 SI Motion: Illegal parameterization cam position**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** At least one enabled "Safety Cam" (SCA) is parameterized in p9536 or p9537 too close to the tolerance range around the modulo position.

The following conditions must be complied with to assign cams to a cam track:

- the cam length of cam x = p9536[x]-p9537[x] must be greater or equal to the cam tolerance + the position tolerance (= p9540 + p9542). This also means that for cams on a cam track, the minus position value must be less than the plus position value.

- the distance between 2 cams x and y (minus position value[y] - plus position value[x] = p9537[y] - p9536[x]) on a cam track must be greater than or equal to the cam tolerance + position tolerance (= p9540 + p9542).

Note:

This fault does not result in a safety stop response.

Fault value (r0949, interpret decimal):

Number of the "Safe Cam" with an illegal position.

See also: p9501 (SI Motion enable safety functions (Control Unit))

**Remedy:**

Correct the cam position and carry out a POWER ON.

Note:

SCA: Safe Cam / SN: Safe software cam

SI: Safety Integrated

See also: p9536 (SI Motion SCA (SN) plus cam position (Control Unit)), p9537 (SI Motion SCA (SN) plus cam position (Control Unit))

**F01687 SI Motion: Illegal parameterization modulo value SCA (SN)**

**Message value:**

-

**Drive object:**

VECTOR\_G

**Reaction:**

OFF2

**Acknowledge:**

IMMEDIATELY (POWER ON)

**Cause:**

The parameterized modulo value for the "Safe Cam" (SCA) function is not a multiple of 360 000 mDegrees.

Note:

This fault does not result in a safety stop response.

**Remedy:**

Correct the modulo value for SCA and carry out a POWER ON.

Note:

SCA: Safe Cam / SN: Safe software cam

SI: Safety Integrated

See also: p9505 (SI Motion SP modulo value (Control Unit))

---

**F01688 SI Motion CU: Actual value synchronization not permissible**

**Message value:**

-

**Drive object:**

VECTOR\_G

**Reaction:**

OFF2

**Acknowledge:**

IMMEDIATELY (POWER ON)

**Cause:**

- It is not permissible to enable actual value synchronization for a 1-encoder system.

- It is not permissible to simultaneously enable actual value synchronization and a monitoring function with absolute reference (SCA/SLP).

- It is not permissible to simultaneously enable actual value synchronization and safe position via PROFIsafe.

Note:

This fault results in a STOP A that cannot be acknowledged.

**Remedy:**

- Either select the "actual value synchronization" function or parameterize a 2-encoder system.

- Either de-select the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON.

- Either deselect the "actual value synchronization" function or do not enable "Safe position via PROFIsafe".

Note:

SCA: Safe Cam / SN: Safe software cam

SI: Safety Integrated

SLP: Safely-Limited Position / SE: Safe software limit switches

SP: Safe Position

<b>C01689</b>	<b>SI Motion: Axis re-configured</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	The axis configuration was changed (e.g. changeover between linear axis and rotary axis). Parameter p0108.13 is internally set to the correct value. Note: This fault does not result in a safety stop response. Fault value (r0949, interpret decimal): Parameter number of parameter that initiated the change. See also: p9502 (SI Motion axis type (Control Unit))
<b>Remedy:</b>	The following should be carried out after the changeover: - exit the safety commissioning mode (p0010). - save all parameters (p0977 = 1 or "copy RAM to ROM"). - carry out a POWER ON. Once the Control Unit has been switched on, safety message F01680 or F30680 indicates that the checksums in r9398[0] and r9728[0] have changed in the drive. The following must, therefore, be carried out: - activate safety commissioning mode again. - complete safety commissioning of the drive. - exit the safety commissioning mode (p0010). - save all parameters (p0977 = 1 or "copy RAM to ROM"). - carry out a POWER ON. Note: For the commissioning software, the units are only consistently displayed after a project upload.

**A01695 (F) SI Motion: Sensor Module was replaced**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** A Sensor Module, which is used for safe motion monitoring functions, was replaced. The hardware replacement must be acknowledged. An acceptance test must be subsequently performed.

**Note:**  
This message does not result in a safety stop response.

**Remedy:** Carry out the following steps using the STARTER commissioning software:

- press the "Acknowledge hardware replacement" button in the safety screen form.
- execute the function "Copy RAM to ROM".
- carry out a POWER ON (power off/on) for all components.

As an alternative, carry out the following steps in the expert list of the commissioning software:

- start the copy function for the node identifier on the drive (p9700 = 1D hex).
- acknowledge the hardware CRC on the drive (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

Then carry out an acceptance test (refer to the Safety Integrated Function Manual).

For SINUMERIK, the following applies:

HMI supports the replacement of components with Safety functions (operating area "Diagnostics" --> Softkey "Alarm list" --> Softkey "Confirm SI HW" etc.).

The precise procedure is given in the following document:  
SINUMERIK Function Manual Safety Integrated

**A01696 (F) SI Motion: Testing of the motion monitoring functions selected when booting**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The test of the motion monitoring functions was already illegally active when booting.

This is the reason that the test is only carried out again after selecting the forced checking procedure parameterized in p9705.

**Note:**  
This message does not result in a safety stop response.  
See also: p9705 (SI Motion: Test stop signal source)

**Remedy:** De-select the forced checking procedure of the safety motion monitoring functions and then select again.

The signal source for initiation is parameterized in binector input p9705.

**Notice:**  
It is not permissible to use TM54F inputs to start the test stop.

**Note:**  
SI: Safety Integrated

**C01700 SI Motion CU: STOP A initiated**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit).

Possible causes:

- stop request from the second monitoring channel.
- pulses not suppressed after a parameterized time (p9557) after test stop selection.
- subsequent response to the message C01706 "SI Motion CU: SAM/SBR limit exceeded".
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01701 "SI Motion CU: STOP B initiated".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded".

**Remedy:**

- remove the cause of the fault on the second monitoring channel.
- carry out a diagnostics routine for message C01706.
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01701.
- carry out a diagnostics routine for message C01715.
- carry out a diagnostics routine for message C01716.
- check the value in p9557 (where available), increase the value if necessary, and carry out a POWER ON
- check the shutdown path of the Control Unit (check DRIVE-CLiQ communication if it has been implemented)
- replace the Motor Module/Power Module
- replace Control Unit.

This message can be acknowledged without a POWER ON as follows:

- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only

Note:

SAM: Safe Acceleration Monitor (safe acceleration monitoring)

SBR: Safe Brake Ramp (safe brake ramp monitoring)

(p9560/p9360)</p>

- 43: Memory test, stop response (STOP A).  
 44 ... 57: General  
 Possible cause 1 (during commissioning or parameter modification)  
 The tolerance value for the monitoring function is not the same on the two monitoring channels.  
 Possible cause 2 (during active operation)  
 The limit values are based on the actual value (r9713). If the safe actual values on the two monitoring channels do not match, the limit values, which have been set at a defined interval, will also be different (i.e. corresponding to fault value 3). This can be ascertained by checking the safe actual positions.  
 44: Position actual value (r9713) + limit value for SLS1 (p9531[0]/p9331[0]) \* Safety monitoring clock cycle  
 45: Position actual value (r9713) - limit value for SLS1 (p9531[0]/p9331[0]) \* Safety monitoring clock cycle  
 46: Position actual value (r9713) + limit value for SLS2 (p9531[1]/p9331[1]) \* Safety monitoring clock cycle  
 47: Position actual value (r9713) - limit value for SLS2 (p9531[1]/p9331[1]) \* Safety monitoring clock cycle  
 48: Position actual value (r9713) + limit value for SLS3 (p9531[2]/p9331[2]) \* Safety monitoring clock cycle  
 49: Position actual value (r9713) - limit value for SLS3 (p9531[2]/p9331[2]) \* Safety monitoring clock cycle  
 50: Position actual value (r9713) + limit value for SLS4 (p9531[3]/p9331[3]) \* Safety monitoring clock cycle  
 51: Position actual value (r9713) - limit value for SLS4 (p9531[3]/p9331[3]) \* Safety monitoring clock cycle  
 52: Standstill position + tolerance (p9530/9330)  
 53: Standstill position - tolerance (p9530/9330)  
 54: Position actual value (r9713) + limit value nx (p9546/p9346) + tolerance (p9542/p9342)  
 55: Position actual value (r9713) + limit value nx (p9546/p9346)  
 56: Position actual value (r9713) - limit value nx (p9546/p9346)  
 57: Position actual value (r9713) - limit value nx (p9546/p9346) - tolerance (p9542/p9342)  
 58: Actual stop request.  
 75: Velocity limit nx (p9546, p9346).  
 When the function "n<nx: hysteresis and filtering" (p9501.16=1) is enabled, this fault value is also output for a different hysteresis tolerance ( p9547/p9347).  
 76: Stop response for SLS1 (p9563[0]/p9363[0])  
 77: Stop response for SLS2 (p9563[1]/p9363[1])  
 78: Stop response for SLS3 (p9563[2]/p9363[2])  
 79: Stop response for SLS4 (p9563[3]/p9363[3])

 233: Limit value nx / safety monitoring clock cycle + hysteresis tolerance.  
 234: Limit value nx / Safety monitoring clock cycle.  
 235: -Limit value nx / Safety monitoring clock cycle.  
 236: -Limit value nx / safety monitoring clock cycle - hysteresis tolerance.  
 237: SGA n < nx.  
 238: Speed limit value for SAM (p9568/p9368).  
 239: Acceleration for SBR (p9581/p9381 and p9583/p9383).  
 240: Inverse value of acceleration for SBR (p9581/p9381 and p9583/p9383).  
 241: Deceleration time for SBR (p9582/p9382).  
 242: Encoderless safety (p9506/p9306).  
 243: Extended alarm acknowledgment (p9507/p9307).  
 244: Encoderless actual value sensing filter time (p9587/p9387).  
 245: Encoderless actual value sensing minimum current (p9588/p9388).  
 246: Voltage tolerance acceleration (p9589/p9389).  
 247: SDI tolerance (p9564/p9364).  
 248: SDI positive upper limit (0x7ffffff).  
 249: Position actual value (r9713) - SDI tolerance.  
 250: Position actual value (r9713) + SDI tolerance.  
 251: SDI negative lower limit (0x80000001).  
 252: SDI stop response (p9566/p9366).  
 253: SDI delay time (p9565/p9365).  
 254: Setting the evaluation delay for actual value sensing after pulse enable (p9586/p9386).

255: Setting, behavior during pulse suppression (p9509/p9309).

256: Status image of monitoring functions SOS, SLS, SLP, test stop, SBR, SDI (result list 1 ext) (r9710).

257: Safety functions for motion monitoring functions without selection (p9512/p9312) different.

258: Fault tolerance, actual value sensing encoderless (p9585/p9385).

259: Scaling factor for safe position via PROFIsafe (p9574/p9374) different.

260: Modulo value including scaling (p9505/p9305 and p9574/p9374) for SP with 16 bit.

261: Scaling factor for acceleration for SBR different.

262: Scaling factor for the inverse value of the acceleration for SBR different.

263: Stop response for SLP2 (p9562[1]/p9362[1])

264: Position tolerance including scaling (p9542/p9342 and p9574/p9374) for SP with 16 bit.

1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.

1001: Initialization error of watchdog timer.

1002:  
User agreement after the timer has expired different.  
The user agreement is not consistent. After a time of 2 s has expired, the status of the user agreement is different in both monitoring channels.

1003:  
Reference tolerance exceeded.  
When the user agreement is set, the difference between the new reference point that has been determined after power up (absolute encoder) or reference point approach (distance-coded or incremental measuring system) and the safe actual position (saved value + traversing distance) is greater than the reference tolerance (p9544). In this case, the user agreement is withdrawn.

1004:  
Plausibility error for user agreement.

1. If the user agreement has already been set, then setting is initiated again. In this case, the user agreement is withdrawn.
2. The user agreement was set, although the axis has still not been referenced.

1005:  
- For safe motion monitoring functions without encoder: pulses already suppressed for test stop selection.  
- For safe motion monitoring functions with encoder: STO already active for test stop selection.

1011: Acceptance test status between the monitoring channels differ.

1012: Plausibility violation of the actual value from the encoder.

1020: Cyc. communication failure between the monit. cycles.

1021: Cyc. communication failure between the monit. channel and Sensor Module.

1022: Sign-of-life error for DRIVE-CLiQ encoder CU

1023: Error in the effectiveness test in the DRIVE-CLiQ encoder

1032: Sign-of-life error for DRIVE-CLiQ encoder MM

1033: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder CU

1034: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder MM

1041: Current absolute value too low (encoderless)

1042: Current/voltage plausibility error

1043: Too many acceleration phases

1044: Actual current values plausibility error.

5000 ... 5140:  
PROFIsafe message values.  
For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.

5000, 5014, 5023, 5024, 5030 ... 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140: An internal software error has occurred (only for internal Siemens troubleshooting).

5012: Error when initializing the PROFIsafe driver.

5013: The result of the initialization is different for the two controllers.

5022: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.

5025: The result of the F parameterization is different for the two controllers.

5026: CRC error for the F parameters. The transferred CRC value of the F parameters does not match the value calculated in the PST.

5065: A communications error was identified when receiving the PROFIsafe telegram.

5066: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.

6000 ... 6166:  
PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).  
For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.

6000: A fatal PROFIsafe communication error has occurred.

6064 ... 6071: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.

6064: Destination address and PROFIsafe address are different (F\_Dest\_Add).

6065: Destination address not valid (F\_Dest\_Add).  
6066: Source address not valid (F\_Source\_Add).  
6067: Watchdog time not valid (F\_WD\_Time).  
6068: Incorrect SIL level (F\_SIL).  
6069: Incorrect F-CRC length (F\_CRC\_Length).  
6070: Incorrect F parameter version (F\_Par\_Version).  
6071: CRC error for the F parameters (CRC1). The transferred CRC value of the F parameters does not match the value calculated in the PROFIsafe driver.  
6072: F parameterization is inconsistent.  
6165: A communications error was identified when receiving the PROFIsafe telegram. The fault may also occur if an inconsistent or out-of-date PROFIsafe telegram has been received after switching the Control Unit off and on or after plugging in the PROFIBUS/PROFINET cable.  
6166: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.  
7000: Difference of the safe position is greater than the parameterized tolerance (p9542/p9342).  
7001: Scaling value for the safe position in the 16 bit notation, too low (p9574/p9374).  
7002: Cycle counter for transferring the safe position is different in both monitoring channels.  
See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

**Remedy:**

The following generally applies:

The monitoring clock cycles in both channels and the axis types should be checked for equality and the same setting applied if necessary. If the error continues to be identified, increasing the monitoring clock cycles may resolve it.

Re message value = 0:

- no error was identified in this monitoring channel. Note the error message of the other monitoring channel (for MM: C30711).

Re message value = 3:

Commissioning phase:

Encoder evaluation for own or second channel has been set incorrectly --> Correct the encoder evaluation.

In operation:

Check the mechanical design and the encoder signals.

Re message value = 4:

The monitoring clock cycles in both channels should be checked for equality and if required, set the same. In combination with fault value 5 from the other monitoring channel (with MM: C30711), the monitoring clock cycle settings must be increased.

Re message value = 232:

- increase the hysteresis tolerance (p9547/p9347). Possibly set the filtering higher (p9545/p9345).

Re message value = 1 ... 999:

- if the message value is listed under cause: Check the crosswise-compared parameters to which the message value refers.

- copy the safety parameters.

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- upgrade the Control Unit software.

- correction of the encoder evaluation. The actual values differ as a result of mechanical faults (V belts, travel to a mechanical endstop, wear and window setting that is too narrow, encoder fault, ...).

Re message value = 1000:

- investigate the signal associated with the safety-relevant input (contact problems).

Re message value = 1001:

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- upgrade the Control Unit software.

Re message value = 1002:

- Perform safe acknowledgment, set the user agreement in both monitoring channels simultaneously (within 2 s).

Re message value = 1003:

- check the mechanical system of the axis. It is possible that the axis was shifted when switched-off, and the last saved actual position no longer corresponds with the new actual position after the system has been powered up again.

- Increase the tolerance for the actual value comparison when referencing (p9544).

Then check the actual values, perform a POWER ON and set the user agreement again.

Re message value = 1004:

For 1., the following applies: Perform safe acknowledgment. Set the user agreement again.

For 2., the following applies: Perform safe acknowledgment. Only set the user agreement again if the axis has been referenced.

Re message value = 1005:

- For safe motion monitoring functions without encoder: check the conditions for pulse enable.
- For safe motion monitoring functions with encoder: check the conditions for STO deselection.

Note:

For a power module, the test stop should always be performed for pulse enable (independent of whether with encoder or without encoder).

Re message value = 1011:

- for diagnostics, refer to parameter (r9571).

Re message value = 1012:

- upgrade the Sensor Module software.
- for 1-encoder systems, the following applies: check the encoder parameters for equality (p9515/p9315, p9519/p9319, p9523/p9323, p9524/p9324, p9525/p9325, p9529/p9329).
- For DQI encoders the following applies: If required, upgrade the firmware version of the Control Unit to a more recent version, which is released for DQI encoders.
- check the electrical cabinet design and cable routing for EMC compliance

Re message value = 1020, 1021:

- check the communication link.
- increase the monitoring cycle clock settings (p9500, p9511).
- carry out a POWER ON (power off/on) for all components.
- replace the hardware.

Re message value = 1033:

- If required, upgrade the firmware version of the Control Unit to a more recent version, which is released for DQI encoders.

Re message value = 1041:

- Check whether the motor has sufficient current ( $>r9785[0]$ ).
- reduce the minimum current (p9588).
- for synchronous motors increase the absolute value of p9783.
- Check whether the function "Closed-loop controlled operation with HF signal injection" is activated (p1750.5 = 1) and if required, deactivate.

Re message value = 1042:

- increase the ramp-function generator ramp-up/down time (p1120/p1121).
- check that the current/speed control is set correctly (torque-generating/field-generating current and actual speed value may not fluctuate).
- reduce the dynamic response of the setpoint value.
- Check the absolute current and voltage values, and set the control behavior so that this is greater than 3% of the rated converter data in operation or in the case of a fault.

Re message value = 1043:

- increase the voltage tolerance (p9589).
- increase the ramp-function generator ramp-up/down time (p1120/p1121).
- check that the current/speed control is set correctly (torque-generating/field-generating current and actual speed value may not fluctuate).
- reduce the dynamic response of the setpoint value.

Re message value = 5000, 5014, 5023, 5024, 5030, 5031, 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140:

- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

Re message value = 5012:

- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810). It is not permissible for the PROFIsafe address to be 0 or FFFF!

Re message value = 5013, 5025:

- carry out a POWER ON (power off/on) for all components.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re message value = 5022:

- check the setting of the values of the F parameters at the PROFIsafe slave (F\_SIL, F\_CRC\_Length, F\_Par\_Version, F\_Source\_Add, F\_Dest\_add, F\_WD\_Time).

Re message value = 5026:

- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and update.

Re message value = 5065:

- check the configuration and communication at the PROFIsafe slave (cons. No. / CRC).
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re message value = 5066:

- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFIsafe connection.

Re message value = 6000:

- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- increase the monitoring cycle clock settings (p9500, p9511).
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

Re message value = 6064:

- check the setting of the value in the F parameter F\_Dest\_Add at the PROFIsafe slave.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).

Re message value = 6065:

- check the setting of the value in the F parameter F\_Dest\_Add at the PROFIsafe slave. It is not permissible for the destination address to be either 0 or FFFF!

Re message value = 6066:

- check the setting of the value in the F parameter F\_Source\_Add at the PROFIsafe slave. It is not permissible for the source address to be either 0 or FFFF!

Re message value = 6067:

- check the setting of the value in the F parameter F\_WD\_Time at the PROFIsafe slave. It is not permissible for the watch time to be 0!

Re message value = 6068:

- check the setting of the value in the F parameter F\_SIL at the PROFIsafe slave. The SIL level must correspond to SIL2!

Re message value = 6069:

- check the setting of the value in the F parameter F\_CRC\_Length at the PROFIsafe slave. The setting of the CRC2 length is 2-byte CRC in the V1 mode and 3-byte CRC in the V2 mode!

Re message value = 6070:

- check the setting of the value in the F parameter F\_Par\_Version at the PROFIsafe slave. The value for the F parameter version is 0 in the V1 mode and 1 in the V2 mode!

Re message value = 6071:

- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and, if required, update.

Re message value = 6072:

- check the settings of the values for the F parameters and, if required, correct.

The following combinations are permissible for F parameters F\_CRC\_Length and F\_Par\_Version:

F\_CRC\_Length = 2-byte CRC and F\_Par\_Version = 0

F\_CRC\_Length = 3-byte CRC and F\_Par\_Version = 1

Re message value = 6165:

- if the fault occurs after powering up the Control Unit or after plugging in the PROFIBUS/PROFINET cable, acknowledge the fault.

- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re message value = 6166:

- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F\_WD\_Time on the PROFIsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFIsafe connection.

Re message value = 7000:

- Increase the position tolerance (p9542/p9342).
- Determine the actual position of CU (r9713[0] and the second channel r9713[1], and check the difference for plausibility.
- Reduce the difference of the actual position from CU (r9713[0] and the second channel r9713[1] for a 2-encoder system.

Re message value = 7001:

- Increase the scaling value for the safe position in the 16 bit notation (p9574/p9374).
- If required, reduce the traversing range.

Re message value = 7002:

- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

This message can be acknowledged as follows:

- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

## **C01712 SI Motion CU: Defect in F-IO processing**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** When cross checking and comparing the two monitoring channels, the drive detected a difference between parameters or results of the F-IO processing and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.

The safety message C01711 with message value 0 is also displayed due to initiation of STOP F.

If at least one monitoring function is active, the safety message C01701 "SI Motion: STOP B initiated" is output after the parameterized timer has expired.

Message value (r9749, interpret decimal):

Number of the cross-compared data that resulted in this message.

- 1: SI discrepancy monitoring time inputs (p10002, p10102).
- 2: SI acknowledgement internal event input terminal (p10006, p10106).
- 3: SI STO input terminal (p10022, p10122).
- 4: SI SS1 input terminal (p10023, p10123).
- 5: SI SS2 input terminal (p10024, p10124).
- 6: SI SOS input terminal (p10025, p10125).
- 7: SI SLS input terminal (p10026, p10126).
- 8: SI SLS\_Limit(1) input terminal (p10027, p10127).
- 9: SI SLS\_Limit(2) input terminal (p10028, p10128).
- 10: SI Safe State signal selection (p10039, p10139).
- 11: SI F-DI input mode (p10040, p10140).
- 12: SI F-DO 0 signal sources (p10042, p10142).
- 13: Different states for static inactive signal sources (p10006, p10022 ... p10031).
- 14: SI discrepancy monitoring time outputs (p10002, p10102).
- 15: SI acknowledgment internal event (p10006, p10106).
- 16: SI test sensor feedback signal test mode selected for test stop (p10046, p10146, p10047, p10147).
- 17: SI delay time for test stop at DOs (p10001).
- 18 ... 25: SI test sensor feedback signal (p10046, p10146, p10047, p10147). Expected state of internal readback signal, generated from the selected test stop mode.
- 26 ... 33: SI test sensor feedback signal (p10046, p10146, p10047, p10147). Expected state of external readback signal, generated from the selected test stop mode.
- 34 ... 41: SI test sensor feedback signal (p10046, p10146, p10047, p10147). Expected state of second internal readback signal, generated from the selected test stop mode.
- 42: Internal data for processing the second internal readback signal, generated from the selected test stop mode (p10047, p10147).
- 43: Internal data for processing the internal readback signal, generated from the selected test stop mode (p10047, p10147).
- 44: Internal data for processing the external readback signal, generated from the selected test stop mode (p10047, p10147).
- 45: Internal data for initialization state of test stop mode, dependent upon test stop parameters.
- 46: SI digital inputs debounce time (p10017, p10117).
- 47: Selection F-DI for PROFIsafe (p10050, p10150).
- 48: Screen form of the F-DIs used (p10006, p10022 ... p10031).
- 49: SI SDI positive input terminal (p10030, p10130).
- 50: SI SDI negative input terminal (p10031, p10131).
- 51: SI SLP input terminal (p10032, p10132).

52: SI SLP select input terminal (p10033, p10133).  
53: Internal data for retraction logic (p10009, p100109).  
54: SI F-DI for retraction SLP (p10009, p100109).

**Remedy:**

- check parameterization in the parameters involved and correct if required.
- ensure equality by copying the SI data to the second channel and then carry out an acceptance test.
- check monitoring clock cycle in p9500 and p9300 for equality.

Note:  
This message can be acknowledged via F-DI or PROFIsafe.

**C01714      SI Motion CU: Safely-Limited Speed exceeded**

**Message value:**    %1  
**Drive object:**    VECTOR\_G  
**Reaction:**        NONE  
**Acknowledge:**    IMMEDIATELY (POWER ON)  
**Cause:**           The drive has moved faster than that specified by the velocity limit value (p9531). The drive is stopped as a result of the configured stop response (p9563).  
Message value (r9749, interpret decimal):  
100: SLS1 exceeded.  
200: SLS2 exceeded.  
300: SLS3 exceeded.  
400: SLS4 exceeded.  
1000: Encoder limit frequency exceeded.

**Remedy:**

- check the traversing/motion program in the control.
- check the limits for "Safely-Limited Speed (SLS) and if required, adapt (p9531).

This message can be acknowledged as follows:

- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

Note:  
SI: Safety Integrated  
SLS: Safely-Limited Speed / SG: Safely reduced speed  
See also: p9531 (SI Motion SLS (SG) limit values (Control Unit)), p9563 (SI Motion SLS (SG)-specific stop response (Control Unit))

---

**C01715      SI Motion CU: Safely-Limited Position exceeded**

**Message value:**    %1  
**Drive object:**    VECTOR\_G  
**Reaction:**        NONE  
**Acknowledge:**    IMMEDIATELY (POWER ON)  
**Cause:**           The axis has moved past a parameterized position that is monitored by the "SLP" function.  
Message value (r9749, interpret decimal):  
10: SLP1 violated.  
20: SLP2 violated.

**Remedy:**

- check the traversing/motion program in the control.
- check the limits for "SLP" function and if required, adapt (p9534, p9535).

This message can be acknowledged as follows:

- motion monitoring functions with SINUMERIK: Via the machine control panel

Note:  
SI: Safety Integrated  
SLP: Safely-Limited Position / SE: Safe software limit switches  
See also: p9534 (SI Motion SLP (SE) upper limit values (Control Unit)), p9535 (SI Motion SLP (SE) lower limit values (Control Unit))

<b>C01716</b>	<b>SI Motion CU: Tolerance for safe motion direction exceeded</b>
<b>Message value:</b>	%1

<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>The reference block transferred via PROFIsafe is negative.</p> <p>A reference block is used to generate a referred velocity limit value based on the reference quantity "Velocity limit value SLS1" (p9531[0]).</p> <p>The drive is stopped as a result of the configured stop response (p9563[0]).</p> <p>Message value (r9749, interpret decimal):</p> <p>requested, invalid reference block.</p>
<b>Remedy:</b>	<p>In the PROFIsafe telegram, input data S_SLS_LIMIT_IST must be corrected.</p> <p>This message can be acknowledged as follows:</p> <p>- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe</p> <p>- motion monitoring functions with SINUMERIK: Via the machine control panel</p> <p>Note:</p> <p>SI: Safety Integrated</p> <p>SLS: Safely-Limited Speed / SG: Safely reduced speed</p>
<b>C01745</b>	<b>SI Motion CU: Checking braking torque for the brake test</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	POWER ON (IMMEDIATELY)
<b>Cause:</b>	<p>The scaling of the brake torque for the brake test can be changed using parameter p2003.</p> <p>An acceptance test must be carried out again for the braking test. This determines whether the braking test is still carried out with the correct braking torque.</p>
<b>Remedy:</b>	<p>- carry out a POWER ON (power off/on) for all components.</p> <p>- repeat the acceptance test for the safe brake test if the brake test is used.</p> <p>See also: p2003 (Reference torque)</p>

<b>C01750</b>	<b>SI Motion CU: Hardware fault safety-relevant encoder</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The encoder that is used for the safety-relevant motion monitoring functions signals a hardware fault. Message value (r9749, interpret decimal): Encoder status word 1, encoder status word 2 that resulted in the message.
<b>Remedy:</b>	<ul style="list-style-type: none"><li>- check the encoder connection.</li><li>- replace encoder.</li></ul> <p>This message can be acknowledged as follows:</p> <ul style="list-style-type: none"><li>- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe</li><li>- motion monitoring functions with SINUMERIK: Via the machine control panel.</li></ul> <p>Note regarding encoder replacement for a third-party motor: The serial number of the encoder must be copied in order to acknowledge this safety message. This can be realized using p0440 = 1 or p1990 = 1.</p>
<b>C01751</b>	<b>SI Motion CU: Effectivity test error safety-relevant encoder</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The DRIVE-CLiQ encoder for safe motion monitoring signals an error for the effectivity tests. Message value (r9749, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	<ul style="list-style-type: none"><li>- check the encoder connection.</li><li>- replace encoder.</li></ul> <p>This message can be acknowledged as follows:</p> <ul style="list-style-type: none"><li>- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe</li><li>- motion monitoring functions with SINUMERIK: Via the machine control panel</li></ul>
<b>C01770</b>	<b>SI Motion CU: Discrepancy error of the failsafe inputs or outputs</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The fail-safe digital inputs/digital outputs (F-DI/F-DO) show a different state longer than that parameterized in p10002 / p10102. Fault value (r0949, interpret bitwise binary): yyyyxxxx bin xxxx: Discrepancy error for fail-safe digital inputs (F-DI). Bit 0: Discrepancy error for F-DI 0 Bit 1: Discrepancy error for F-DI 1 ... yyyy: Discrepancy error for fail-safe digital outputs (F-DO). Bit 0: Discrepancy error for F-DO 0 ... Note: If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.
<b>Remedy:</b>	<ul style="list-style-type: none"><li>- check the wiring of the F-DI (contact problems).</li></ul> <p>Note: This message can be acknowledged via F-DI or PROFIsafe. Discrepancy errors of an F-DI can only be completely acknowledged if safe acknowledgement was carried out once the cause of the error was resolved (p10006 or acknowledgment via PROFIsafe). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state internally. For cyclic switching operations at the F-DI, it may be necessary to adapt the discrepancy time to the switching frequency. If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.</p>

$p10002 < (tp / 2) - td$  (discrepancy time must be less than half the period minus the actual discrepancy time)  
 $p10002 \geq p9500$  (discrepancy time must be no less than P9500)  
 $p10002 > td$  (discrepancy time must be greater than the switch discrepancy time which may actually apply)  
 $td$  = possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p9500).  
 $tp$  = period for a switching operation in ms.  
 When debounce p10017 is active, the discrepancy time is directly specified by the debounce time.  
 If the period of a cyclic switching pulse has the order of magnitude of twice the debounce time, then the following formulas should be checked.  
 $p10002 < p10017 + 1 \text{ ms} - td$   
 $p10002 > td$   
 $p10002 \geq p9500$   
 Example:  
 For a 12 ms SI sampling cycle and a switching frequency of 110 ms ( $p10017 = 0$ ), the maximum discrepancy time which can be set is as follows:  
 $p10002 \leq (110/2 \text{ ms}) - 12 \text{ ms} = 43 \text{ ms}$   
 Rounded-off,  $p10002 \leq 36 \text{ ms}$  is obtained (since the discrepancy time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if the result is not an exact multiple of an SI sampling cycle).  
 Note:  
 F-DI: Failsafe Digital Input  
 F-DO: Failsafe Digital Output

<b>A01772</b>	<b>SI Motion CU: Test stop failsafe inputs/outputs active</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The test stop for the fail-safe digital inputs (F-DI) and/or fail-safe digital outputs (F-DO) is presently being performed. Note: F-DI: Failsafe Digital Input F-DO: Failsafe Digital Output
<b>Remedy:</b>	The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.

<b>F01773</b>	<b>SI Motion CU: Test stop error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	A fault has occurred on the CU side during the test stop for the fail-safe outputs. Fault value (r0949, interpret hexadecimal): RRRVWXYZ hex: R: Reserved. V: Actual state of the DO channel concerned (see X) on the CU (corresponds to the states read back from the hardware, bit 0 = DO 0, bit 1 = DO 1, etc.). W: Required state of the DO channel concerned (see X, bit 0 = DO 0, bit 1 = DO 1, etc.). X: DO channels involved, which indicate an error (bit 0 = DO 0, bit 1 = DO 1, etc.). Y: Reason for the test stop fault. Z: State of the test stop in which the fault has occurred. Y: Reason for the test stop fault Y = 1: MM side in incorrect test stop state (internal fault). Y = 2: Expected states of the DOs were not fulfilled (CU305: readback via DI 22 / CU240 readback DI 2). Y = 3: Incorrect timer state on CU side (internal fault) Y = 4: Expected states of the diag DOs were not fulfilled (CU305: internal readback on MM channel). Y = 5: Expected states of the second diag DOs were not fulfilled (CU305: internal readback on CU channel). X and V indicate the DI or Diag-DO state dependent upon the reason for the fault (2, 4 or 5). In the event of multiple test stop faults, the first one that occurred is shown. Z: Test stop state and associated test actions Z = 0 ... 3: Synchronization phase of test stop between CU and Motor Module no switching operations Z = 4: DO + OFF and DO - OFF

Z = 5: Check to see if states are as expected  
Z = 6: DO + ON and DO - ON  
Z = 7: Check to see if states are as expected  
Z = 8: DO + OFF and DO - ON  
Z = 9: Check to see if states are as expected  
Z = 10: DO + ON and DO - OFF  
Z = 11: Check to see if states are as expected  
Z = 12: DO + OFF and DO - OFF  
Z = 13: Check to see if states are as expected  
Z = 14: End of test stop  
Diag expected states in table format:  
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4  
5: 0/-/-1  
7: 0/-/-0  
9: 0/-/-0  
11: 1/-/-1  
13: 0/-/-1  
Second diag expected states in table format:  
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4  
5: -/-/-1  
7: -/-/-0  
9: -/-/-1  
11: -/-/-0  
13: -/-/-1  
DI expected states in table format:  
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4  
5: -/1/1/-  
7: -/0/0/-  
9: -/0/1/-  
11: -/0/1/-  
13: -/1/1/-  
Example:  
Fault F01773 (CU) is signaled with fault value = 0001\_0127 and fault F30773 (MM) is signaled with fault value 0000\_0127.  
This means that in state 7 (Z = 7) the state of the external readback signal was not set correctly (Y = 2) after DO-0 (X = 1) was switched to ON/ON.  
Fault value 0001\_0127 indicates that 0 was expected (W = 0) and 1 (V = 1) was read back from the hardware.  
Fault value 0000\_0127 on the MM indicates that the states were as expected.  
In the case of fault F30773, W and V are always identical; a value of 0 always means that 0 was expected at the readback input but was not present on the other channel (CU).

**Remedy:** Check the wiring of the F-DOs and restart the test stop.  
Note:  
The fault is withdrawn if the test stop is successfully completed.  
In the event of multiple test stop faults, the first one that occurred is shown.  
Once the test stop has been restarted the next queued test stop fault will be signaled (if there is one).

---

**A01774      SI Motion CU: Test stop necessary**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** - after powering up the drive, a test stop has still not been carried out.  
- a new test stop is required after commissioning.  
- the time to carry out the forced checking procedure (test stop) has expired (p10003).  
Note:  
- The test must be performed within a defined, maximum time interval (p10003, maximum of 8760 hours) in order to comply with the requirements as laid down in the standards for timely fault detection and the conditions to calculate the failure rates of safety functions (PFH value). Operation beyond this maximum time period is permissible if it can be ensured that the forced checking procedure is performed before persons enter the hazardous area and who are depending on the safety functions correctly functioning.

**Remedy:** Initiate test stop (BI: p10007).

<b>A01795</b>	<b>SI Motion CU: Wait time after exiting the safe pulse cancellation expired</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	After exiting safe pulse cancellation, within the wait time of 5 seconds, encoderless actual value sensing was not able to be activated for the extended functions without selection. A change is again made into the "safe pulse cancellation" state.
<b>Remedy:</b>	- Check missing enable signals, which prevent the drive control from being commissioned (r0046). - Evaluate possible fault messages of the encoderless actual value sensing and remove.
<b>A01796 (F, N)</b>	<b>SI CU: Wait for communication</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The drive waits for communication to be established to execute the safety-relevant motion monitoring functions. Note: In this state, the pulses are safely suppressed. Alarm value (r2124, interpret decimal): 1: Wait for communication to be established to SINUMERIK. 2: Wait for communication to be established to TM54F. 3: Wait for communication to be established to PROFIsafe F-Host.
<b>Remedy:</b>	If, after a longer period of time, the message is not automatically withdrawn, the following checks have to be made as appropriate: For communication with SINUMERIK, the following applies: - check any other PROFIBUS messages/signals present and remove their cause. - check that assignment of the axes on the higher-level control to the drives in the drive unit is correct. - check enable signal of the safety-relevant motion monitoring functions for the corresponding axis on the higher-level control and if required, set it. For communication with TM54F, the following applies: - check any other messages/signals present for DRIVE-CLiQ communication with the TM54F and remove their cause. - check the setting of p10010. All the drive objects controlled by the TM54F must be listed. For communication with PROFIsafe F-Host, the following applies: - Check any other PROFIsafe communication messages/signals present and evaluate them. - check the operating state of the F-Host. - Check the communication connection to the F Host. - Check the communication connection to the Motor Module. It must be ensured that when the Control Unit powers up, the Motor Module is connected and at the latest is also switched-on with the Control Unit. Otherwise, if the Motor Module is subsequently inserted or switched-on, a power on must be performed at the Control Unit. See also: p9601 (SI enable, functions integrated in the drive (Control Unit)), p9801 (SI enable, functions integrated in the drive (Motor Module)), p10010 (SI drive object assignment)

**F01800 DRIVE-CLiQ: Hardware/configuration error**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** Infeed: NONE (OFF1, OFF2)  
 Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** A DRIVE-CLiQ connection fault has occurred.  
 Fault value (r0949, interpret decimal):  
 100 ... 107:  
 Communication via DRIVE-CLiQ socket X100 ... X107 has not been switched to cyclic operation. The cause may be an incorrect structure or a configuration that results in an impossible bus timing.  
 10:  
 Loss of the DRIVE-CLiQ connection. The cause may be, for example, that the DRIVE-CLiQ cable was withdrawn from the Control Unit or as a result of a short-circuit for motors with DRIVE-CLiQ. This fault can only be acknowledged in cyclic communication.  
 11:  
 Repeated faults when detecting the connection. This fault can only be acknowledged in cyclic communication.  
 12:  
 A connection was detected but the node ID exchange mechanism does not function. The reason is probably that the component is defective. This fault can only be acknowledged in cyclic communication.  
**Remedy:** Re fault value = 100 ... 107:  
 - ensure that the DRIVE-CLiQ components have the same firmware versions.  
 - avoid longer topologies for short current controller clock cycles.  
 For fault value = 10:  
 - check the DRIVE-CLiQ cables at the Control Unit.  
 - remove any short-circuit for motors with DRIVE-CLiQ.  
 - carry out a POWER ON.  
 For fault value = 11:  
 - check the electrical cabinet design and cable routing for EMC compliance  
 For fault value = 12:  
 - replace the component involved.

<b>A01840</b>	<b>SMI: Component found without motor data</b>
<b>Message value:</b>	Component number: %1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	An SMI/DQI without motor data has been found (e.g. SMI installed as replacement part). Alarm value (r2124, interpret decimal): Component number from target topology.
<b>Remedy:</b>	1. Download the SMI/DQI data (motor/encoder data) from the data backup again (p4690, p4691). 2. Carry out a POWER ON (power off/on) for this component. Note: DQI: DRIVE-CLiQ Sensor Integrated SMI: SINAMICS Sensor Module Integrated See also: p4690 (SMI spare part component number), p4691 (SMI spare part save/download data)
<b>A01900 (F)</b>	<b>PB/PN: Configuration telegram error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	A controller attempts to establish a connection using an incorrect configuring telegram. Alarm value (r2124, interpret decimal): 1: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence are defined in p0978. 2: Too many PZD data words for output or input to a drive object. The number of possible PZD items in a drive object is determined by the number of indices in r2050/p2051. 3: Uneven number of bytes for input or output. 4: Setting data for synchronization not accepted. For more information, see A01902. 211: Unknown parameterizing block. 223: Clock synchronization for the PZD interface set in p8815[0] is not permissible. More than one PZD interface is operated in clock synchronism. 253: PN Shared Device: Illegal mixed configuration of PROFIsafe and PZD. 254: PN Shared Device: Illegal double assignment of a slot/subslot. 255: PN: Configured drive object and existing drive object do not match. 500: Illegal PROFIsafe configuration for the interface set in p8815[1]. More than one PZD interface is operated with PROFIsafe. 501: PROFIsafe parameter error (e.g. F_dest). 502: PROFIsafe telegram does not match. 503: PROFIsafe connection is rejected as long as there is no isochronous connection (p8969). Additional values: Only for internal Siemens troubleshooting.
<b>Remedy:</b>	Check the bus configuration on the master and the slave sides. Re alarm value = 1, 2: - Check the list of the drive objects with process data exchange (p0978). Note: With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange.

- Re alarm value = 2:  
 - Check the number of data words for output and input to a drive object.  
 Re alarm value = 211:  
 - Ensure offline version <= online version.  
 Re alarm value = 223, 500:  
 - Check the setting in p8839 and p8815.  
 - Check for inserted but not configured CBE20.  
 - Ensure that only one PZD interface is operated in clock synchronism or with PROFIsafe.  
 Re alarm value = 255:  
 - Check configured drive objects.  
 Re alarm value = 501:  
 - Check the set PROFIsafe address (p9610).  
 Re alarm value = 502:  
 - Check the set PROFIsafe telegram (p60022, p9611).

#### **A01902 PB/PN clock cycle synchronous operation parameterization not permissible**

- Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Parameterization for isochronous operation is not permissible.  
 Alarm value (r2124, interpret decimal):  
 0: Bus cycle time Tdp < 0.5 ms.  
 1: Bus cycle time Tdp > 32 ms.  
 2: Bus cycle time Tdp is not an integer multiple of the current controller clock cycle.  
 3: Instant of the actual value sensing Ti > Bus cycle time Tdp or Ti = 0.  
 4: Instant of the actual value sensing Ti is not an integer multiple of the current controller clock cycle.  
 5: Instant of the setpoint acceptance To >= Bus cycle time Tdp or To = 0.  
 6: Instant of the setpoint acceptance To is not an integer multiple of the current controller clock cycle.  
 7: Master application cycle time Tmapc is not an integer multiple of the speed controller clock cycle.  
 8: Bus reserve bus cycle time Tdp - data exchange time Tdx less than two current controller clock cycles.  
 10: Instant of the setpoint acceptance To <= data exchange time Tdx + current controller clock cycle  
 11: Master application cycle time Tmapc > 14 x Tdp or Tmapc = 0.  
 12: PLL tolerance window Tpll\_w > Tpll\_w\_max.  
 13: Bus cycle time Tdp is not a multiple of all basic clock cycles p0110[x].  
 16: For COMM BOARD, the instant in time for the actual value sensing Ti is less than two current controller clock cycles.  
**Remedy:**  
 - Adapt the bus parameterization Tdp, Ti, To.  
 - adapt the current and speed controller clock cycle.  
 Re alarm value = 10:  
 - Reduce Tdx by using fewer bus participants or shorter telegrams.

Synchronization with the master sign-of-life (STW2.12 ... STW2.15) could not be completed because the sign-of-life is changing differently to how it was configured in the Tmapc time grid.

**Remedy:**

- ensure that the master correctly increments the sign-of-life in the master application clock cycle Tmapc.
- correct the interconnection of the master sign-of-life (p2045).

<b>F01951</b>	<b>CU DRIVE-CLiQ: Synchronization application clock cycle missing</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2 (NONE)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	If DRIVE-CLiQ components with different application clock cycle are operated on a DRIVE-CLiQ port, this requires synchronization with the Control Unit. This synchronization routine was unsuccessful. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- carry out a POWER ON (power off/on) for all components. - upgrade the software of the DRIVE-CLiQ components. - upgrade the Control Unit software. Note: If a Controller Extension is being used (e.g. CX32, NX10), then the following applies: Check whether the Controller Extension is issuing error messages, and if required, remove these.
<b>F01952</b>	<b>CU DRIVE-CLiQ: Synchronization of component not supported</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2 (NONE)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The existing system configuration requires that the connected DRIVE-CLiQ components support the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and the application clock cycle. However, not all DRIVE-CLiQ components have this functionality. Fault value (r0949, interpret decimal): Component number of the first faulty DRIVE-CLiQ component.
<b>Remedy:</b>	Upgrade the firmware of the component specified in the fault value. Note: If required, also upgrade additional components in the DRIVE-CLiQ line.
<b>A01953</b>	<b>CU DRIVE-CLiQ: Synchronization not completed</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	Carry out a POWER ON (power off/on) for all components. If the error occurs after the drive sampling times were changed, and if a Terminal Module 31 (TM31) is being used, the sampling times (p0115, p4099) should be set as integer multiples to the drive clock cycles (p0115).
<b>F01954</b>	<b>CU DRIVE-CLiQ: Synchronization unsuccessful</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	Synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started and was not able to be successfully completed (e.g. after switch-on). Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	1. Remove the cause of a possible DRIVE-CLiQ fault. 2. Initiate a new synchronization, e.g. as follows: - remove the PROFIBUS master and re-insert again. - restart the PROFIBUS master. - switch-off the Control Unit and switch-on again.

- carry out a Control Unit hardware reset (RESET button, p0972).
- carry out a parameter reset and download the saved parameters (p0009 = 30, p0976 = 2, 3).

<b>A01955</b>	<b>CU DRIVE-CLiQ: Synchronization DO not completed</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	Carry out a POWER ON (power off/on) for all components of the DO.
<b>A01980</b>	<b>PN: Interruption cyclic connection</b>

**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The drive object specified for connection is not a SERVO / VECTOR or DC\_CTRL.  
See also: p4815 (Function generator drive number)  
**Remedy:** Use a SERVO / VECTOR / DC\_CTRL drive object with the corresponding number.  
**Note:**  
The alarm is reset as follows:  
- remove the cause of this alarm.  
- restart the function generator.

---

**A02008      Function generator: Drive specified a multiple number of times**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The drive object specified for connection is already specified.  
Alarm value (r2124, interpret decimal):  
Drive object number of the drive object that is specified a multiple number of times.  
**Remedy:** Specify a different drive object.  
**Note:**  
The alarm is reset as follows:  
- remove the cause of this alarm.  
- restart the function generator.

---

**A02009      Function generator: Illegal mode**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The set operating mode (p1300) of the drive object is not permissible when using the function generator.  
Alarm value (r2124, interpret decimal):  
Number of the drive object involved.  
**Remedy:** Change the operating mode for this drive object to p1300 = 20 (encoderless speed control) or p1300 = 21 (speed control with encoder).  
**Note:**  
The alarm is reset as follows:  
- remove the cause of this alarm.  
- restart the function generator.

---

**A02010      Function generator: Speed setpoint from the drive is not zero**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The speed setpoint of a drive selected for connection is greater than the value for the standstill detection set using p1226.

**Remedy:** For all of the drives specified for connection, set the speed setpoints to zero.  
**Note:**  
 The alarm is reset as follows:  
 - remove the cause of this alarm.  
 - restart the function generator.

---

**A02011      Function generator: The actual drive speed is not zero**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The speed actual value of a drive selected for connection is greater than the value for the standstill detection set using p1226.  
**Remedy:** Set the relevant drives to zero speed before starting the function generator.  
**Note:**  
 The alarm is reset as follows:  
 - remove the cause of this alarm.  
 - restart the function generator.

---

**A02015      Function generator: Drive enable signals missing**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The master control and/or enable signals are missing to connect to the specified drive.  
 See also: p4815 (Function generator drive number)  
**Remedy:** Fetch the master control to the specified drive object and set all enable signals.  
**Note:**  
 The alarm is reset as follows:  
 - remove the cause of this alarm.  
 - restart the function generator.

---

**A02016      Function generator: Magnetizing running**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Magnetizing has not yet been completed on a drive object specified for connection.  
 Alarm value (r2124, interpret decimal):  
 Number of the drive object involved.  
 See also: p4815 (Function generator drive number)  
**Remedy:** Wait for magnetizing of the motor (r0056.4).  
**Note:**  
 The alarm is reset as follows:  
 - restart the function generator.  
 See also: r0056 (Status word, closed-loop control)

---

**A02020      Function generator: Parameter cannot be changed**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** This parameter setting cannot be changed when the function generator is active (p4800 = 1).

**Remedy:**

- stop the function generator before parameterizing (p4800 = 0).
- if required, start the function generator (p4800 = 1).

**Note:**  
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4800 (Function generator control)

---

**A02025      Function generator: Period too short**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The value for the period is too short.  
See also: p4821 (Function generator period)

**Remedy:** Check and adapt the value for the period.

**Note:**  
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4821 (Function generator period)

---

**A02026      Function generator: Pulse width too high**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The selected pulse width is too high.  
The pulse width must be less than the period duration.  
See also: p4822 (Function generator pulse width)

**Remedy:** Reduce pulse width.

**Note:**  
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4821 (Function generator period), p4822 (Function generator pulse width)

---

**A02030      Function generator: Physical address equals zero**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The specified physical address is zero.  
See also: p4812 (Function generator physical address)

**Remedy:** Set a physical address with a value other than zero.

**Note:**  
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4812 (Function generator physical address)

---

**A02040      Function generator: Illegal value for offset**

**Message value:** -

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The value for the offset is higher than the value for the upper limit or lower than the value for the lower limit.  
See also: p4826 (Function generator offset)

**Remedy:** Adjust the offset value accordingly.  
**Note:**  
 The alarm is reset as follows:  
 - remove the cause of this alarm.  
 - restart the function generator.  
 See also: p4826 (Function generator offset), p4828 (Function generator lower limit), p4829 (Function generator upper limit)

---

**A02041      Function generator: Illegal value for bandwidth**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The bandwidth referred to the time slice clock cycle of the function generator has either been set too low or too high. Depending on the time slice clock cycle, the bandwidth is defined as follows:  
 $\text{Bandwidth\_max} = 1 / (2 \times \text{time slice clock cycle})$   
 $\text{Bandwidth\_min} = \text{Bandwidth\_max} / 100000$   
**Example:**  
 Assumption: p4830 = 125  $\mu\text{s}$   
 $\rightarrow \text{Bandwidth\_max} = 1 / (2 \times 125 \mu\text{s}) = 4000 \text{ Hz}$   
 $\rightarrow \text{Bandwidth\_min} = 4000 \text{ Hz} / 100000 = 0.04 \text{ Hz}$   
**Note:**  
 p4823: Function generator bandwidth  
 p4830: Function generator time slice clock cycle  
 See also: p4823 (Function generator bandwidth), p4830 (Function generator time slice cycle)  
**Remedy:** Check the value for the bandwidth and adapt accordingly.  
**Note:**  
 The alarm is reset as follows:  
 - remove the cause of this alarm.  
 - restart the function generator.

---

**A02047      Function generator: Time slice clock cycle invalid**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The time slice clock cycle selected does not match any of the existing time slices.  
 See also: p4830 (Function generator time slice cycle)  
**Remedy:** Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.  
**Note:**  
 The alarm is reset as follows:  
 - remove the cause of this alarm.  
 - restart the function generator.  
 See also: r7901 (Sampling times)

---

**A02050      Trace: Start not possible**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The trace has already been started.  
 See also: p4700 (Trace control)  
**Remedy:** Stop the trace and, if necessary, start again.

---

**A02055      Trace: Recording time too short**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The trace duration is too short.  
The minimum is twice the value of the trace clock cycle.  
See also: p4721 (Trace recording time)  
**Remedy:** Check the selected recording time and, if necessary, adjust.

---

**A02056      Trace: Recording cycle too short**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The selected recording cycle is shorter than the selected basic clock cycle 0 (p0110[0]).  
See also: p4720 (Trace recording cycle)  
**Remedy:** Increase the value for the trace cycle.

---

**A02057      Trace: Time slice clock cycle invalid**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The time slice clock cycle selected does not match any of the existing time slices.  
See also: p4723 (Trace time slice cycle)  
**Remedy:** Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.  
See also: r7901 (Sampling times)

---

**A02058      Trace: Time slice clock cycle for endless trace not valid**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The selected time slice clock cycle cannot be used for the endless trace  
See also: p4723 (Trace time slice cycle)  
**Remedy:** Enter the clock cycle of an existing time slice with a cycle time  $\geq 2$  ms for up to 4 recording channels or  $\geq 4$  ms from 5 recording channels per trace.  
The existing time slices can be read out via p7901.  
See also: r7901 (Sampling times)

---

**A02059      Trace: Time slice clock cycle for 2 x 8 recording channels not valid**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The selected time slice clock cycle cannot be used for more than 4 recording channels.  
See also: p4723 (Trace time slice cycle)  
**Remedy:** Enter the clock cycle of an existing time slice with a cycle time  $\geq 4$  ms or reduce the number of recording channels to 4 per trace.  
The existing time slices can be read out via p7901.

**A02075      Trace: Pretrigger time too long**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The selected pretrigger time must be shorter than the trace time.  
See also: p4721 (Trace recording time), p4722 (Trace trigger delay)  
**Remedy:** Check the pretrigger time setting and change if necessary.

---

**F02080      Trace: Parameterization deleted due to unit changeover**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The trace parameterization in the drive unit was deleted due to a unit changeover or a change in the reference parameters.  
**Remedy:** Restart trace.

---

**A02099      Trace: Insufficient Control Unit memory**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The memory space still available on the Control Unit is no longer sufficient for the trace function.  
**Remedy:** Reduce the memory required, e.g. as follows:  
- reduce the trace time.  
- increase the trace clock cycle.  
- reduce the number of signals to be traced.  
See also: r4708 (Trace memory space required), r4799 (Trace memory location free)

---

**A02100      Drive: Computing dead time current controller too short**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The value in p0118 produces a dead time of one clock cycle because it is prior to setpoint availability.  
Possible causes:  
- A parameter backup with a version higher than 4.3 was loaded to a version less than or equal to 4.3.  
- The system properties after replacing a component no longer match the parameter assignment.  
Alarm value (r2134, floating point):  
The minimum value for p0118 where a dead time no longer occurs.  
**Remedy:** - set p0118 to zero.  
- set p0118 to a value greater than or equal to the alarm value (for p1810.11 = 1)  
- set p0117 (from the device) to an automatic setting (p0117 = 1).  
- check the firmware versions of the components involved.  
See also: p0117 (Current controller computing dead time mode), p0118 (Current controller computing dead time)

**F03000          NVRAM fault on action**

**Message value:**    %1  
**Drive object:**     All objects  
**Reaction:**          NONE  
**Acknowledge:**     IMMEDIATELY  
**Cause:**             A fault occurred during execution of action p7770 = 1, 2 for the NVRAM data.  
                          Fault value (r0949, interpret hexadecimal):  
                          yyxx hex: yy = fault cause, xx = application ID  
                          yy = 1:  
                          The action p7770 = 1 is not supported by this version if Drive Control Chart (DCC) is activated for the drive object concerned.  
                          yy = 2:  
                          The data length of the specified application is not the same in the NVRAM and the backup.  
                          yy = 3:  
                          The data checksum in p7774 is not correct.

yy = 4:  
No data available to load.  
See also: p7770 (NVRAM action)  
**Remedy:** Perform the remedy according to the results of the troubleshooting.  
If necessary, start the action again.

---

**F03001      NVRAM checksum incorrect**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** A checksum error occurred when evaluating the non-volatile data (NVRAM) on the Control Unit.  
The NVRAM data affected was deleted.  
**Remedy:** Carry out a POWER ON (power off/on) for all components.

---

**F03500 (A)      TM: Initialization**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** When initializing the Terminal Modules, the terminals of the Control Unit or the Terminal Board 30, an internal software error has occurred.  
Fault value (r0949, interpret decimal):  
yxxx dex  
y = Only for internal Siemens troubleshooting  
xxx = component number (p0151)  
**Remedy:** - power down/power up the power supply for the Control Unit.  
- check the DRIVE-CLiQ connection.  
- if required, replace the Terminal Module.  
The Terminal Module should be directly connected to a DRIVE-CLiQ socket of the Control Unit.  
If the fault occurs again, replace the Terminal Module.

<b>F05060</b>	<b>Parallel circuit: Power unit firmware version does not match</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	Firmware from version V02.30.01.00 is required when connecting the power units in parallel.
<b>Remedy:</b>	Update the firmware of the power units (at least V02.30.01.00).

<b>F05061</b>	<b>Infeed, number of VSM</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The number of active Voltage Sensing Modules (VSM) for the drive object infeed with chassis power units is not correct. For A_Infeed, each active power unit must be assigned an active VSM also for a parallel circuit configuration. For S_Infeed, the active drive object, must be assigned at least one active VSM. Fault value (r0949, interpret decimal): Number of VSMs that are currently assigned to the drive object.
<b>Remedy:</b>	Adapts the number of active Voltage Sensing Modules (VSM).
<b>F05064</b>	<b>Parallel connection: Pulse synchronization error</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (OFF1, OFF3)
<b>Acknowledge:</b>	POWER ON (IMMEDIATELY)
<b>Cause:</b>	The pulse synchronization of at least one of the power units connected in parallel is incorrect.
<b>Remedy:</b>	Restart the drive system.
<b>F06000</b>	<b>Infeed: Precharging monitoring time expired</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF
<b>Reaction:</b>	OFF2 (OFF1)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	After the line contactor closes the power unit does not signal the READY state within the monitoring time (p0857). The end of the DC link pre-charging was not able to be completed for one of the following reasons: 1) There is no line supply voltage connected. 2) The line contactor/line side switch has not been closed. 3) The line supply voltage is too low. 4) Line supply voltage incorrectly set (p0210). 5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit. 6) The pre-charging resistors are overheated as the DC link capacitance is too high. 7) The pre-charging resistors are overheated because when there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link. 8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module. 9) The DC link has either a ground fault or a short-circuit. 10) The pre-charging circuit is possibly defective (only for chassis units). See also: p0210 (Drive unit line supply voltage), p0857 (Power unit monitoring time)
<b>Remedy:</b>	In general: - check the line supply voltage at the connecting terminals. - check the line supply voltage setting (p0210). - check the monitoring time and, if required, increase (p0857). - where relevant, observe additional power unit messages/signals (e.g. F30027). - the following applies to booksize units: Wait (approx. 8 min.) until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from the line supply. Re 5): - carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual). Re 6): - check the total capacitance of the DC link and reduce in accordance with the maximum permissible DC-link capacitance if necessary (refer to the appropriate Equipment Manual) Re 7): - interconnect the ready-for-operation signal from the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link Re 8): - check the connections of the external line contactor. The line contactor must be open during DC-link fast discharge.

Re 9):

- check the DC link for ground faults or short circuits.

<b>F06010</b>	<b>Infeed: Power unit EP 24 V missing in operation</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF
<b>Reaction:</b>	OFF2 (OFF1)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	In operation, the pulse enable via terminal EP at the Line Module (X21.3, X21.4) was withdrawn. Note: EP: Enable Pulses (pulse enable)
<b>Remedy:</b>	- do not open the line side switch in operation - only when the pulses are inhibited. - check the wiring of terminal EP (X21.3, X21.4) at the Line Module to exclude any poor contacts.
<b>F06100</b>	<b>Infeed: Shutdown due to line supply undervoltage condition</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF
<b>Reaction:</b>	OFF2 (OFF1)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The filtered (steady-state) value of the line supply voltage is less than the fault threshold (p0283). Fault condition: $V_{rms} < p0283 * p0210$ Fault value (r0949, floating point): Actual steady-state line supply voltage.
<b>Remedy:</b>	- check the line supply. - check the line supply voltage (p0210). - check the threshold value (p0283).
<b>A06105 (F)</b>	<b>Infeed: Line supply undervoltage</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The filtered (steady-state) value of line supply voltage is lower than the alarm threshold (p0282). Alarm condition: $V_{rms} < p0282 * p0210$ Alarm value (r2124, floating point): Actual steady-state line supply voltage.
<b>Remedy:</b>	- check the line supply. - check the line supply voltage (p0210). - check the alarm threshold (p0282).
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
<b>F06211</b>	<b>Infeed: Summation current impermissibly high</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The smoothed sum of the phase currents ( $i_1 + i_2 + i_3$ ) is impermissibly high. The summed current has exceeded the parameterized threshold for the ground fault monitoring (p0287). Possible causes: - there is a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, reactor, filter or motor! - the current measurement in the power unit is defective. Fault value (r0949, floating point): Smoothed total of the phase currents.
<b>Remedy:</b>	- check the line supply for ground faults and remove any that are present. - check the set threshold for the ground fault monitoring (p0287). - if required, replace the power unit.

---

**A06301 (F)      Infeed: Line supply overvoltage**

**Message value:** Line supply voltage: %1  
**Drive object:** B\_INF  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The filtered (steady-state) value of the rms line supply voltage  $V_{rms}$  is higher than the alarm threshold (p0281).  
Alarm condition:  $V_{rms} > p0281 * p0210$ .  
Alarm value (r2124, floating point):  
Actual steady-state line supply voltage.  
**Remedy:**  
- check the line supply.  
- check the line supply voltage (p0210).  
- check the alarm threshold (p0281).

---

**F06311      Infeed: Supply voltage (p0210) incorrect**

**Message value:** Line supply voltage: %1  
**Drive object:** B\_INF  
**Reaction:** OFF2 (OFF1)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The line voltage nominal value indicated in p0210 is outside the nominal voltage range of the power unit.

After pre-charging was completed, the actual line supply voltage  $V_{rms}$  was calculated using the measured DC link voltage. This voltage  $V_{rms}$  does not lie within the extended tolerance range of the supply voltage set in p0210. The following applies for the extended tolerance range:  $75\% \cdot p0210 < V_{rms} < 120\% \cdot p0210$

Alarm value (r2124, floating point):

Line supply voltage  $V_{rms}$  present.

See also: p0210 (Drive unit line supply voltage)

**Remedy:**

- check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.

See also: p0210 (Drive unit line supply voltage)

---

**F06700 (A) Infeed: Switch line contactor for load condition**

**Message value:** -

**Drive object:** B\_INF

**Reaction:** NONE (OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:** For an ON command, the infeed line contactor should be switched under load.

**Remedy:**

- do not load the DC link if the infeed has not issued an operating signal ( $r0863.0 = 1$ ).
- after the infeed has been powered down, all power units connected to the DC link should be powered down. To realize this, the operating signal of the infeed ( $r0863.0$ ) must be suitably interconnected.

Reaction upon A: NONE

Acknowl. upon A: NONE

---

**A06810 (F) Infeed: DC link voltage alarm threshold**

**Message value:** -

**Drive object:** B\_INF

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** In operation, the DC link voltage has dropped to below the alarm threshold. The alarm threshold is obtained from the sum of p0279 and r0296.

Possible causes include:

- line supply voltage dip or another line supply fault.
- overload of the infeed.
- for Active Line Module: Controller incorrectly parameterized.

See also: p0279 (DC link voltage offset alarm threshold), r0296 (DC link voltage undervoltage threshold)

**Remedy:**

- check the line voltage and line supply quality.
- reduce the power drawn, avoid step-like load changes
- for Active Line Module: Adapt the controller parameterization (e.g. automatic line supply identification ( $p3410 = 4, 5$ )).

Reaction upon F: NONE (OFF1, OFF2)

Fault value (r0949, interpret decimal):

11: Phase U

12: Phase V

13: Phase W

See also: p3235 (Phase failure signal motor monitoring time)

**Remedy:**

Check the feeder cables to the braking resistors.

See also: p1360 (Braking chopper braking resistor cold), p1362 (Braking chopper activation threshold), r1363 (Braking chopper output voltage), p1364 (Braking chopper resistor asymmetry)

**F07011**

**Drive: Motor overtemperature**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)

**Acknowledge:** IMMEDIATELY

**Cause:** KTY or no sensor:

The measured motor temperature or model temperature has exceeded the fault threshold (p0605) or the timer (p0606) has elapsed following the alarm threshold (p0604) being exceeded.

The response parameterized in p0610 becomes active.

PTC or bimetallic NC contact:

The response threshold of 1650 Ohm was exceeded or the NC contact opened and the timer (p0606) has expired.

The response parameterized in p0610 becomes active.

Possible causes:

- Motor is overloaded

- motor ambient temperature too high.

- PTC / bimetallic NC contact: Wire breakage or sensor not connected.

Fault value (r0949, interpret decimal):

200: The motor temperature model 1 (I2t) signals an overtemperature (p0612.0 = 1, p0611 > 0).

Number of the temperature channel leading to the message (for SME/TM120 (p0601 = 10, 11)).

See also: p0604, p0605, p0606, p0612, p0625, p0626, p0627, p0628

**Remedy:**

- Reduce the motor load.

- check the ambient temperature and the motor ventilation.

- check the wiring and the connection of the PTC or bimetallic NC contact.

See also: p0604, p0605, p0606, p0612, p0625, p0626, p0627, p0628

**A07015**

**Drive: Motor temperature sensor alarm**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** An error was detected when evaluating the temperature sensor set in p0600 and p0601.

With the fault, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 50 ms after alarm A07015.

Possible causes:

- wire breakage or sensor not connected (KTY: R > 1630 Ohm).
- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).

Alarm value (r2124, interpret decimal):

- if SME/TM120 is selected (p0601 = 10, 11),  
this is the number of the temperature channel leading to the message.

**Remedy:**

- make sure that the sensor is connected correctly.
  - check the parameterization (p0600, p0601).
- See also: r0035, p0600 (Motor temperature sensor for monitoring), p0601, p0607 (Temperature sensor fault timer)

---

**F07016 Drive: Motor temperature sensor fault**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** IMMEDIATELY

**Cause:** An error was detected when evaluating the temperature sensor set in p0600 and p0601.

Possible causes:

- wire breakage or sensor not connected (KTY: R > 1630 Ohm).
- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).

Note:

If alarm A07015 is present, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 50 ms after alarm A07015.

Fault value (r0949, interpret decimal):

- if SME/TM120 is selected (p0601 = 10, 11),  
this is the number of the temperature channel leading to the message.

See also: p0607 (Temperature sensor fault timer)

**Remedy:**

- make sure that the sensor is connected correctly.
  - check the parameterization (p0600, p0601).
  - induction motors: De-activate temperature sensor fault (p0607 = 0).
- See also: r0035, p0600 (Motor temperature sensor for monitoring), p0601, p0607 (Temperature sensor fault timer)

24: Data type of a TAG is incorrect (e.g. Index, number or bit is not U16).  
Fault causes for the parameters to be set:  
25: Error level has an undefined value.  
26: Mode has an undefined value.  
27: A value was entered as string in the tag value that is not "DEFAULT".  
31: Entered drive object type unknown.  
32: A device was not able to be found for the determined drive object number.  
34: A trigger parameter was recursively called.  
35: It is not permissible to write to the parameter via macro.  
36: Check, writing to a parameter unsuccessful, parameter can only be read, not available, incorrect data type, value range or assignment incorrect.  
37: Source parameter for a BICO interconnection was not able to be determined.  
38: An index was set for a non-indexed (or CDS-dependent) parameter.  
39: No index was set for an indexed parameter.  
41: A bit operation is only permissible for parameters with the parameter format DISPLAY\_BIN.  
42: A value not equal to 0 or 1 was set for a BitOperation.  
43: Reading the parameter to be changed by the BitOperation was unsuccessful.  
51: Factory setting for DEVICE may only be executed on the DEVICE.  
61: The setting of a value was unsuccessful.

**Remedy:** - check the parameter involved.  
- check the macro file and BICO interconnection.

**F07083      Macro: ACX file not found**

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The ACX file (macro) to be executed was not able to be found in the appropriate directory.  
Fault value (r0949, interpret decimal):  
Parameter number with which the execution was started.  
See also: p0015, p0700, p1000 (Macro Connector Inputs (CI) for speed setpoints), p1500 (Macro Connector Inputs (CI) for torque setpoints)  
**Remedy:** - check whether the file is saved in the appropriate directory on the memory card.  
Example:  
If p0015 is set to 1501, then the selected ACX file must be located in the following directory:  
... /PMACROS/DEVICE/P15/PM001501.ACX

---

**F07084      Macro: Condition for WaitUntil not fulfilled**

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The WaitUntil condition set in the macro was not fulfilled in a certain number of attempts.  
Fault value (r0949, interpret decimal):  
Parameter number for which the condition was set.  
**Remedy:** Check and correct the conditions for the WaitUntil loop.

<b>F07085</b>	<b>Drive: Open-loop/closed-loop control parameters changed</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>Open-loop/closed-loop control parameters have had to be changed for the following reasons:</p> <ol style="list-style-type: none"> <li>1. As a result of other parameters, they have exceeded the dynamic limits.</li> <li>2. They cannot be used due to the fact that the hardware detected not having certain features.</li> </ol> <p>Fault value (r0949, interpret decimal):</p> <p>Changed parameter number.</p> <p>340:</p> <p>The motor and control parameters were automatically calculated (p0340 = 1), because the vector control was subsequently activated as configuration (r0108.2).</p> <p>See also: p0640 (Current limit), p1082 (Maximum speed), p1300 (Open-loop/closed-loop control operating mode), p1800 (Pulse frequency setpoint)</p>
<b>Remedy:</b>	<p>Not necessary.</p> <p>It is not necessary to change the parameters as they have already been correctly limited.</p>
<b>F07086</b>	<b>Units changeover: Parameter limit violation due to reference value change</b>

<b>Remedy:</b>	<p>Check the adapted parameter values and if required correct.</p> <p>See also: r9451 (Units changeover adapted parameters)</p>

---

<b>A07089</b>	<b>Changing over units: Function module activation is blocked because the units have been changed over</b>
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	An attempt was made to activate a function module. This is not permissible if the units have already been changed over. See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units)
Remedy:	Restore units that have been changed over to the factory setting.

---

<b>F07100</b>	<b>Drive: Sampling times cannot be reset</b>
Message value:	Parameter: %1
Drive object:	B_INF, VECTOR_G
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When resetting drive parameter (p0976) sampling times cannot be reset using p0111, p0112, p0115. Fault value (r0949, interpret decimal): Parameter whose setting prevents the sampling times being reset. See also: r0110 (Basic sampling times)
Remedy:	- continue to work with the set sampling times. - before resetting the drive parameters, set the basic clock cycle p0110[0] to the original value. See also: r0110 (Basic sampling times)

---

<b>F07110</b>	<b>Drive: Sampling times and basic clock cycle do not match</b>
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The parameterized sampling times do not match the basic clock cycle. Fault value (r0949, interpret decimal): The fault value specifies the parameter involved. See also: r0110, r0111, p0115
Remedy:	Enter the current controller sampling times so that they are identical to the basic clock cycle, e.g. by selecting p0112. Note which basic clock cycle is selected in p0111. The sampling times in p0115 can only be changed manually in the sampling times pre-setting "Expert" (p0112). See also: r0110, r0111, p0112, p0115

---

<b>A07200</b>	<b>Drive: Master control ON command present</b>
Message value:	-
Drive object:	B_INF, ENC, VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	The ON/OFF1 command is present (no 0 signal). The command is either influenced via binector input p0840 (current CDS) or control word bit 0 via the master control.
Remedy:	Switch the signal via binector input p0840 (current CDS) or control word bit 0 via the master control to 0.

---

<b>F07220 (N, A)</b>	<b>Drive: Master control by PLC missing</b>

<b>F07311</b>	<b>Bypass motor switch</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>Fault value (r0949, interpret bitwise binary):</p> <p>Bit 1: Switch "Closed" feedback signal missing.</p> <p>Bit 2: Switch "Open" feedback signal missing.</p> <p>Bit 3: Switch feedback signal too slow.</p> <p>After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.</p> <p>Bit 6: Drive switch feedback signal not consistent with the bypass state.</p> <p>The drive switch is closed when switching-on or when switching-in the motor.</p> <p>See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)</p>
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- check the transfer of the feedback signals.</li> <li>- check the switch.</li> </ul>

<b>F07312</b>	<b>Bypass LSS:</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>Fault value (r0949, interpret bitwise binary):</p> <p>Bit 1: Switch "Closed" feedback signal missing.</p> <p>Bit 2: Switch "Open" feedback signal missing.</p>

Bit 3: Switch feedback signal too slow.

After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.

Bit 6: Line Side Switch feedback signal not consistent with the bypass state.

When switching-on or when switching-in the motor, the line side switch is closed without this having been requested from the bypass.

See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

**Remedy:**

- check the transfer of the feedback signals.
- check the switch.

---

**F07320 Drive: Automatic restart interrupted**

**Message value:** %1

**Drive object:** B\_INF

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:**

- The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt.
- there is no active ON command.
- the monitoring time for the power unit has expired (p0857).
- when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again.

Fault value (r0949, interpret hexadecimal):  
Only for internal Siemens troubleshooting.

**Remedy:**

- increase the number of restart attempts (p1211). The actual number of starting attempts is displayed in r1214.
- increase the delay time in p1212 and/or the monitoring time in p1213.
- issue an ON command (p0840).
- either increase or disable the monitoring time of the power unit (p0857).

---

**F07320 Drive: Automatic restart interrupted**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:**

- The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt.
- there is no active ON command.
- the monitoring time for the power unit has expired (p0857).
- when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again.

Fault value (r0949, interpret hexadecimal):  
Only for internal Siemens troubleshooting.

**Remedy:**

- increase the number of restart attempts (p1211). The actual number of starting attempts is displayed in r1214.
- increase the delay time in p1212 and/or the monitoring time in p1213.
- issue an ON command (p0840).
- either increase or disable the monitoring time of the power unit (p0857).
- Reduce the delay time for resetting the start counter p1213[1] so that fewer faults are registered in the time interval.

---

**A07321 Drive: Automatic restart active**

**Message value:** -

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The automatic restart (AR) is active. When the line supply returns and/or the causes of the existing faults are removed the drive is automatically restarted. The pulses are enabled and the motor starts to rotate.

**Remedy:**

- the automatic restart (AR) should, if required, be inhibited (p1210 = 0).
- an automatic restart can be directly interrupted by withdrawing the power-on command (BI: p0840).

---

**F07330 Flying restart: Measured search current too low**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** OFF2 (NONE, OFF1)

**Acknowledge:** IMMEDIATELY

**Cause:** During a flying restart, it was identified that the search current reached is too low.  
It is possible that the motor is not connected.

**Remedy:** Check the motor feeder cables.

---

**F07331 Flying restart: Function not supported**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** OFF2 (NONE, OFF1)

**Acknowledge:** IMMEDIATELY

**Cause:** It is not possible to power up with the motor rotating (no flying restart). In the following cases, the "flying restart" function is not supported:  
Permanent-magnet and separately-excited synchronous motors (PEM, FEM): Operation with U/f characteristic.  
Permanent-magnet synchronous motor (PEM): Encoderless operation without a Voltage Sensing Module (VSM) being connected.

**Remedy:**

- de-activate the "flying restart" function (p1200 = 0).
- change the open-loop/closed-loop control mode (p1300).
- connect a Voltage Sensing Module (VSM) (voltage measurement).

---

**A07350 (F) Drive: Measuring probe parameterized to a digital output**

**Message value:** %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The measuring probe is connected to a bi-directional digital input/output and the terminal is set as output.  
Alarm value (r2124, interpret decimal):  
8: DI/DO 8 (X122.9/X132.1)  
9: DI/DO 9 (X122.10/X132.2)  
10: DI/DO 10 (X122.12/X132.3)  
11: DI/DO 11 (X122.13/X132.4)  
12: DI/DO 12 (X132.9)  
13: DI/DO 13 (X132.10)  
14: DI/DO 14 (X132.12)  
15: DI/DO 15 (X132.13)  
To the terminal designation:  
The first designation is valid for CU320, the second for CU305.

**Remedy:**

- set the terminal as input (p0728).
- de-select the measuring probe (p0488, p0489, p0580).

Reaction upon F: OFF1

Acknowled. upon F: IMMEDIATELY

---

**A07400 (N) Drive: DC link voltage maximum controller active**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The DC link voltage controller has been activated because the upper switch-in threshold has been exceeded (r1242, r1282).  
The ramp-down times are automatically increased in order to maintain the DC link voltage (r0070) within the permissible limits. There is a system deviation between the setpoint and actual speeds.

When the DC link voltage controller is switched out (disabled), this is the reason that the ramp-function generator output is set to the speed actual value.  
See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration), p1280 (Vdc controller or Vdc monitoring configuration (U/f))

**Remedy:**  
If the controller is not to intervene:  
- increase the ramp-down times.  
- switch-off the Vdc\_max controller (p1240 = 0 for vector control, p1280 = 0 for U/f control).  
If the ramp-down times are not to be changed:  
- use a chopper or regenerative feedback unit.

Reaction upon N: NONE  
Acknowl. upon N: NONE

---

**A07401 (N)      Drive: DC link voltage maximum controller de-activated**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The Vdc\_max controller can no longer maintain the DC link voltage (r0070) below the limit value (r1242, r1282) and was therefore switched out (disabled).  
- the line supply voltage is permanently higher than specified for the power unit.  
- the motor is permanently in the regenerative mode as a result of a load that is driving the motor.

**Remedy:**  
- check whether the input voltage is within the permissible range.  
- check whether the load duty cycle and load limits are within the permissible limits.

Reaction upon N: NONE  
Acknowl. upon N: NONE

---

**A07402 (N)      Drive: DC link voltage minimum controller active**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The DC link voltage controller has been activated as the lower switch-in threshold has been undershot (r1246, r1286).  
The kinetic energy of the motor is used to buffer the DC link. The drive is therefore braked.  
See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration), p1280 (Vdc controller or Vdc monitoring configuration (U/f))

**Remedy:** The alarm disappears when power supply returns.

Reaction upon N: NONE  
Acknowl. upon N: NONE

---

**F07403 (N, A)      Drive: Lower DC link voltage threshold reached**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The DC link voltage monitoring is active (p1240 , p1280 = 5, 6) and the lower DC link voltage threshold (r1246, r1286) was reached in the "Operation" state.

**Remedy:**  
- check the line supply voltage.  
- check the infeed.  
- adapt the device supply voltage (p0210) or the switch-on level (p1245, p1285).  
- disable the DC link voltage monitoring (p1240, p1280 = 0).

<b>F07412</b>	<b>Drive: Commutation angle incorrect (motor model)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	ENCODER (NONE, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An incorrect commutation angle was detected that can result in a positive coupling in the speed controller. Possible causes: <ul style="list-style-type: none"><li>- The phase sequence of the output phases for the motor is incorrect (e.g. the phases are interchanged).</li><li>- the motor encoder is incorrectly adjusted with respect to the magnet position.</li><li>- the motor encoder is damaged.</li><li>- the angular commutation offset is incorrectly set (p0431).</li><li>- data to calculate the motor model has been incorrectly set (p0356 (motor-stator leakage inductance) and/or p0350 (motor-stator resistance) and/or p0352 (cable resistance)).</li><li>- the changeover speed for the motor model is too low (p1752). The monitoring function only becomes effective above the changeover speed.</li><li>- pole position identification might have calculated an incorrect value when activated (p1982 = 1).</li><li>- the motor encoder speed signal is faulted.</li><li>- the control loop is instable due to incorrect parameterization.</li></ul> Fault value (r0949, interpret decimal): SERVO: 0: The comparison of the pole position angle from the encoder and motor model resulted in an excessively high value (> 80 ° electrical). 1: - VECTOR: 0: The comparison of the pole position angle from the encoder and motor model resulted in an excessively high value (> 45 ° electrical). 1: The change in the speed signal from the motor encoder has changed by > p0492 within a current controller clock cycle.
<b>Remedy:</b>	<ul style="list-style-type: none"><li>- Check the phase sequence for the motor, and if required, correct (wiring, p1820).</li><li>- if the encoder mounting was changed - re-adjust the encoder.</li><li>- replace the defective motor encoder.</li></ul>

---

- correctly set the angular commutation offset (p0431). If required, determine using p1990.
  - correctly set the motor stator resistance, cable resistance and motor-stator leakage inductance (p0350, p0352, p0356).
- Calculate the cable resistance from the cross-section and length, check the inductance and stator resistance using the motor data sheet, measure the stator resistance, e.g. using a multimeter - and if required, again identify the values using the stationary motor data identification (p1910).
- increase the changeover speed for the motor model (p1752). The monitoring is completely de-activated for p1752 > p1082 (maximum speed).
  - with pole position identification activated (p1982 = 1) check the procedure for pole position identification (p1980) and force a new pole position identification procedure by means of de-selection followed by selection (p1982 = 0 -> 1).
- Note:  
For High Dynamic Motors (1FK7xxx-7xxx), for applications with a higher current, if necessary, the monitoring should be disabled.

<b>F07413</b>	<b>Drive: Commutation angle incorrect (pole position identification)</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	ENCODER (NONE, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An incorrect commutation angle was detected that can result in a positive coupling in the speed controller. Within the pole position identification routine (p1982 = 2): - a difference of > 45 ° electrical to the encoder angle was determined. For VECTOR, within the encoder adjustment (p1990 = 2): - a difference of > 6 ° electrical to the encoder angle was determined.
<b>Remedy:</b>	- correctly set the angular commutation offset (p0431). - re-adjust the motor encoder after the encoder has been replaced. - replace the defective motor encoder. - check the pole position identification routine. If the pole position identification routine is not suitable for this motor type, then disable the plausibility check (p1982 = 0).

<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>When the position tracking of the load gear is configured, the drive/encoder (motor encoder) identifies a maximum possible absolute position actual value (r2723) that can no longer be represented within 32 bits.  Maximum value: <math>p0408 * p2721 * 2^{p0419}</math></p>

Fault value (r0949, interpret hexadecimal):

ccbbaa hex

aa = encoder data set

bb = component number

cc = drive data set

See also: p0408 (Rotary encoder pulse No.), p0419 (Fine resolution absolute value Gx\_XIST2 (in bits)), p2721 (Load gear, rotary absolute encoder, revolutions, virtual)

**Remedy:**

- reduce the fine resolution (p0419).

- reduce the multiturn resolution (p2721).

See also: p0419 (Fine resolution absolute value Gx\_XIST2 (in bits)), p2721 (Load gear, rotary absolute encoder, revolutions, virtual)

---

**F07448 (A) Load gear: Position tracking, linear axis has exceeded the maximum range**

**Message value:**

-

**Drive object:**

B\_INF, ENC, VECTOR\_G

**Reaction:**

Infeed: NONE

Vector: OFF1 (NONE, OFF2, OFF3)

**Acknowledge:**

IMMEDIATELY

**Cause:**

For a configured linear axis/no modulo axis, the currently effective motor encoder (encoder 1) has exceeded the maximum possible traversing range.

For the configured linear axis, the maximum traversing range is defined to be 64x (+/- 32x) of p0421. It should be read in p2721 and interpreted as the number of load revolutions.

Note:

Only the motor encoder in the currently effective drive data set is monitored here. The actual effective drive data set is displayed in x = r0051 and the corresponding motor encoder is specified in in p0187[x].

**Remedy:**

The fault should be resolved as follows:

- select encoder commissioning (p0010 = 4).

- reset position tracking, position (p2720.2 = 1).

- de-select encoder commissioning (p0010 = 0).

The fault should then be acknowledged and the absolute encoder adjusted.

**Message value:**

%1

**Drive object:**

B\_INF, ENC, VECTOR\_G

**Reaction:**

Infeed: NONE

Vector: OFF1 (NONE, OFF2, OFF3)

**Acknowledge:**

IMMEDIATELY

**Cause:**

When powered down, the currently effective motor encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder.

Note:

Only the motor encoder in the currently effective drive data set is monitored here. The actual effective drive data set is displayed in x = r0051 and the corresponding motor encoder is specified in in p0187[x].

Fault value (r0949, interpret decimal):

Deviation (difference) to the last encoder position in increments of the absolute value after the measuring gear - if one is being used. The sign designates the traversing direction.

Note:

The deviation (difference) found is also displayed in r2724.

See also: p2722 (Load gear, position tracking tolerance window), r2724 (Load gear position difference)

**Remedy:**

Reset the position tracking as follows:

- select encoder commissioning (p0010 = 4).

- reset position tracking, position (p2720.2 = 1).

- de-select encoder commissioning (p0010 = 0).

The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).

---

**A07455 EPOS: Maximum velocity limited**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The maximum velocity (p2571) is too high to correctly calculate the modulo correction.  
Within the sampling time for positioning (p0115[5]), with the maximum velocity, a maximum of the half modulo length must be moved through. p2571 was limited to this value.

**Remedy:**

- reduce the maximum velocity (p2571).
- increase the sampling time for positioning (p0115[5]).

---

**A07456 EPOS: Setpoint velocity limited**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The actual setpoint velocity is greater than the parameterized maximum velocity (p2571) and is therefore limited.

**Remedy:**

- check the entered setpoint velocity.
- reduce the velocity override (CI: p2646).
- increase the maximum velocity (p2571).
- check the signal source for the externally limited velocity (CI: p2594).

---

**A07457 EPOS: Combination of input signals illegal**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** An illegal combination of input signals that are simultaneously set was identified.  
Alarm value (r2124, interpret decimal):

- 0: Jog 1 and jog 2 (p2589, p2590).
- 1: Jog 1 or jog 2 and direct setpoint input/MDI (p2589, p2590, p2647).
- 2: Jog 1 or jog 2 and start referencing (p2589, p2590, p2595).
- 3: Jog 1 or jog 2 and activate traversing task (p2589, p2590, p2631).
- 4: Direct setpoint input/MDI and starting referencing (p2647, p2595).
- 5: Direct setpoint input/MDI and activate traversing task (p2647, p2631).
- 6: Start referencing and activate traversing task (p2595, p2631).

**Remedy:** Check the appropriate input signals and correct.

<b>F07458</b>	<b>EPOS: Reference cam not found</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	After starting the search for reference, the axis moved through the maximum permissible distance to search for the reference cam without actually finding the reference cam.
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- check the "reference cam" binector input (BI: p2612).</li> <li>- check the maximum permissible distance to the reference cam (p2606).</li> <li>- if axis does not have any reference cam, then set p2607 to 0.</li> </ul>
<b>F07459</b>	<b>EPOS: No zero mark</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	After leaving the reference cam, the axis has traversed the maximum permissible distance between the reference cam and zero mark without finding the zero mark.
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- check the encoder regarding the zero mark</li> <li>- check the maximum permissible distance between the reference cam and zero mark (p2609).</li> <li>- use an external encoder zero mark (equivalent zero mark) (p0495).</li> </ul> <p>See also: p0495 (Equivalent zero mark, input terminal)</p>
<b>F07460</b>	<b>EPOS: End of reference cam not found</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	During the search for reference, when the axis reached the zero mark it also reached the end of the traversing range without detecting an edge at the binector input "reference cam" (BI: p2612). Maximum traversing range: -2147483648 [LU] ... -2147483647 [LU]
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- check the "reference cam" binector input (BI: p2612).</li> <li>- repeat the search for reference.</li> </ul>
<b>A07461</b>	<b>EPOS: Reference point not set</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	When starting a traversing block/direct setpoint input, a reference point is not set (r2684.11 = 0).
<b>Remedy:</b>	Reference the system (search for reference, flying referencing, set reference point).
<b>A07462</b>	<b>EPOS: Selected traversing block number does not exist</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	<p>A traversing block selected via BI: p2625 to BI: p2630 was started via BI: p2631 = 0/1 edge "Activate traversing task".</p> <ul style="list-style-type: none"> <li>- the number of the started traversing block is not contained in p2616[0...n].</li> <li>- the started traversing block is suppressed.</li> </ul> <p>Alarm value (r2124, interpret decimal): Number of the selected traversing block that is also not available.</p>
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- correct the traversing program.</li> <li>- select an available traversing block number.</li> </ul>

---

<b>A07463 (F)</b>	<b>EPOS: External block change not requested in the traversing block</b>
Message value:	%1
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	For a traversing block with the block change enable CONTINUE_EXTERNAL_ALARM, the external block change was not requested. Alarm value (r2124, interpret decimal): Number of the traversing block.
Remedy:	Resolve the reason as to why the edge is missing at binector input (BI: p2632).
Reaction upon F:	OFF1
Acknowled. upon F:	IMMEDIATELY

---

<b>F07464</b>	<b>EPOS: Traversing block is inconsistent</b>
Message value:	%1
Drive object:	VECTOR_G
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The traversing block does not contain valid information. Alarm value (r2124, interpret decimal): Number of the traversing block with invalid information.
Remedy:	Check the traversing block and where relevant, take into consideration alarms that are present.

---

<b>A07465</b>	<b>EPOS: Traversing block does not have a subsequent block</b>
Message value:	%1
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	There is no subsequent block in the traversing block. Alarm value (r2124, interpret decimal): Number of the traversing block with the missing subsequent block.
Remedy:	- parameterize this traversing block with the block change enable END. - parameterize additional traversing blocks with a higher block number and for the last block, using the block change enable END.

---

<b>A07466</b>	<b>EPOS: Traversing block number assigned a multiple number of times</b>
Message value:	%1
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	The same traversing block number was assigned a multiple number of times. Alarm value (r2124, interpret decimal): Number of the traversing block that was assigned a multiple number of times.
Remedy:	Correct the traversing blocks.

---

<b>A07467</b>	<b>EPOS: Traversing block has illegal task parameters</b>
Message value:	%1
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	The task parameter in the traversing block contains an illegal value. Alarm value (r2124, interpret decimal): Number of the traversing block with an illegal task parameter.
Remedy:	Correct the task parameter in the traversing block.

---

<b>A07468</b>	<b>EPOS: Traversing block jump destination does not exist</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	In a traversing block, a jump was programmed to a non-existent block. Alarm value (r2124, interpret decimal): Number of the traversing block with a jump destination that does not exist.
<b>Remedy:</b>	- correct the traversing block. - add the missing traversing block.
<b>A07469</b>	<b>EPOS: Traversing block &lt; target position &lt; software limit switch minus</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	In the traversing block the specified absolute target position lies outside the range limited by the software limit switch minus. Alarm value (r2124, interpret decimal): Number of the traversing block with illegal target position.
<b>Remedy:</b>	- correct the traversing block. - change software limit switch minus (CI: p2578, p2580).
<b>A07470</b>	<b>EPOS: Traversing block &gt; target position &gt; software limit switch plus</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	In the traversing block the specified absolute target position lies outside the range limited by the software limit switch plus. Alarm value (r2124, interpret decimal): Number of the traversing block with illegal target position.
<b>Remedy:</b>	- correct the traversing block. - change software limit switch plus (CI: p2579, p2581).
<b>A07471</b>	<b>EPOS: Traversing block target position outside the modulo range</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	In the traversing block the target position lies outside the modulo range. Alarm value (r2124, interpret decimal): Number of the traversing block with illegal target position.
<b>Remedy:</b>	- in the traversing block, correct the target position. - change the modulo range (p2576).
<b>A07472</b>	<b>EPOS: Traversing block ABS_POS/ABS_NEG not possible</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	In the traversing block the positioning mode ABS_POS or ABS_NEG were parameterized with the modulo correction not activated. Alarm value (r2124, interpret decimal): Number of the traversing block with the illegal positioning mode.
<b>Remedy:</b>	Correct the traversing block.

<b>A07483</b>	<b>EPOS: Travel to fixed stop clamping torque not reached</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	The fixed stop in the traversing block was reached without the clamping torque/clamping force having been achieved.
Remedy:	<ul style="list-style-type: none"><li>- Check the maximum torque-generating current (r1533).</li><li>- check the torque limits (p1520, p1521).</li><li>- check the power limits (p1530, p1531).</li><li>- check the BICO interconnections of the torque limits (p1522, p1523, p1528, p1529).</li></ul>

---

<b>F07484</b>	<b>EPOS: Fixed stop outside the monitoring window</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	OFF3 (OFF1, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	In the "fixed stop reached" state, the axis has moved outside the defined monitoring window (p2635).
Remedy:	<ul style="list-style-type: none"><li>- check the monitoring window (p2635).</li><li>- check the mechanical system.</li></ul>

---

<b>F07485 (A)</b>	<b>EPOS: Fixed stop not reached</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	In a traversing block with the task FIXED STOP, the end position was reached without detecting a fixed stop.
Remedy:	<ul style="list-style-type: none"><li>- check the traversing block and locate the target position further into the workpiece.</li><li>- check the "fixed stop reached" control signal (p2637).</li><li>- if required, reduce the maximum following error window to detect the fixed stop (p2634).</li></ul>
Reaction upon A:	NONE
Acknowl. upon A:	NONE

---

<b>A07486</b>	<b>EPOS: Intermediate stop missing</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the modes "traversing blocks" or "direct setpoint input/MDI" at the start of motion, the binector input "no intermediate stop/intermediate stop" (BI: p2640) did not have a 1 signal.
Remedy:	Connect a 1 signal to the binector input "no intermediate stop/intermediate stop" (BI: p2640) and re-start motion.

---

<b>A07487</b>	<b>EPOS: Reject traversing task missing</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the modes "traversing blocks" or "direct setpoint input/MDI" at the start of motion, the binector input "do not reject traversing task/reject traversing task" (BI: p2641) does not have a 1 signal.
Remedy:	Connect a 1 signal to the binector input "do not reject traversing task/reject traversing task" (BI: p2641) and restart motion.

---

<b>F07488</b>	<b>EPOS: Relative positioning not possible</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	In the mode "direct setpoint input/MDI", for continuous transfer (p2649 = 1) relative positioning was selected (BI: p2648 = 0 signal).
Remedy:	Check the control.
<b>A07489</b>	<b>EPOS: Reference point correction outside the window</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	For the function "flying referencing" the difference between the measured position at the measuring probe and the reference point coordinate lies outside the parameterized window.
Remedy:	- check the mechanical system. - check the parameterization of the window (p2602).
<b>F07490</b>	<b>EPOS: Enable signal withdrawn while traversing</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	- for a standard assignment, another fault may have occurred as a result of withdrawing the enable signals. - the drive is in the "switching on inhibited" state (for a standard assignment).
Remedy:	- set the enable signals or check the cause of the fault that first occurred and then result (for a standard assignment). - check the assignment to enable the basic positioning function.
<b>F07491 (A)</b>	<b>EPOS: STOP cam minus reached</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	OFF3
Acknowledge:	IMMEDIATELY
Cause:	A 0 signal was detected at binector input BI: p2569, i.e. the STOP cam minus was reached. For a positive traversing direction, the STOP cam minus was reached - i.e. the wiring of the STOP cam is incorrect.
Remedy:	- leave the STOP cam minus in the positive traversing direction and return the axis to the valid traversing range. - check the wiring of the STOP cam.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
<b>F07492 (A)</b>	<b>EPOS: STOP cam plus reached</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	OFF3
Acknowledge:	IMMEDIATELY
Cause:	A 0 signal was detected at binector input BI: p2570, i.e. the STOP cam plus was reached. For a negative traversing direction, the STOP cam plus was reached - i.e. the wiring of the STOP cam is incorrect.
Remedy:	- leave the STOP cam plus in the negative traversing direction and return the axis to the valid traversing range. - check the wiring of the STOP cam.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

<b>F07493</b>	<b>LR: Overflow of the value range for position actual value</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset.</p> <p>Fault value (r0949, interpret decimal):</p> <ol style="list-style-type: none"><li>1: The position actual value (r2521) has exceeded the value range.</li><li>2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range.</li><li>3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.</li></ol> <p>Note:</p> <p>For a linear encoder, the following must be maintained:</p> <ul style="list-style-type: none"><li>- <math>p0407 * p2503 / (2^{p0418} * 10^7) &lt; 1</math></li><li>- <math>p0407 * p2503 / (2^{p0419} * 10^7) &lt; 1</math></li></ul>
<b>Remedy:</b>	<p>If required, reduce the traversing range or position resolution (p2506). Increase the fine resolution of absolute position actual value (p0419).</p> <p>Note for fault value = 3:</p> <p>If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.</p> <p>For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:</p> <ol style="list-style-type: none"><li>1. Motor encoder without position tracking <math>p2506 * p0433 * p2505 / (p0432 * p2504)</math> <math>p2506 * p0433 * p2505 * p0421 / (p0432 * p2504)</math> for multiturn encoders</li><li>2. Motor encoder with position tracking for measuring gear: <math>p2506 * p0412 * p2505 / p2504</math></li><li>3. Motor encoder with position tracking for load gear <math>p2506 * p2721 * p0433 / p0432</math></li><li>4. Motor encoder with position tracking for load and measuring gear <math>p2506 * p2721</math></li><li>5. Direct encoder without position tracking <math>p2506 * p0433 / p0432</math> <math>p2506 * p0433 * p0421 / p0432</math> for multiturn encoders</li><li>6. Direct encoder with position tracking for measuring gear <math>p2506 * p0412</math></li></ol>
<b>F07494</b>	<b>LR: Drive Data Set changeover in operation</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>A Drive Data Set changeover (DDS) with a change of the mechanical relationships (p2503 ... 2506), direction of rotation (p1821) or the encoder assignment (p2502) was requested in operation.</p> <p>Note:</p> <p>DDS: Drive Data Set</p>
<b>Remedy:</b>	To changeover the drive data set, initially, exit the "operation" mode.
<b>A07495 (F)</b>	<b>LR: Reference function interrupted</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	<p>An activated reference function (reference mark search or measuring probe evaluation) was interrupted.</p> <ul style="list-style-type: none"><li>- an encoder fault has occurred (Gn_ZSW.15 = 1).</li><li>- position actual value was set during an activated reference function.</li></ul>

- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).

- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

**Remedy:**

- check the causes and resolve.

- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowled. upon F: IMMEDIATELY

---

**A07496 EPOS: Enable not possible**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** It is not possible to enable the basic positioner because at least one signal is missing.  
Alarm value (r2124, interpret decimal):  
1: EPOS enable missing (BI: p2656).  
2: Position actual value, valid feedback signal missing (BI: p2658).

**Remedy:** Check the appropriate binector inputs and signals.

---

**A07497 LR: Position setting value activated**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The position actual value is set to the value received via CI: p2515 while BI: p2514 = 1 signal. A possible system deviation cannot be corrected.

**Remedy:** Not necessary.  
The alarm automatically disappears with BI: p2514 = 0 signal.

---

**A07498 (F) LR: Measuring probe evaluation not possible**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** When evaluating the measuring probe, an error occurred.  
Alarm value (r2124, interpret decimal):  
6: The input terminal for the measuring probe is not set.  
4098: Error when initializing the measuring probe.  
4100: The measuring pulse frequency is too high.  
> 50000: The measuring clock cycle is not a multiple integer of the position controller clock cycle.

**Remedy:** De-activate the measuring probe evaluation (BI: p2509 = 0 signal).  
Re alarm value = 6:  
Set the input terminal for the measuring probe (p0488, p0489 or p2517, p2518).  
Re alarm value = 4098:  
Check the Control Unit hardware.  
Re alarm value = 4100:  
Reduce the frequency of the measuring pulses at the measuring probe.  
Re alarm value > 50000:  
Set the clock cycle ratio of the measuring clock cycle to the position controller clock cycle to an integer multiple.  
To do this, the currently effective measuring clock cycle can be determined from the alarm value as follows:  
T<sub>meas</sub> [125 µs] = alarm value - 50000  
With PROFIBUS, the measuring clock cycle corresponds to the PROFIBUS clock cycle (r2064[1]).  
Without PROFIBUS, the measuring clock cycle is an internal cycle time that cannot be influenced.

Reaction upon F: OFF1

<b>Remedy:</b>	The index of the motor data set associated with the drive data set should be entered into p0186. See also: p0186 (Motor Data Sets (MDS) number)

---

<b>F07502</b>	<b>Drive: Encoder Data Set EDS not configured</b>
<b>Message value:</b>	Drive data set: %1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	Only for power units: The encoder data set was not configured - this means that a data set number was not entered into the associated drive data set. Fault value (r0949, interpret decimal): The fault value includes the drive data set number of p0187, p0188 and p0189. The fault value is increased by 100 * encoder number (e.g. for p0189: Fault value 3xx with xx = data set number).
<b>Remedy:</b>	The index of the encoder data set associated with the drive data set should be entered into p0187 (1st encoder), p0188 (2nd encoder) and p0189 (3rd encoder).

---

<b>F07503</b>	<b>EPOS: STOP cam approached with the incorrect traversing direction</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The STOP cam MINUS was approached in the positive traversing direction or the STOP cam PLUS was approached in the negative traversing direction.
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- check the wiring of the STOP cam (BI: p2569, BI: p2570).</li> <li>- check the traversing direction to approach the STOP cam.</li> </ul>
<b>A07504</b>	<b>Drive: Motor data set is not assigned to a drive data set</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	<p>A motor data set is not assigned to a drive object.</p> <p>All of the existing motor data sets in the drive data sets must be assigned using the MDS number (p0186[0...n]). There must be at least as many drive data sets as motor data sets.</p> <p>Alarm value (r2124, interpret decimal):</p> <p>Number of the motor data set that has not been assigned.</p>
<b>Remedy:</b>	<p>In the drive data sets, assign the non-assigned motor data set using the MDS number (p0186[0...n]).</p> <ul style="list-style-type: none"> <li>- check whether all of the motor data sets are assigned to drive data sets.</li> <li>- if required, delete superfluous motor data sets.</li> <li>- if required, set up new drive data sets and assign to the corresponding motor data sets.</li> </ul> <p>See also: p0186 (Motor Data Sets (MDS) number)</p>
<b>A07505</b>	<b>EPOS: Task fixed stop not possible in the U/f/SLVC mode</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	<p>In the U/f/SLVC mode, an attempt was made to execute a traversing block with the "fixed stop" task. This is not possible.</p> <p>Alarm value (r2124, interpret decimal):</p> <p>Number of the traversing block with an illegal task parameter.</p>
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- Check the traversing block and change the task.</li> <li>- change the open-loop/closed-loop control mode (p1300).</li> </ul> <p>See also: p1300 (Open-loop/closed-loop control operating mode)</p>
<b>F07509</b>	<b>Drive: Component number missing</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>A Drive Data Set (DDS) is assigned to a Motor Data Set (MDS) or Encoder Data Set (EDS) that does not have a component number.</p> <p>Alarm value (r2124, interpret decimal):</p> <p>nnmmmmxyyy</p> <p>nn: Number of the MDS/EDS.</p> <p>mmm: Parameter number of the missing component number.</p> <p>xx: Number of the DDS that is assigned to the MDS/EDS.</p> <p>yyy: Parameter number that references the MDS/EDS.</p> <p>Example:</p> <p>p0186[7] = 5: DDS 7 is assigned MDS 5.</p> <p>p0131[5] = 0: There is no component number set in MDS 5.</p> <p>Alarm value = 0513107186</p>

**Remedy:** In the drive data sets, no longer assign MDS/EDS using p0186, p0187, p0188, p0189 or set a valid component number.  
See also: p0131, p0141, p0142, p0186, p0187, p0188, p0189

---

**F07510 Drive: Identical encoder in the drive data set**

**Message value:** %1

**Drive object:** All objects

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** More than one encoder with identical component number is assigned to a single drive data set. In one drive data set, it is not permissible that identical encoders are operated together.

Fault value (r0949, interpret decimal):

1000 \* first identical encoder + 100 \* second identical encoder + drive data set.

Example:

Fault value = 1203 means:

In drive data set 3, the first (p0187[3]) and second encoder (p0188[3]) are identical.

**Remedy:** Assign the drive data set to different encoders.

See also: p0141 (Encoder interface (Sensor Module) component number), p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)

---

**F07511 Drive: Encoder used a multiple number of times**

**Message value:** %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** Each encoder may only be assigned to one drive and within a drive must - in each drive data set - either always be encoder 1, always encoder 2 or always encoder 3. This unique assignment has been violated.

Fault value (r0949, interpret decimal):

The two parameters in coded form, that refer to the same component number.

First parameter:

Index: First and second decimal place (99 for EDS, not assigned DDS)

Parameter number: Third decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS not assigned DDS)

Drive number: Fourth and fifth decimal place

Second parameter:

Index: Sixth and seventh decimal place (99 for EDS, not assigned DDS)

Parameter number: Eighth decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS, not assigned DDS)

Drive number: Ninth and tenth decimal place

See also: p0141 (Encoder interface (Sensor Module) component number)

**Remedy:** Correct the double use of a component number using the two parameters coded in the fault value.

---

**F07512 Drive: Encoder data set changeover cannot be parameterized**

**Message value:** %1

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** Using p0141, a changeover of the encoder data set is prepared that is illegal. In this firmware release, an encoder data set changeover is only permitted for the components in the actual topology.

Alarm value (r2124, interpret decimal):

Incorrect EDS data set number.

See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)

**Remedy:** Every encoder data set must be assigned its own dedicated DRIVE-CLiQ socket. The component numbers of the encoder interfaces (p0141) must have different values within a drive object.

The following must apply:

p0141[0] not equal to p0141[1] not equal to ... not equal to p0141[n]

<b>A07514 (N)</b>	<b>Drive: Data structure does not correspond to the interface module</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE

<b>Cause:</b>	<p>The interface mode "SIMODRIVE 611 universal" was set (p2038 = 1) and the data structure does not correspond to this mode.</p> <p>The following settings are possible, depending on the number of data sets:</p> <p>Number of DDS/MDS (p0180/p0130): p0186</p> <p>1/1: p0186[0] = 0</p> <p>2/2: p0186[0] = 0, p0186[1] = 1</p> <p>4/4: p0186[0] = 0, p0186[1] = 1, p0186[2] = 2, p0186[3] = 3</p> <p>8/8: p0186[0] = 0, p0186[1] = 1, p0186[2] = 2 ... p0186[7] = 7</p> <p>16/16: p0186[0] = 0, p0186[1] = 1, p0186[2] = 2 ... p0186[15] = 15</p> <p>32/32: p0186[0] = 0, p0186[1] = 1, p0186[2] = 2 ... p0186[31] = 31</p> <p>2/1: p0186[0, 1] = 0</p> <p>4/2: p0186[0, 1] = 0, p0186[1, 2] = 1</p> <p>8/4: p0186[0, 1] = 0, p0186[1, 2] = 1, p0186[3, 4] = 2, p0186[5, 6] = 3</p> <p>16/8: p0186[0, 1] = 0, p0186[1, 2] = 1, p0186[3, 4] = 2 ... p0186[14, 15] = 7</p> <p>32/16: p0186[0, 1] = 0, p0186[1, 2] = 1, p0186[3, 4] = 2 ... p0186[30, 31] = 15</p> <p>4/1: p0186[0, 1, 2, 3] = 0</p> <p>8/2: p0186[0, 1, 2, 3] = 0, p0186[4, 5, 6, 7] = 1</p> <p>16/4: p0186[0, 1, 2, 3] = 0, p0186[4, 5, 6, 7] = 1, p0186[8, 9, 10, 11] = 2, p0186[12, 13, 14, 15] = 3</p> <p>32/8: p0186[0, 1, 2, 3] = 0, p0186[4, 5, 6, 7] = 1, p0186[8, 9, 10, 11] = 2 ... p0186[28, 29, 30, 31] = 7</p> <p>8/1: p0186[0...7] = 0</p> <p>16/2: p0186[0...7] = 0, p0186[8...15] = 1</p> <p>32/4: p0186[0...7] = 0, p0186[8...15] = 1, p0186[16...23] = 2, p0186[24...31] = 3</p> <p>16/1: p0186[0...15] = 0</p> <p>32/2: p0186[0...15] = 0, p0186[16...31] = 1</p> <p>32/1: p0186[0...31] = 0</p> <p>9/2: p0186[0...7] = 0, p0186[8] = 1</p> <p>10/2: p0186[0...7] = 0, p0186[8, 9] = 1</p> <p>12/2: p0186[0...7] = 0, p0186[8...11] = 1</p> <p>See also: p0180 (Number of Drive Data Sets (DDS)), p0186 (Motor Data Sets (MDS) number), p2038 (IF1 PROFIdrive STW/ZSW interface mode)</p>
<b>Remedy:</b>	<p>- Check the data structure according to the possible settings mentioned in the cause.</p> <p>- check the interface mode (p2038).</p>
Reaction upon N:	NONE
Acknowl. upon N:	NONE
<b>F07515</b>	<b>Drive: Power unit and motor incorrectly connected</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>A power unit (via PDS) was assigned to a motor (via MDS) in a drive data set that is not connected in the target topology. It is possible that a motor has not been assigned to the power unit (p0131).</p> <p>Fault value (r0949, interpret decimal):</p> <p>Number of the incorrectly parameterized drive data set.</p>
<b>Remedy:</b>	<p>- assign the drive data set to a combination of motor and power unit permitted by the target topology.</p> <p>- adapt the target topology.</p> <p>- If required, for a missing motor, recreate the component (drive Wizard).</p> <p>See also: p0121 (Power unit component number), p0131 (Motor component number), p0186 (Motor Data Sets (MDS) number)</p>

---

<b>F07516</b>	<b>Drive: Re-commission the data set</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The assignment between the drive data set and motor data set (p0186) or between the drive data set and the encoder data set was modified (p0187). This is the reason that the drive data set must re-commissioned. Fault value (r0949, interpret decimal): Drive data set to be re-commissioned.
<b>Remedy:</b>	Commission the drive data set specified in the fault value (r0949).

---

<b>F07517</b>	<b>Drive: Encoder data set changeover incorrectly parameterized</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An MDS cannot have different motor encoders in two different DDS. The following parameterization therefore results results in an error: p0186[0] = 0, p0187[0] = 0 p0186[0] = 0, p0187[0] = 1 Alarm value (r2124, interpret decimal): The lower 16 bits indicate the first DDS and the upper 16 bits indicate the second DDS.
<b>Remedy:</b>	If you wish to operate a motor once with one motor encoder and then another time with the other motor encoder, then you must set up two different MDSs, in which the motor data are the same. Example: p0186[0] = 0, p0187[0] = 0 p0186[0] = 1, p0187[0] = 1

---

<b>F07518</b>	<b>Drive: Motor data set changeover incorrectly parameterized</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The system has identified that two motor data sets were incorrectly parameterized. Parameter r0313 (calculated from p0314, p0310, p0311), r0315 and p1982 may only have different values if the motor data sets are assigned different motors. p0827 is used to assign the motors and/contactors. It is not possible to toggle between motor data sets. Alarm value (r2124, interpret hexadecimal): xxxxyyyy: xxxx: First DDS with assigned MDS, yyyy: Second DDS with assigned MDS
<b>Remedy:</b>	Correct the parameterization of the motor data sets.

---

<b>A07519</b>	<b>Drive: Motor changeover incorrectly parameterized</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	With the setting p0833.0 = 1, a motor changeover via the application is selected. This is the reason that p0827 must have different values in the appropriate motor data set. Alarm value (r2124, interpret hexadecimal): xxxxyyyy: xxxx: First MDS, yyyy: Second MDS
<b>Remedy:</b>	- parameterize the appropriate motor data sets differently (p0827). - select the setting p0833.0 = 0 (motor changeover via the drive).

<b>A07520</b>	<b>Drive: Motor cannot be changed over</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The motor cannot be changed over. Alarm value (r2124, interpret decimal): 1: The contactor for the motor that is presently active cannot be opened, because for a synchronous motor, the speed (r0063) is greater than the speed at the start of field weakening (p3048). As long as r0063 > p3048, the current in the motor does not decay in spite of the pulses being suppressed. 2: The "contactor opened" feedback signal was not detected within 1 s. 3: The "contactor closed" feedback signal was not detected within 1 s.
<b>Remedy:</b>	Re alarm value = 1: Set the speed lower than the speed at the start of field weakening (r0063 < p3048). Re alarm value = 2, 3: Check the feedback signals of the contactor involved.
<b>A07530</b>	<b>Drive: Drive Data Set DDS not present</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The selected drive data set is not available (p0837 > p0180). The drive data set was not changed over. See also: p0180, p0820, p0821, p0822, p0823, p0824, r0837
<b>Remedy:</b>	- select the existing drive data set. - set up additional drive data sets.
<b>A07531</b>	<b>Drive: Command Data Set CDS not present</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The selected command data set is not available (p0836 > p0170). The command data set was not changed over. See also: p0810 (Command data set selection CDS bit 0), p0811 (Command data set selection CDS bit 1), r0836 (Command Data Set CDS selected)
<b>Remedy:</b>	- select the existing command data set. - set up additional command data sets.
<b>A07541</b>	<b>Drive: Data set changeover not possible</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The selected drive data set changeover and the assigned motor changeover are not possible and are not carried out. For synchronous motors, the motor contactor may only be switched for actual speeds less than the speed at the start of field weakening (r0063 < p3048). See also: r0063 (Speed actual value)
<b>Remedy:</b>	Reduce the speed below the speed at the start of field weakening.

---

<b>A07550 (F, N)</b>	<b>Drive: Not possible to reset encoder parameters</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	When carrying out a factory setting (e.g. using p0970 = 1), it was not possible to reset the encoder parameters. The encoder parameters are directly read out of the encoder via DRIVE-CLiQ. Alarm value (r2124, interpret decimal): Component number of the encoder involved.
<b>Remedy:</b>	- repeat the operation. - check the DRIVE-CLiQ connection.

<b>F07551</b>	<b>Drive encoder: No commutation angle information</b>
<b>Message value:</b>	Fault cause: %1, drive data set: %2
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (IASC/DCBRAKE)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The commutation angle information is missing. This means that synchronous motors cannot be controlled (closed-loop control) Fault value (r0949, interpret decimal): yyyyxxxx dec: yyyy = fault cause, xxxx = drive data set yyyy = 1 dec: The motor encoder used does not supply an absolute commutation angle. yyyy = 2 dec: The selected ratio of the measuring gear does not match the motor pole pair number.
<b>Remedy:</b>	Re fault cause = 1: - check the encoder parameterization (p0404). - use an encoder with track C/D, EnDat interface of Hall sensors. - use an encoder with sinusoidal A/B track for which the motor pole pair number (r0313) is an integer multiple of the encoder pulse number (p0408). - activate the pole position identification routine (p1982 = 1). Re fault cause = 2: - the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: (p0314 * p0433) / p0432. Note: For operation with track C/D, this quotient must be less than 8. See also: p0402 (Gearbox type selection), p0404 (Encoder configuration effective), p0432 (Gearbox factor, encoder revolutions), p0433 (Gearbox factor, motor/load revolutions)

---

<b>F07552 (A)</b>	<b>Drive encoder: Encoder configuration not supported</b>
<b>Message value:</b>	Fault cause: %1, component number: %2, encoder data set: %3
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The requested encoder configuration is not supported. Only bits may be requested in p0404 that are signaled as being supported by the encoder evaluation in r0456. Fault value (r0949, interpret decimal): ccccbbaa hex: cccc = fault cause, bb = component number, aa = encoder data set cccc = 1: encoder sin/cos with absolute track (is supported by SME25). cccc = 3: Squarewave encoder (this is supported by SMC30). cccc = 4: sin/cos encoder (this is supported by SMC20, SMI20, SME20, SME25). cccc = 10: DRIVE-CLiQ encoder (is supported by DQI).

cccc = 12: sin/cos encoder with reference mark (this is supported by SME20).  
 cccc = 15: Commutation with zero mark for separately-excited synchronous motors with VECTORMV.  
 cccc = 23: Resolver (this is supported by SMC10, SMI10).  
 cccc = 65535: Other function (compare r0456 and p0404).  
 See also: p0404 (Encoder configuration effective), r0456 (Encoder configuration supported)

**Remedy:**  
 - check the encoder parameterization (p0400, p0404).  
 - use the matching encoder evaluation (r0456).

Reaction upon A: NONE

### **F07553 (A) Drive encoder: Sensor Module configuration not supported**

**Message value:** Encoder data set: %1, first incorrect bit: %2, incorrect parameter: %3

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:**  
 Infeed: OFF2 (NONE, OFF1)  
 Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:**  
 The Sensor Module does not support the requested configuration.  
 For incorrect p0430 (cc = 0), the following applies:  
 - In p0430 (requested functions), at least 1 bit was set that is not set in r0458 (supported functions) (exception: Bit 19, 28, 29, 30, 31).  
 - p1982 > 0 (pole position identification requested), but r0458.16 = 0 (pole position identification not supported).  
 For incorrect p0437 (cc = 1), the following applies:  
 - In p0437 (requested functions), at least 1 bit was set that is not set in r0459 (supported functions).  
 Fault value (r0949, interpret hexadecimal):  
 ddccbbaa hex  
 aa: encoder data set number  
 bb: first incorrect bit  
 cc: incorrect parameter  
 cc = 0: incorrect parameter is p0430  
 cc = 1: incorrect parameter is p0437  
 cc = 2: incorrect parameter is r0459  
 dd: reserved (always 0)

**Remedy:**  
 - check the encoder parameterization (p0430, p0437).  
 - check the pole position identification routine (p1982).  
 - use the matching encoder evaluation (r0458, r0459).  
 See also: p0430, p0437, r0458, r0459, p1982

Reaction upon A: NONE

### **F07555 (A) Drive encoder: Configuration position tracking**

**Message value:** Component number: %1, encoder data set: %2, drive data set: %3, fault cause: %4

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:**  
 Infeed: OFF2 (NONE, OFF1)  
 Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:**  
 For position tracking, the configuration is not supported.  
 Position tracking can only be activated for absolute encoders.  
 For linear axes, it is not possible to simultaneously activate the position tracking for load and measuring gears.  
 Fault value (r0949, interpret hexadecimal):  
 ddccbbaa hex  
 aa = encoder data set  
 bb = component number  
 cc = drive data set  
 dd = fault cause  
 dd = 00 hex = 0 dec  
 An absolute encoder is not being used.  
 dd = 01 hex = 1 dec  
 Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM.

dd = 02 hex = 2 dec

For a linear axis, the position tracking was activated for the load and measuring gear.

dd = 03 hex = 3 dec

Position tracking cannot be activated because position tracking with another gear ratio, axis type or tolerance window has already been detected for this encoder data set.

dd = 04 hex = 4 dec

A linear encoder is being used.

See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration)

**Remedy:**

- use an absolute encoder.
- if necessary, de-select the position tracking (p0411 for the measuring gear, p2720 for the load gear).
- use a Control Unit with sufficient NVRAM.
- Only activate position tracking of the load gear in the same encoder data set if the gear ratio (p2504, p2505), axis type (p2720.1) and tolerance window (p2722) are also the same.

**A07558 (F)      Encoder 2: Reference point coordinate not in the permissible range**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in the supplementary information.

**Remedy:** Set the reference point coordinate less than the value from the supplementary information.

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

<b>A07559 (F)</b>	<b>Encoder 3: Reference point coordinate not in the permissible range</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in the supplementary information.
<b>Remedy:</b>	Set the reference point coordinate less than the value from the supplementary information.
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowled. upon F:	IMMEDIATELY
<b>F07560</b>	<b>Drive encoder: Number of pulses is not to the power of two</b>
<b>Message value:</b>	Encoder data set: %1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	For rotary absolute encoders, the pulse number in p0408 must be to the power of two. Fault value (r0949, interpret decimal): The fault value includes the encoder data set number involved.
<b>Remedy:</b>	- check the parameterization (p0408, p0404.1, r0458.5). - upgrade the Sensor Module firmware if necessary
<b>F07561</b>	<b>Drive encoder: Number of multiturn pulses is not to the power of two</b>
<b>Message value:</b>	Encoder data set: %1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The multiturn resolution in p0421 must be to the power of two. Fault value (r0949, interpret decimal): The fault value includes the encoder data set number involved.
<b>Remedy:</b>	- check the parameterization (p0421, p0404.1, r0458.5). - upgrade the Sensor Module firmware if necessary
<b>F07562 (A)</b>	<b>Drive, encoder: Position tracking, incremental encoder not possible</b>
<b>Message value:</b>	Fault cause: %1, component number: %2, encoder data set: %3
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The requested position tracking for incremental encoders is not supported. Fault value (r0949, interpret hexadecimal): ccccbaa hex aa = encoder data set bb = component number cccc = fault cause cccc = 00 hex = 0 dec The encoder type does not support the "Position tracking incremental encoder" function. cccc = 01 hex = 1 dec Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM. cccc = 04 hex = 4 dec A linear encoder is used that does not support the "position tracking" function. See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration), r0456 (Encoder configuration supported)

**Remedy:**

- check the encoder parameterization (p0400, p0404).
- use a Control Unit with sufficient NVRAM.
- if required, de-select position tracking for the incremental encoder (p0411.3 = 0).

**A07569 (F) Encoder could not be identified**

**Message value:** -  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** During encoder identification (waiting) with p0400 = 10100, the encoder could not be identified.  
Either the wrong encoder has been installed or no encoder has been installed, the wrong encoder cable has been connected or no encoder cable has been connected to the Sensor Module, or the DRIVE-CLiQ component has not been connected to DRIVE-CLiQ.  
Note:  
Encoder identification must be supported by the encoder and is possible in the following cases:  
- Encoder with EnDat interface  
- Motor with DRIVE-CLiQ  
**Remedy:**  
- check and, if necessary, connect the encoder and/or encoder cable.  
- check and, if necessary, establish the DRIVE-CLiQ connection.  
- in the case of encoders that cannot be identified (e.g. encoders without EnDat interface), the correct encoder type must be entered in p0400.

**F07599 (A) Encoder 1: Adjustment not possible**

**Message value:** Drive data set: %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.  
**Remedy:** If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.  
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:  
1. Motor encoder without position tracking:  
 $p2506 * p0433 * p2505 / (p0432 * p2504)$   
 $p2506 * p0433 * p2505 * p0421 / (p0432 * p2504)$  for multiturn encoders  
2. Motor encoder with position tracking for measuring gear:  
 $p2506 * p0412 * p2505 / p2504$   
3. Motor encoder with position tracking for load gear:  
 $p2506 * p2721 * p0433 / p0432$   
4. Motor encoder with position tracking for load and measuring gear:  
 $p2506 * p2721$   
5. Direct encoder without position tracking:  
 $p2506 * p0433 / p0432$   
 $p2506 * p0433 * p0421 / p0432$  for multiturn encoders  
6. Direct encoder with position tracking for measuring gear:  
 $p2506 * p0412$   
Reaction upon A: NONE

### F07800 Drive: No power unit present

**Message value:** -

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** The power unit parameters cannot be read or no parameters are stored in the power unit.  
 It is possible that the DRIVE-CLiQ cable between the Control Unit and power unit is interrupted or defective.  
**Note:**  
 This fault also occurs if an incorrect topology was selected in the commissioning software and this parameterization is then downloaded to the Control Unit.  
 See also: r0200 (Power unit code number actual)

- Remedy:**
- carry out a POWER ON (power off/on) for all components.
  - check the DRIVE-CLiQ cable between the Control Unit and power unit.
  - Check the power unit and replace if necessary.
  - check the Control Unit, and if required replace it.
  - after correcting the topology, the parameters must be again downloaded using the commissioning software.

---

**F07801      Drive: Motor overcurrent**

- Message value:** -
- Drive object:** VECTOR\_G
- Reaction:** OFF2 (NONE, OFF1, OFF3)
- Acknowledge:** IMMEDIATELY
- Cause:** The permissible motor limit current was exceeded.
- effective current limit set too low.
  - current controller not correctly set.
  - U/f operation: Up ramp was set too short or the load is too high.
  - U/f operation: Short-circuit in the motor cable or ground fault.
  - U/f operation: Motor current does not match current of power unit.
  - Switching to rotating motor without flying restart function (p1200).
- Note:**  
Limit current =  $2 \times \text{minimum (p0640, } 4 \times \text{p0305} \times \text{p0306)} \geq 2 \times \text{p0305} \times \text{p0306}$
- Remedy:**
- check the current limits (p0640).
  - vector control: Check the current controller (p1715, p1717).
  - U/f control: Check the current limiting controller (p1340 ... p1346).
  - increase the up ramp (p1120) or reduce the load.
  - check the motor and motor cables for short-circuit and ground fault.
  - check the motor for the star-delta configuration and rating plate parameterization.
  - check the power unit and motor combination.
  - Choose "flying restart" function (p1200) if switched to rotating motor.

---

**F07802      Drive: Infeed or power unit not ready**

- Message value:** -
- Drive object:** VECTOR\_G
- Reaction:** OFF2 (NONE)
- Acknowledge:** IMMEDIATELY
- Cause:** After an internal power-on command, the infeed or drive does not signal ready.
- monitoring time is too short.
  - DC link voltage is not present.
  - associated infeed or drive of the signaling component is defective.
  - supply voltage incorrectly set.
- Remedy:**
- increase the monitoring time (p0857).
  - ensure that there is a DC link voltage. Check the DC link busbar. Enable the infeed.
  - replace the associated infeed or drive of the signaling component.
  - check the line supply voltage setting (p0210).
- See also: p0857 (Power unit monitoring time)

---

**A07805 (N)      Infeed: Power unit overload I2t**

- Message value:** -
- Drive object:** B\_INF
- Reaction:** NONE
- Acknowledge:** NONE
- Cause:** Alarm threshold for I2t overload (p0294) of the power unit exceeded.
- Remedy:**
- reduce the continuous load.
  - adapt the load duty cycle.
- Reaction upon N: NONE
- Acknowled. upon N: NONE

<b>A07805 (N)</b>	<b>Drive: Power unit overload I2t</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	Alarm threshold for I2t overload (p0294) of the power unit exceeded. The response parameterized in p0290 becomes active. See also: p0290 (Power unit overload response)
<b>Remedy:</b>	- reduce the continuous load. - adapt the load duty cycle. - check the assignment of the rated currents of the motor and Motor Module.
Reaction upon N:	NONE
Acknowl. upon N:	NONE
<b>F07807</b>	<b>Drive: Short-circuit/ground fault detected</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (NONE)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A phase-phase short-circuit or ground fault was detected at the motor-side output terminals of the converter. Fault value (r0949, interpret decimal): 1: Short-circuit, phases U-V 2: Short-circuit, phases U-W 3: Short-circuit, phases V-W 4: Ground fault with overcurrent 1xxxx: Ground fault with current in phase U detected (xxxx = component of the current in phase V in per mille) 2xxxx: Ground fault with current in phase V detected (xxxx = component of the current in phase U in per mille) Note: Also when interchanging the line and motor cables is identified as a motor-side short circuit. Connecting to a motor that is either not de-energized or partially de-energized is possibly detected as ground fault.
<b>Remedy:</b>	- check the motor-side converter connection for a phase-phase short-circuit. - rule-out interchanged line and motor cables. - check for a ground fault. For a ground fault: - do not enable the pulses when connecting to a rotating motor without the "Flying restart" function activated (p1200). - increase the de-energization time (p0347). - If required, deactivate the monitoring (p1901).
<b>F07808 (A)</b>	<b>HF damping module: damping not ready</b>
<b>Message value:</b>	New message: %1
<b>Drive object:</b>	VECTOR_G

<b>F07810</b>	<b>Drive: Power unit EEPROM without rated data</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	No rated data are stored in the power unit EEPROM. See also: p0205 (Power unit application), r0206 (Rated power unit power), r0207 (Rated power unit current), r0208 (Rated power unit line supply voltage), r0209 (Power unit, maximum current)
<b>Remedy:</b>	Replace the power unit or inform Siemens Customer Service.

---

<b>F07815</b>	<b>Drive: Power unit has been changed</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	B_INF
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The code number of the actual power unit does not match the saved number. This only occurs if the comparator in p9906 or p9908 is not at 2 (low) or 3 (minimum). Fault value (r0949, interpret decimal): Number of the incorrect parameter. See also: r0200 (Power unit code number actual), p0201 (Power unit code number)
<b>Remedy:</b>	Connect the original power unit and power up the Control Unit again (POWER ON) or set p0201 to r0200 and exit commissioning with p0010 = 0. For infeeds, the following applies: Line reactors or line filters must be used that are specified for the new power unit. A line supply and DC link identification routine (p3410 = 5) must then be carried out. It is not possible to change the power unit without re-commissioning the system if the type of infeed (A_Infeed, B_Infeed, S_Infeed), the type of construction/design (booksize, chassis) or the voltage class differ between the old and new power units. For inverters, the following applies: If the new power unit is accepted, then if required, the current limit (p0640) can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same). If not only the power unit is changed, but also the motor, then the motor must be re-commissioned (e.g. using p0010 = 1). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ. See also: r0200 (Power unit code number actual)

---

<b>F07815</b>	<b>Drive: Power unit has been changed</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The code number of the actual power unit does not match the saved number. This only occurs if the comparator in p9906 or p9908 is not at 2 (low) or 3 (minimum). Fault value (r0949, interpret decimal): Number of the incorrect parameter. See also: r0200 (Power unit code number actual), p0201 (Power unit code number)
<b>Remedy:</b>	- Connect the original power unit and switch on the Control Unit again (POWER ON). - Set p0201 to r0200 and exit commissioning with p0010 = 0. Note: If the power unit type was changed (see r0203) or the motor replaced, then the motor must be recommissioned (e.g. using p0010 = 1, p3900 = 3, p1900 = 1, 2). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ. If the new power unit is accepted, then if required, the current limit p0640 can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same). If the comparison stage in p9906 is set to 2, 3, then commissioning can be exited (p0010 = 0) and the fault acknowledged. This procedure is not recommended for different power unit types. See also: r0200 (Power unit code number actual)

<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The simulation mode is activated and the DC link voltage is greater than the permissible value of 40 V.
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- switch out (disable) simulation mode (p1272 = 0) and acknowledge the fault.</li> <li>- reduce the input voltage in order to reach a DC link voltage below 40 V.</li> </ul>
<b>F07840</b>	<b>Drive: Infeed operation missing</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (NONE)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>The signal "infeed operation" is not present although the enable signals for the drive have been present for longer than the parameterized monitoring time (p0857).</p> <ul style="list-style-type: none"> <li>- infeed not operational.</li> <li>- interconnection of the binector input for the ready signal is either incorrect or missing (p0864).</li> <li>- infeed is presently carrying out a line supply identification routine.</li> </ul>

**Remedy:**

- bring the infeed into an operational state.
- check the interconnection of the binector input for the signal "infeed operation" (p0864).
- increase the monitoring time (p0857).
- wait until the infeed has completed the line supply identification routine.

See also: p0857 (Power unit monitoring time), p0864 (Infeed operation)

---

**F07841 (A)      Drive: Infeed operation withdrawn**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** OFF2 (NONE, OFF1, OFF3)

**Acknowledge:** IMMEDIATELY

**Cause:** The signal "infeed operation" was withdrawn in operation.

- interconnection of the binector input for the signal "infeed operation" is either incorrect or missing (p0864).
- the enable signals of the infeed were disabled.
- due to a fault, the infeed withdraws the signal "infeed operation".

**Remedy:**

- check the interconnection of the binector input for the "infeed operation" signal (p0864).
- check the enable signals of the infeed and if required, enable.
- remove and acknowledge an infeed fault.

**Note:**  
If this drive is intended to back up the DC link regeneratively, then the fault response must be parameterized for NONE, OFF1 or OFF3. so that the drive can continue to operate even after the infeed fails.

<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	Motor has been operating at the torque limit longer than the time specified in p2177 and below the speed threshold in p2175. This signal can also be initiated if the speed actual value is oscillating and the speed controller output repeatedly goes to its limit. If the simulation mode is enabled (p1272 = 1) and the closed-loop control with speed encoder activated (p1300 = 21), then the inhibit signal is generated if the encoder signal is not received from a motor that is driven with the torque setpoint of the closed-loop control. See also: p2175 (Motor blocked speed threshold), p2177 (Motor blocked delay time)
<b>Remedy:</b>	- check that the motor can freely move. - check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539. - check the parameter, message "Motor blocked" and if required, correct (p2175, p2177). - check the inversion of the actual value (p0410). - check the motor encoder connection. - check the encoder pulse number (p0408). - for SERVO with encoderless operation and motors with low power ratings (< 300 W), increase the pulse frequency (p1800). - after de-selecting the "Basic positioner" (EPOS) function mode, check the motoring (p1528) and regenerative (p1529) torque limit and modify again.

- in the simulation mode and operation with speed encoder, the power unit to which the motor is connected must be powered up and must be supplied with the torque setpoint of the simulated closed-loop control. Otherwise, change over to encoderless control (see p1300).

**F07901 Drive: Motor overspeed**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** OFF2 (IASC/DCBRAKE)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The maximum permissible speed was either positively or negatively exceeded.  
 The maximum permissible positive speed is formed as follows: Minimum (p1082, Cl: p1085) + p2162  
 The maximum permissible negative speed is formed as follows: Maximum (-p1082, Cl: 1088) - p2162  
**Remedy:** The following applies for a positive direction of rotation:  
 - check r1084 and if required, correct p1082, Cl:p1085 and p2162.  
 The following applies for a negative direction of rotation:  
 - check r1087 and if required, correct p1082, Cl:p1088 and p2162.  
 Activate pre-control of the speed limiting controller (p1401.7 = 1).  
 Increase the hysteresis for the overspeed signal p2162. This upper limit is dependent upon the maximum motor speed p0322 and the maximum speed p1082 of the setpoint channel.

---

**F07902 (N, A) Drive: Motor stalled**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The system has identified that the motor has stalled for a time longer than is set in p2178.  
 Fault value (r0949, interpret decimal):  
 1: Stall detection using r1408.11 (p1744 or p0492).  
 2: Stall detection using r1408.12 (p1745).  
 3: Stall detection using r0056.11 (only for separately excited synchronous motors).  
 See also: p1744 (Motor model speed threshold stall detection), p2178 (Motor stalled delay time)  
**Remedy:** It should always be carefully ensured that the motor data identification (p1910) as well as the rotating measurement (p1960) were carried out (also refer to r3925). For synchronous motors with encoder, the encoder must have been adjusted (p1990).  
 For closed-loop speed and torque control with speed encoder, the following applies:  
 - check the speed signal (interrupted cable, polarity, pulse number, broken encoder shaft).  
 - check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the same motor that is controlled for the data set changeover.  
 If there is no fault, then the fault tolerance (p1744 or p0492) can be increased. For resolvers with a high signal ripple, for example p0492 should be increased and the speed signal smoothed (p1441, p1442).  
 If the stalled motor should take place in the range of the monitor model and for speeds of less than 30 % of the rated motor speed, then a change can be made directly from the current model into the flux impression (p1401.5 = 1). We therefore recommend that the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 x p0311; p1753 = 5 %).  
 - check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the motor that is controlled for the data set changeover.  
 For closed-loop speed and torque control without speed encoder, the following applies:  
 - Check whether the drive stalls solely due to the load in controlled mode (r1750.0) or when the speed setpoint is still zero. If so, increase the current setpoint via p1610 or set p1750.2 = 1 (sensorless vector control to standstill for passive loads).  
 - If the motor excitation time (p0346) was significantly reduced and the drive stalls when it is switched on and run immediately, p0346 should be increased again or quick magnetizing selected (p1401).  
 - check the current limits (p0640, r0067, r0289). If the current limits are too low, then the drive cannot be magnetized.  
 - check the current controller (p1715, p1717) and the speed adaptation controller (p1764, p1767). If the dynamic response was significantly reduced, then this should be increased again.  
 - If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased.

The following generally apply for closed-loop and torque control:

- Check whether the motor cables are disconnected.
- If the fault occurs with fault value 2 when the motor accelerates very quickly to the field weakening range, the deviation between the flux setpoint and flux actual value can be reduced and, in turn, the message prevented, by reducing p1596.

For separately-excited synchronous motors (closed-loop control with speed encoder), the following applies:

- check the speed signal (interrupted cable, polarity, pulse number).
- ensure the correct motor parameterization (rating plate and equivalent circuit diagram parameters).
- check the excitation equipment and the interface to the closed-loop control.
- encoder the highest possible dynamic response of the closed-loop excitation current control.
- check the speed control for any tendency to oscillate and if resonance effects occur, use a bandstop filter.
- do not exceed the maximum speed (p2162).

If there is no fault, then the delay time can be increased (p2178).

**A07903 Drive: Motor speed deviation**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The absolute value of the speed difference from the two setpoints (p2151, p2154) and the speed actual value (r2169) exceeds the tolerance threshold (p2163) longer than tolerated (p2164, p2166).

The alarm is only enabled for p2149.0 = 1.

Possible causes could be:

- the load torque is greater than the torque setpoint.
- when accelerating, the torque/current/power limit is reached. If the limits are not sufficient, then it is possible that the drive has been dimensioned too small.
- for closed-loop torque control, the speed setpoint does not track the speed actual value.
- for active Vdc controller.

For U/f control, the overload condition is detected as the I<sub>max</sub> controller is active.

See also: p2149 (Monitoring configuration)

**Remedy:**

- increase p2163 and/or p2166.
- increase the torque/current/power limits.
- for closed-loop torque control: The speed setpoint should track the speed actual value.
- de-activate alarm with p2149.0 = 0.

<b>Remedy:</b>	<p>For fault value = 1:</p> <ul style="list-style-type: none"> <li>- an armature short-circuit / voltage protection is only permissible for permanent-magnetic synchronous motors. The highest position of the motor type in p0300 must either be 2 or 4.</li> </ul> <p>For fault value = 101:</p> <ul style="list-style-type: none"> <li>- the contactor for the external armature short-circuit configuration should be controlled using output signal r1239.0. The signal can, e.g. be connected to an output terminal via binector input p0738. Before this fault can be acknowledged, p1231 must be set again.</li> </ul> <p>For fault value = 102:</p> <ul style="list-style-type: none"> <li>- if the external armature short-circuit with contactor feedback signal (p1231 = 1) is selected, this feedback signal must be connected to an input terminal (e.g. r722.x) and then connected to BI: p1235.</li> <li>- alternatively, the external armature short-circuit without contactor feedback signal (p1231 = 2) can be selected.</li> </ul> <p>For fault value = 103:</p> <ul style="list-style-type: none"> <li>- if the external armature short-circuit without contactor feedback signal (p1231 = 2) is selected, then a delay time must be parameterized in p1237. This time must always be greater than the actual contactor opening time, as otherwise the Motor Module would be short-circuited!</li> </ul>

For fault value = 201:

- a Motor Module with a higher maximum current or a motor with a lower short-circuit current must be used. The maximum Motor Module current must be higher than  $1.8 \times$  short-circuit current of the motor.

For fault value = 202:

- for internal voltage protection, use a Motor Module in booksize or chassis format.

For fault value = 203:

- for internal voltage protection, only use short-circuit proof motors.

For fault value = 204:

- The internal voltage protection must either be activated for all motor data sets with synchronous motors (p0300 = 2xx, 4xx) (p1231 = 3) or it must be de-activated for all motor data sets (p1231 not equal to 3). This therefore ensures that the protection cannot be accidentally withdrawn as a result of a data set changeover. The fault can only be acknowledged if this condition is fulfilled.

<b>A07927</b>	<b>DC braking active</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The motor is braked with DC current. DC braking is active. 1) A message with response DCBRK is active. The motor is braked with the braking current set in p1232 for the duration set in p1233. If the standstill threshold p1226 is undershot, then braking is prematurely canceled. 2) DC braking has been activated at binector input p1230 with the DC braking set (p1230 = 4). Braking current p1232 is injected until this binector input becomes inactive.
<b>Remedy:</b>	Not necessary. The alarm automatically disappears once DC braking has been executed.
<b>F07928</b>	<b>Internal voltage protection initiated</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal voltage protection is selected (p1231 = 3).
<b>Remedy:</b>	If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module automatically decides - using the DC link voltage - as to whether the armature short-circuit should be activated. The armature short-circuit is activated and response OFF2 is initiated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the armature short-circuit is withdrawn. If the motor is still in a critical speed range, the armature short-circuit is re-activated once the DC link voltage exceeds the threshold of 800 V. If the autonomous (independent) internal voltage protection is active (r1239.5 = 1) and the line supply returns (450 V < DC link voltage < 800 V), the armature short-circuit is withdrawn after 3 minutes.
<b>F07930</b>	<b>Drive: Brake control error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (NONE, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The Control Unit has detected a brake control error.

Fault value (r0949, interpret decimal):

10, 11: Fault in "open holding brake" operation.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1).

- Ground fault in brake cable.

20: Fault in "brake open" state.

- Short-circuit in brake winding.

30, 31: Fault in "close holding brake" operation.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1).

- Short-circuit in brake winding.

40: Fault in "brake closed" state.

50: Fault in the brake control circuit of the Control Unit or communication fault between Control Unit and Motor Module (brake control diagnostics).

80: When using the Safe Brake Adaptor (SBA), a fault has occurred in the brake control of the Control Unit.

90: Brake released for service purposes (X4).

Note:

The following causes may apply to fault values:

- motor cable is not shielded correctly.

- defect in control circuit of the Motor Module.

See also: p1278 (Brake control, diagnostics evaluation)

**Remedy:**

- check the motor holding brake connection.

- for a parallel connection, check the setting of the power unit data set to control the holding brake (p7015).

- check the function of the motor holding brake.

- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).

- replace the Motor Module involved.

Operation with Safe Brake Module:

- check the Safe Brake Modules connection.

- replace the Safe Brake Module.

Operation with Safe Brake Module (SBA):

- check the SBA connection and if required, replace the SBA.

See also: p1215 (Motor holding brake configuration), p1278 (Brake control, diagnostics evaluation)

---

**A07932 Brake does not close**

Message value:

-

Drive object:

VECTOR\_G

Reaction:

NONE

Acknowledge:

NONE

Cause:

This alarm is output for r1229.5 = 1.

For r1229.5 = 1, OFF1/OFF3 are suppressed to prevent the drive accelerating by a load that drives the motor - whereby OFF2 remains effective.

See also: p1217 (Motor holding brake closing time), r1229 (Motor holding brake status word)

Remedy:

- check the functionality of the motor holding brake.

- check the feedback signal (p1222).

<b>F07934 (N)</b>	<b>Drive: S120 Combi motor holding brake configuration</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE (OFF1, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>A connected motor holding brake has been detected with an S120 Combi. However, this brake has not been assigned to just one Combi feed drive and, therefore, brake control is not configured (correctly). It is also not permitted to assign the brake to the spindle.</p> <p>Fault value (r0949, interpret decimal):</p> <p>0: No motor holding brake is assigned (p1215 = 0 or 3 on all S120 Combi feed drives).</p> <p>1: More than one motor holding brake has been assigned (p1215 = 1 or 2 on more than one S120 Combi feed drive) - or there is more than one DRIVE-CLiQ motor with motor holding brake.</p> <p>2: Brake was accidentally assigned to the spindle (p1215 = 1); this is not permitted.</p> <p>3: An attempt was made to enable the function "Safe brake control" (SBC, p9602 = p9802 = 1) for the spindle. This is not permitted.</p>
<b>Remedy:</b>	<p>Check whether the motor holding brake has been assigned to one S120 Combi feed drive exclusively (p1215 = 1 or 2) and not the spindle.</p> <p>The fault will only be withdrawn once the motor holding brake has been assigned to just one of the S120 Combi feed drives and not the spindle (p1215 = 1 or 2 for this one drive). From this point, the motor holding brake will be controlled by this drive.</p> <p>See also: p1215 (Motor holding brake configuration)</p>
Reaction upon N:	NONE

**F07937 (N) Drive: Speed deviation between motor model and external speed**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** OFF2 (NONE, OFF1, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The absolute value of the speed difference from the two actual values (r2169, r1443) exceeds the tolerance threshold (p3236) for longer than permitted (p3238).  
Possible causes:  
- the interconnection or scaling of the external encoder signal is incorrect (p1440, p2000).  
- speed encoder for external encoder signal faulty.  
- encoder signal's polarity or gain incorrect.  
- smoothing time constant for model speed for monitoring too high (p2157).  
- smoothing time constant or threshold values for monitoring too low (p3236, p3238).  
See also: p2149 (Monitoring configuration)  
**Remedy:**  
- check that the external speed matches the motor speed (p1440, r1443).  
- check the polarity of the external speed (r1443).  
- check the interconnection of the connector input and the scaling of the signal (p1440, p2000).

**A07941 Sync-line-drive: Target frequency not permissible**

**Message value:** Parameter: %1  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The target frequency is outside the permissible value range.  
Alarm value (r2124, interpret decimal):  
1084: Target frequency greater than the positive speed limit,  $f_{sync} > f_{max}$  (r1084).  
1087: Target frequency less than the negative speed limit,  $f_{sync} < f_{min}$  (r1087).  
**Remedy:** Fulfill the conditions for the target frequency for line-drive synchronization.  
See also: r1084 (Speed limit positive effective), r1087 (Speed limit negative effective)

<b>A07942</b>	<b>Sync-line-drive: Setpoint frequency is completely different than the target frequency</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	There is a considerable difference between the setpoint frequency and the target frequency ( $f_{set} \neq f_{target}$ ). The deviation that can be tolerated is set in p3806.
<b>Remedy:</b>	The alarm automatically disappears after the difference that can be tolerated between the setpoint and target frequencies (p3806) is reached. See also: p3806 (Sync-line-drive frequency difference threshold value)
<b>A07943</b>	<b>Sync-line-drive: Synchronization not permitted</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	Synchronization is not permitted. Alarm value (r2124, interpret decimal): 1300: The control mode (p1300) has not been set to encoderless closed-loop speed control or U/f characteristic. 1910: Motor data identification activated. 1960: Speed controller optimization activated. 1990: Encoder adjustment activated. 3801: Voltage Sensing Module (VSM) not found. 3845: Friction characteristic record activated.
<b>Remedy:</b>	Fulfill the conditions for the line-drive synchronization. Re alarm value = 1300: Set the control mode (p1300) to encoderless closed-loop speed control (p1300 = 20) or U/f characteristic (p1300 = 0 ... 19). Re alarm value = 1910: Exit the motor data identification routine (p1910). Re alarm value = 1960: Exit the speed controller optimization routine (p1960). Re alarm value = 1990: Exit the encoder adjustment (p1990). Re alarm value = 3801: Connect the Voltage Sensing Module (VSM), assign it to the synchronizing drive (see p9910, p0151) and enter the drive object number of the synchronizing drive in p3801. When connecting the VSM to a neighboring drive object, ensure that the same current controller clock cycle p0115[0] exists as the one in the synchronizing drive. Re alarm value = 3845: Exit the friction characteristic record (p3845).
<b>F07950 (A)</b>	<b>Drive: Incorrect motor parameter</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	- the motor parameters were incorrectly entered while commissioning (e.g. p0300 = 0, no motor) - The braking resistor (p6811) has still not been parameterized - commissioning cannot be completed. Fault value (r0949, interpret decimal): Parameter number involved. The following motor parameters can be incorrect for fault value 307: p0304, p0305, p0307, p0308, p0309 See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0316, p0320, p0322, p0323
<b>Remedy:</b>	Compare the motor data with the rating plate data and if required, correct. See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0316, p0320, p0322, p0323
<b>Reaction upon A:</b>	NONE
<b>Acknowl. upon A:</b>	NONE

---

<b>F07955</b>	<b>Drive: Motor has been changed</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The code number of the actual motor with DRIVE-CLiQ does not match the saved number. Fault value (r0949, interpret decimal): Number of the incorrect parameter. See also: p0301 (Motor code number selection), r0302 (Motor code number of motor with DRIVE-CLiQ)
<b>Remedy:</b>	Connect the original motor, power up the Control Unit again (POWER ON) and exit quick commissioning with p0010 = 0. Or set p0300 = 10000 (load the parameters from the motor with DRIVE-CLiQ) and re-commission. Quick commissioning (p0010 = 1) is automatically exited with p3900 > 0. If quick commissioning was exited with p0010 = 0, then an automatic controller calculation (p0340 = 1) is not carried out.

---

<b>F07956 (A)</b>	<b>Drive: Motor code does not match the list (catalog) motor</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The motor code of the connected motor with DRIVE-CLiQ does not match the possible list motor types (see selection in p0300). The connected motor with DRIVE-CLiQ might not be supported by this firmware version. Fault value (r0949, interpret decimal): Motor code of the connected motor with DRIVE-CLiQ. Note: The first three digits of the motor code generally correspond to the list motor type.
<b>Remedy:</b>	Use a motor with DRIVE-CLiQ and the matching motor code.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

---

<b>A07960</b>	<b>Drive: Incorrect friction characteristic</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The friction characteristic is incorrect. Alarm value (r2124, interpret decimal): 1538: The friction torque is greater than the maximum from the upper effective torque limit (p1538) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value. 1539: The friction torque is less than the minimum from the lower effective torque limit (p1539) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value. 3820 ... 3829: Incorrect parameter number. The speeds entered in the parameters for the friction characteristic do not correspond to the following condition: $0.0 < p3820 < p3821 < \dots < p3829 \leq p0322$ or $p1082$ , if $p0322 = 0$ Therefore the output of the friction characteristic (r3841) is set to zero. 3830 ... 3839: Incorrect parameter number. The torques entered in the parameters for the friction characteristic do not correspond to the following condition: $0 \leq p3830, p3831 \dots p3839 \leq p0333$ Therefore the output of the friction characteristic (r3841) is set to zero. See also: r3840 (Friction characteristic, status word)
<b>Remedy:</b>	Fulfill the conditions for the friction characteristic. Re alarm value = 1538: Check the upper effective torque limit (e.g. in the field weakening range).

Re alarm value = 1539:

Check the lower effective torque limit (e.g. in the field weakening range).

Re alarm value = 3820 ... 3839:

Fulfill the conditions to set the parameters of the friction characteristic.

If the motor data (e.g. the maximum speed p0322) are changed during commissioning (p0010 = 1, 3), then the technological limits and threshold values, dependent on this, must be re-calculated by selecting p0340 = 5).

<b>A07961</b>	<b>Drive: Friction characteristic record activated</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The automatic friction characteristic record is activated. The friction characteristic is recorded at the next power-on command.
<b>Remedy:</b>	Not necessary. The alarm disappears automatically after the friction characteristic record has been successfully completed or the record is de-activated (p3845 = 0).
<b>F07963</b>	<b>Drive: Friction characteristic record interrupted</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The conditions to record the friction characteristic are not fulfilled. Fault value (r0949, interpret decimal): 0046: Missing enable signals (r0046). 1082: The highest speed value to be approached (p3829) is greater than the maximum speed (p1082). 1084: The highest speed value to be approached (p3829) is greater than the maximum speed (r1084, p1083, p1085). 1087: The highest speed value to be approached (p3829) is greater than the maximum speed (r1087, p1086, p1088). 1110: Friction characteristic record, negative direction selected (p3845) and negative direction inhibited (p1110). 1111: Friction characteristic record, positive direction selected (p3845) and positive direction inhibited (p1111). 1198: Friction characteristic record selected (p3845 > 0) and negative (p1110) and positive directions (p1111) inhibited (r1198). 1300: The control mode (p1300) has not been set to closed-loop speed control. 1755: For encoderless closed-loop control (p1300 = 20), the lowest speed value to be approached (p3820) is less than or equal to the changeover speed, open-loop controlled operation (p1755). 1910: Motor data identification activated. 1960: Speed controller optimization activated. 3820 ... 3829: Speed (p382x) cannot be approached. 3840: Friction characteristic incorrect. 3845: Friction characteristic record de-selected.
<b>Remedy:</b>	Fulfill the conditions to record the friction characteristic. Re fault value = 0046: - establish missing enable signals. Re fault value = 1082, 1084, 1087: - Select the highest speed value to be approached (p3829) less than or equal to the maximum speed (p1082, r1084, r1087). - Re-calculate the speed points along the friction characteristic (p0340 = 5). For fault value = 1110: - Select the friction characteristic record, positive direction (p3845). For fault value = 1111: - Select the friction characteristic record, negative direction (p3845). For fault value = 1198: - Enable the permitted direction (p1110, p1111, r1198). For fault value = 1300: - Set the control mode (p1300) on the closed-loop speed control (p1300 = 20, 21). For fault value = 1755: - For encoderless closed-loop speed control (p1300 = 20) select the lowest speed value to be approached (p3820) greater than the changeover speed of open-loop controlled operation (p1755). - Re-calculate the speed points along the friction characteristic (p0340 = 5).

- For fault value = 1910:  
- Exit the motor data identification routine (p1910).  
For fault value = 1960:  
- Exit the speed controller optimization routine (p1960).  
Re fault value 3820 ... 3829:  
- check the load at speed p382x.  
- check the speed signal (r0063) for oscillation at speed p382x. Check the settings of the speed controller if applicable.  
For fault value = 3840:  
- Make the friction characteristic error-free (p3820 ... p3829, p3830 ... p3839, p3840).  
For fault value = 3845:  
- Activate the friction characteristic record (p3845).

                      1: Current controller limited  
                      2: Motor shaft locked.  
                      4: Encoder speed signal not plausible.  
                      10: Stage 1: The ratio between the measured current and zero current is too low.  
                      11: Stage 2: The ratio between the measured current and zero current is too low.  
                      12: Stage 1: The maximum current was exceeded.  
                      13: Stage 2: The maximum current was exceeded.

- 14: Current difference to determine the +d axis too low.
- 15: Second harmonic too low.
- 16: Drive converter too small for the measuring technique.
- 17: Abort due to pulse inhibit.
- 18: First harmonic too low.
- 20: Pole position identification requested with the motor shaft rotating and activated "flying restart" function.

**Remedy:**

For fault value = 1:  
Check whether the motor is correctly connected.  
Check whether motor data have been correctly entered.  
Replace the Motor Module involved.

For fault value = 2:  
Open the motor holding brake (p1215 = 2) and bring the motor into a no-load condition.

For fault value = 4:  
Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.  
Check whether the motor pole pair number is correct (p0314).

For fault value = 10:  
When selecting p1980 = 4: Increase the value for p0325.  
When selecting p1980 = 1: Increase the value for p0329.  
Check whether the motor is correctly connected.  
Replace the Motor Module involved.

For fault value = 11:  
Increase the value for p0329.  
Check whether the motor is correctly connected.  
Replace the Motor Module involved.

For fault value = 12:  
When selecting p1980 = 4: Reduce the value for p0325.  
When selecting p1980 = 1: Reduce the value for p0329.  
Check whether motor data have been correctly entered.

For fault value = 13:  
Reduce the value for p0329.  
Check whether motor data have been correctly entered.

For fault value = 14:  
Increase the value for p0329.  
Motor not sufficiently anisotropic, change the technique (p1980 = 1 or 10).

For fault value = 15:  
Increase the value for p0325.  
Motor not sufficiently anisotropic, change the technique (p1980 = 1 or 10).

For fault value = 16:  
De-activate technique (p1982).

For fault value = 17:  
Repeat technique.

For fault value = 18:  
Increase the value for p0329.  
Saturation not sufficient, change the technique (p1980 = 10).

For fault value = 20:  
Before carrying out a pole position identification routine ensure that the motor shaft is absolutely stationary (zero speed).

**F07970**

**Drive: Automatic encoder adjustment incorrect**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2 (NONE)

**Acknowledge:** IMMEDIATELY

**Cause:** A fault has occurred during the automatic encoder adjustment.

Fault value (r0949, interpret decimal):

- 1: Current controller limited
- 2: Motor shaft locked.
- 4: Encoder speed signal not plausible.
- 5: Deselect U/f (p1300) or deactivate encoder calibration (p1990).
- 10: Stage 1: The ratio between the measured current and zero current is too low.
- 11: Stage 2: The ratio between the measured current and zero current is too low.
- 12: Stage 1: The maximum current was exceeded.

- 13: Stage 2: The maximum current was exceeded.
- 14: Current difference to determine the +d axis too low.
- 15: Second harmonic too low.
- 16: Drive converter too small for the measuring technique.
- 17: Abort due to pulse inhibit.

**Remedy:**

For fault value = 1:  
 Check whether the motor is correctly connected.  
 Check whether motor data have been correctly entered.  
 Replace the power unit involved.

For fault value = 2:  
 Open the motor holding brake (p1215 = 2) and bring the motor into a no-load condition.

For fault value = 4:  
 Check whether the speed actual value inversion is correct (p0410.0).  
 Check whether the motor is correctly connected.  
 Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.  
 Check whether the motor pole pair number is correct (p0314).

For fault value = 5:  
 Deselect U/f (p1300) or deactivate encoder calibration (p1990).

For fault value = 10:  
 Increase the value for p0325.  
 Check whether the motor is correctly connected.  
 Replace the power unit involved.

For fault value = 11:  
 Increase the value for p0329.  
 Check whether the motor is correctly connected.  
 Replace the power unit involved.

For fault value = 12:  
 Reduce the value for p0325.  
 Check whether motor data have been correctly entered.

For fault value = 13:  
 Reduce the value for p0329.  
 Check whether motor data have been correctly entered.

For fault value = 14:  
 Increase the value for p0329.

For fault value = 15:  
 Increase the value for p0325.

For fault value = 16:  
 De-activate technique (p1982).

For fault value = 17:  
 Repeat technique.

**A07971 (N) Drive: Angular commutation offset determination activated**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The automatic determination of the angular commutation offset (encoder adjustment) is activated (p1990 = 1,3).  
 The automatic determination is carried out at the next power-on command.  
 See also: p1990 (Encoder adjustment, determine angular commutation offset)

**Remedy:** Not necessary.  
 The alarm automatically disappears after determination or for the setting p1990 = 0.

Reaction upon N: NONE

Acknowled. upon N: NONE

<b>A07975 (N)</b>	<b>Drive: Travel to the zero mark - setpoint input expected</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The zero mark must be evaluated in order to adjust the encoder. It is expected that a speed or torque setpoint is entered. See also: p1990 (Encoder adjustment, determine angular commutation offset)
<b>Remedy:</b>	Not necessary. The alarm disappears once the zero mark has been detected.
Reaction upon N:	NONE
Acknowl. upon N:	NONE
<b>A07976</b>	<b>Drive: Fine encoder calibration activated</b>
<b>Message value:</b>	Parameter: %1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The alarm indicates the phases of the fine encoder calibration using an alarm value. Alarm value (interpret decimal): 1: Fine encoder calibration active. 2: Rotating measurement started (set the setpoint speed > 40 % rated motor speed) 3: Rotating measurement lies within the speed and torque range. 4: Rotating measurement successful: pulse inhibit can be initiated to accept the values. 5: Fine encoder calibration is calculated. 10: Speed too low, rotating measurement interrupted. 12: Torque too high, rotating measurement interrupted. See also: p1905 (Parameter tuning selection)
<b>Remedy:</b>	Re alarm value = 10: Increase the speed. Re alarm value = 12: Bring the drive into a no-load condition.
<b>A07980</b>	<b>Drive: Rotating measurement activated</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The rotating measurement (automatic speed controller optimization) is activated. The rotating measurement is carried out at the next power-on command. See also: p1960 (Rotating measurement selection)
<b>Remedy:</b>	Not necessary. The alarm disappears automatically after the speed controller optimization has been successfully completed or for the setting p1900 = 0.
<b>A07981</b>	<b>Drive: Enable signals for the rotating measurement missing</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The rotating measurement cannot be started due to missing enable signals.
<b>Remedy:</b>	- acknowledge faults that are present. - establish missing enable signals. See also: r0002, r0046

**F07983 Drive: Rotating measurement saturation characteristic**

<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (NONE, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>A fault has occurred while determining the saturation characteristic.</p> <p>Fault value (r0949, interpret decimal):</p> <ol style="list-style-type: none"><li>1: The speed did not reach a steady-state condition.</li><li>2: The rotor flux did not reach a steady-state condition.</li><li>3: The adaptation circuit did not reach a steady-state condition.</li><li>4: The adaptation circuit was not enabled.</li><li>5: Field weakening active.</li><li>6: The speed setpoint was not able to be approached as the minimum limiting is active.</li><li>7: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.</li><li>8: The speed setpoint was not able to be approached as the maximum limiting is active.</li><li>9: Several values of the determined saturation characteristic are not plausible.</li><li>10: Saturation characteristic could not be sensibly determined because load torque too high.</li></ol>

**Remedy:**

For fault value = 1:

- the total drive moment of inertia is far higher than that of the motor (p0341, p0342). De-select rotating measurement (p1960), enter the moment of inertia p0342, re-calculate the speed controller p0340 = 4 and repeat the measurement.

Re fault value = 1 ... 2:

- increase the measuring speed (p1961) and repeat the measurement.

Re fault value = 1 ... 4:

- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

For fault value = 5:

- the speed setpoint (p1961) is too high. Reduce the speed.

For fault value = 6:

- adapt the speed setpoint (p1961) or minimum limiting (p1080).

For fault value = 7:

- adapt the speed setpoint (p1961) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

For fault value = 8:

- adapt the speed setpoint (p1961) or maximum limit (p1082, p1083 and p1086).

Re fault value = 9, 10:

- the measurement was carried out at an operating point where the load torque is too high. Select a more suitable operating point, either by changing the speed setpoint (p1961) or by reducing the load torque. The load torque may not be varied while making measurements.

Note:

The saturation characteristic identification routine can be disabled using p1959.1.  
See also: p1959 (Rotating measurement configuration)

---

**F07984 Drive: Speed controller optimization, moment of inertia**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (NONE, OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:**

A fault has occurred while identifying the moment of inertia.  
Fault value (r0949, interpret decimal):

- 1: The speed did not reach a steady-state condition.
- 2: The speed setpoint was not able to be approached as the minimum limiting is active.
- 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
- 4: The speed setpoint was not able to be approached as the maximum limiting is active.
- 5: It is not possible to increase the speed by 10% as the minimum limiting is active.
- 6: It is not possible to increase the speed by 10% as the suppression (skip) bandwidth is active.
- 7: It is not possible to increase the speed by 10% as the maximum limiting is active.
- 8: The torque difference after the speed setpoint step is too low in order to be able to still reliably identify the moment of inertia.
- 9: Too few data to be able to reliably identify the moment of inertia.
- 10: After the setpoint step, the speed either changed too little or in the incorrect direction.
- 11: The identified moment of inertia is not plausible.

**Remedy:**

For fault value = 1:

- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 2, 5:

- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).

Re fault value = 3, 6:

- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 4, 7:

- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).

For fault value = 8:

- the total drive moment of inertia is far higher than that of the motor (refer to p0341, p0342). De-select rotating measurement (p1960), enter the moment of inertia p0342, re-calculate the speed controller p0340 = 4 and repeat the measurement.

For fault value = 9:  
 - check the moment of inertia (p0341, p0342). After the change, re-calculate (p0340 = 3 or 4).  
 For fault value = 10:  
 - check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.  
 Note:  
 The moment of inertia identification routine can be disabled using p1959.2.  
 See also: p1959 (Rotating measurement configuration)

<b>F07985</b>	<b>Drive: Speed controller optimization (oscillation test)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (NONE, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A fault has occurred during the vibration test. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The speed setpoint was not able to be approached as the minimum limiting is active. 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 4: The speed setpoint was not able to be approached as the maximum limiting is active. 5: Torque limits too low for a torque step. 6: No suitable speed controller setting was found.
<b>Remedy:</b>	For fault value = 1: - check the motor parameters (rating plate data). After the change: Calculate p0340 = 3. - check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3. - carry out a motor data identification routine (p1910). - if required, reduce the dynamic factor (p1967 < 25 %). For fault value = 2: - adapt the speed setpoint (p1965) or adapt the minimum limit (p1080). For fault value = 3: - adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101). For fault value = 4: - adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086). For fault value = 5: - increase the torque limits (e.g. p1520, p1521). For fault value = 6: - reduce the dynamic factor (p1967). - disable the vibration test (p1959.4 = 0) and repeat the rotating measurement. See also: p1959 (Rotating measurement configuration)

<b>F07986</b>	<b>Drive: Rotating measurement ramp-function generator</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (NONE, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	During the rotating measurements, problems with the ramp-function generator occurred. Fault value (r0949, interpret decimal): 1: The positive and negative directions are inhibited.
<b>Remedy:</b>	For fault value = 1: Enable the direction (p1110 or p1111).

<b>A07987</b>	<b>Drive: Rotating measurement, no encoder available</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	No encoder available. The rotating measurement was carried out without encoder.
<b>Remedy:</b>	Connect encoder or select p1960 = 1, 3.

<b>F07988</b>	<b>Drive: Rotating measurement, no configuration selected</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (NONE, OFF1)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	When configuring the rotating measurement (p1959), no function was selected.
<b>Remedy:</b>	Select at least one function for automatic optimization of the speed controller (p1959). See also: p1959 (Rotating measurement configuration)
<b>F07989</b>	<b>Drive: Rotating measurement leakage inductance (q-axis)</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (NONE, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An error has occurred while measuring the dynamic leakage inductance. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The speed setpoint was not able to be approached as the minimum limiting is active. 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 4: The speed setpoint was not able to be approached as the maximum limiting is active. 5: The 100% flux setpoint was not reached. 6: No Lq measurement possible because field weakening is active. 7: Speed actual value exceeds the maximum speed p1082 or 75% of the rated motor speed. 8: Speed actual value is below 2 % of the rated motor speed.
<b>Remedy:</b>	For fault value = 1: - check the motor parameters. - carry out a motor data identification routine (p1910). - if required, reduce the dynamic factor (p1967 < 25 %). For fault value = 2: - adapt the speed setpoint (p1965) or adapt the minimum limit (p1080). For fault value = 3: - adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101). For fault value = 4: - adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086). For fault value = 5: - flux setpoint p1570 = 100 % and current setpoint p1610 = 0 % kept during the Lq measurement. For fault value = 6: - reduce the regenerative load so that the drive does not reach field weakening when accelerating. - reduce p1965 so that the q leakage inductance is recorded at lower speeds. For fault value = 7: - increase p1082 if this is technically permissible. - reduce p1965 so that the q leakage inductance is recorded at lower speeds. For fault value = 8: - reduce the load when motoring so that the drive is not braked. - increase p1965 so that the measurement may be taken at higher speeds. Note: The measurement of the q leakage inductance can be disabled using p1959.5. If only p1959.5 is set, then only this measurement is carried out if p1960 is set to 1, 2 and the drive is powered up. See also: p1959 (Rotating measurement configuration)
<b>F07990</b>	<b>Drive: Incorrect motor data identification</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2 (NONE, OFF1)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A fault has occurred during the identification routine. Fault value (r0949, interpret decimal): 1: Current limit value reached. 2: Identified stator resistance lies outside the expected range 0.1 ... 100% of Zn.

- 3: Identified rotor resistance lies outside the expected range 0.1 ... 100% of  $Z_n$ . Separately excited synchronous motors: damping resistance outside 1.0 ... 15 % of  $Z_n$ .
- 4: Identified stator reactance lies outside the expected range 50 ... 900 % of  $Z_n$ . Separately excited synchronous motors: stator reactance outside 20 ... 500 % of  $Z_n$ .
- 5: Identified magnetizing reactance lies outside the expected range 50 ... 900 % of  $Z_n$ . Separately excited synchronous motors: magnetizing reactance outside 20 ... 500 % of  $Z_n$ .
- 6: Identified rotor time constant lies outside the expected range 10 ms ... 5 s. Separately-excited synchronous motors: damping time constant outside of 5 ms ... 1 s.
- 7: Identified total leakage reactance lies outside the expected range 4 ... 100 % of  $Z_n$ .
- 8: Identified stator leakage reactance lies outside the expected range 2 ... 50% of  $Z_n$ . Separately excited synchronous motors: stator leakage reactance outside 2 ... 40 % of  $Z_n$ .
- 9: Identified rotor leakage reactance lies outside the expected range 2 ... 50% of  $Z_n$ . Separately excited synchronous motors: damping leakage reactance outside 1.5 ... 20 % of  $Z_n$ .
- 10: Motor has been incorrectly connected.
- 11: Motor shaft rotates.
- 12: Ground fault detected.
- 20: Identified threshold voltage of the semiconductor devices lies outside the expected range 0 ... 10 V.
- 30: Current controller in voltage limiting.
- 40: At least one identification contains errors. The identified parameters are not saved to prevent inconsistencies.
- 50: The selected sampling time is too low for the motor identification (p0115[0]).

Note:

Percentage values are referred to the rated motor impedance:

$Z_n = V_{mot,nom} / \sqrt{3} / I_{mot,nom}$

**Remedy:**

Re fault value = 1 ... 40:

- check whether motor data have been correctly entered in p0300, p0304 ... p0311.
- is there an appropriate relationship between the motor power rating and that of the Motor Module? The ratio of the Motor Module to the rated motor current should not be less than 0.5 and not be greater than 4.
- check configuration (star-delta).

Re fault value = 11 in addition:

- Deactivate oscillation monitoring (p1909.7 = 1).

For fault value = 2:

- for parallel circuits, check the motor winding system in p7003. If, for power units connected in parallel, a motor is specified with a single-winding system (p7003 = 0), although a multi-winding system is being used, then a large proportion of the stator resistance is interpreted as feeder cable resistance and entered in p0352.

Re fault value = 4, 7:

- check whether inductances are correctly set in p0233 and p0353.
- check whether motor has been correctly connected (star-delta).
- Set p1909.0 = 1.

For fault value = 12:

- check the power cable connections.
- check the motor.
- check the CT.

For fault value = 50:

- Perform a motor data identification with a higher sampling time, and after this, change to the required higher sampling time (p0115[0]).

**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The drive unit did not accept the receive configuration data.  
Alarm value (r2124, interpret decimal):  
Return value of the receive configuration data check.  
1: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence are defined in p0978.  
2: Too many PZD data words for output or input to a drive object. The number of possible PZD items in a drive object is determined by the number of indices in r2050/p2051 for PZD IF1, and in r8850/p8851 for PZD IF2.  
3: Uneven number of bytes for input or output.  
4: Setting data for synchronization not accepted. For more information, see A01902.  
5: Cyclic operation not active.  
17: CBE20 Shared Device: Configuration of the F-CPU has been changed.  
223: Illegal clock synchronization for the PZD interface set in p8815[0].  
500: Illegal PROFIsafe configuration for the interface set in p8815[1].  
501: PROFIsafe parameter error (e.g. F\_dest).  
503: PROFIsafe connection is rejected as long as there is no isochronous connection (p8969).  
Additional values:  
Only for internal Siemens troubleshooting.  
**Remedy:** Check the receive configuration data.  
Re alarm value = 1, 2:  
- Check the list of the drive objects with process data exchange (p0978). With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange.  
Re alarm value = 2:  
- Check the number of data words for output and input to a drive object.  
Re alarm value = 17:  
- CBE20 Shared Device: Unplug/plug A-CPU.  
Re alarm value = 223, 500:  
- Check the setting in p8839 and p8815.  
- Ensure that only one PZD interface is operated in clock synchronism or with PROFIsafe.  
Re alarm value = 501:  
- Check the set PROFIsafe address (p9610).

**F08700 (A)      CAN: Communications error**

**Message value:** %1

**Drive object:** All objects

**Reaction:** Infeed: NONE (OFF1, OFF2)  
Vector: OFF3 (NONE, OFF1, OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:** A CAN communications error has occurred.

Fault value (r0949, interpret decimal):

1: The error counter for the send telegrams has exceeded the BUS OFF value 255. The bus disables the CAN controller.

- bus cable short circuit.
- incorrect baud rate.
- incorrect bit timing.

2: The master no longer interrogated the CAN node status longer than for its "life time". The "life time" is obtained from the "guard time" (p8604[0]) multiplied by the "life time factor" (p8604[1]).

- bus cable interrupted.
- bus cable not connected.
- incorrect baud rate.
- incorrect bit timing.
- master fault.

<p>Note: The fault response can be set as required using p8641. See also: p8604 (CAN node guarding), p8641 (CAN Abort Connection Option Code)</p>	
<b>Remedy:</b>	<ul style="list-style-type: none"> <li>- check the bus cable</li> <li>- check the baud rate (p8622).</li> <li>- check the bit timing (p8623).</li> <li>- check the master.</li> </ul> <p>The CAN controller must be manually restarted with p8608 = 1 after the cause of the fault has been resolved! See also: p8608 (CAN Clear Bus Off Error), p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)</p>

<b>A08751</b>	<b>CAN: Telegram loss</b>
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The CAN controller has lost a receive message (telegram).
Remedy:	Reduce the cycle times of the receive messages.

---

<b>A08752</b>	<b>CAN: Error counter for error passive exceeded</b>
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The error counter for the send or receive telegrams has exceeded the value 127.
Remedy:	<ul style="list-style-type: none"><li>- check the bus cable</li><li>- set a higher baud rate (p8622).</li><li>- check the bit timing and if required optimize (p8623).</li></ul> See also: p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)

---

<b>A08753</b>	<b>CAN: Message buffer overflow</b>
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A message buffer overflow. Alarm value (r2124, interpret decimal): 1: Non-cyclic send buffer (SDO response buffer) overflow. 2: Non-cyclic receive buffer (SDO receive buffer) overflow. 3: Cyclic send buffer (PDO send buffer) overflow.
Remedy:	<ul style="list-style-type: none"><li>- check the bus cable.</li><li>- set a higher baud rate (p8622).</li><li>- check the bit timing and if required optimize (p8623).</li></ul> Re alarm value = 2: <ul style="list-style-type: none"><li>- reduce the cycle times of the SDO receive messages.</li><li>- SDO request from master only after SDO feedback for previous SDO request.</li></ul> See also: p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)

---

<b>A08754</b>	<b>CAN: Incorrect communications mode</b>
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the "operational" mode, an attempt was made to change parameters p8700 ... p8737.
Remedy:	Change to the "pre-operational" or "stopped" mode.

---

<b>A08755</b>	<b>CAN: Obj cannot be mapped</b>
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The CANopen object is not provided for the Process Data Object (PDO) Mapping.
Remedy:	Use a CANopen object intended for the PDO mapping or enter 0. The following objects can be mapped in the Receive Process Data Object (RPDO) or Transmit Process Data Object (TPDO): <ul style="list-style-type: none"><li>- RPDO: 6040 hex, 6060 hex, 60FF hex, 6071 hex; 5800 hex - 580F hex; 5820 hex - 5827 hex</li></ul>

---

- TPDO: 6041 hex, 6061 hex, 6063 hex, 6069 hex, 606B hex, 606C hex, 6074 hex; 5810 hex - 581F hex; 5830 hex - 5837 hex  
Only sub-index 0 of the specified objects can be mapped.  
Note:  
As long as A08755 is present, the COB-ID cannot be set to valid.

<b>A08756</b>	<b>CAN: Number of mapped bytes exceeded</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The number of bytes of the mapped objects exceeds the telegram size for net data. A max. of 8 bytes is permissible.
<b>Remedy:</b>	Map fewer objects or objects with a smaller data type. See also: p8710, p8711, p8712, p8713, p8714, p8715, p8716, p8717, p8730, p8731, p8732, p8733, p8734, p8735, p8736, p8737
<b>A08757</b>	<b>CAN: Set COB-ID invalid</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	For online operation, the appropriate COB-ID must be set invalid before mapping. Example: Mapping for RPDO 1 should be changed (p8710[0]). --> set p8700[0] = C00006E0 hex (invalid COB-ID) --> set p8710[0] as required. --> p8700[0] enter a valid COB-ID
<b>Remedy:</b>	Set the COB-ID to invalid.
<b>A08758</b>	<b>CAN: Number of PDO channels too low</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The number of PDO channels in p8740 has either been set to 0 or too low. See also: p8740 (CAN channel distribution)
<b>Remedy:</b>	The number of channels set in p8740 must be greater than or equal to the number of PDOs. There are 2 possibilities: Increase the number of channels in p8740 and confirm the selection using p8741. Reduce the number of PDOs by setting the COB-ID to invalid. See also: p8740 (CAN channel distribution), p8741 (CAN PDO configuration acknowledgement)
<b>A08759</b>	<b>CAN: PDO COB-ID already available</b>
<b>Message value:</b>	-
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	An existing PDO COB-ID was allocated.
<b>Remedy:</b>	Select another PDO COB-ID.
<b>A08800</b>	<b>PROFInergy energy-saving mode active</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The PROFInergy energy-saving mode is active

Alarm value (r2124, interpret decimal):  
Mode ID of the active PROFlenergy energy-saving mode.  
See also: r5600 (Pe energy saving mode ID)

**Remedy:** The alarm automatically disappears when the energy-saving mode is exited.  
Note:  
After receiving the PROFlenergy command "End\_Pause" via PROFINET, the energy-saving mode is exited.

---

**A08802      PROFlenergy not possible to switch off incremental encoder supply**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The incremental encoder is used for the closed-loop position control. This means that its power supply cannot be switched off during the PROFlenergy energy-saving mode, otherwise it would lose its position actual value.  
Alarm value (r2124, interpret decimal):  
Encoder number

**Remedy:** The alarm automatically disappears when the energy-saving mode is exited.  
Note:  
After receiving the PROFlenergy command "End\_Pause" via PROFINET, the energy-saving mode is exited.

---

**A13000      License not adequate**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** - for the drive unit, the options that require a license are being used but the licenses are not sufficient.  
- an error occurred when checking the existing licenses.  
Alarm value (r2124, interpret decimal):  
0:  
The existing license is not sufficient.  
1:  
An adequate license was not able to be determined as the memory card with the required licensing data was withdrawn in operation.  
2:  
An adequate license was not able to be determined as there is no licensing data available on the memory card.  
3:  
An adequate license was not able to be determined as there is a checksum error in the license key.  
4:  
An internal error occurred when checking the license.

**Remedy:** Re alarm value = 0:  
Additional licenses are required and these must be activated (p9920, p9921).  
Re alarm value = 1:  
With the system powered down, re-insert the memory card that matches the system.  
Re alarm value = 2:  
Enter and activate the license key (p9920, p9921).  
Re alarm value = 3:  
Compare the license key (p9920) entered with the license key on the certificate of license.  
Re-enter the license key and activate (p9920, p9921).  
Re alarm value = 4:  
- carry out a POWER ON.  
- upgrade firmware to later version.  
- contact the Hotline.

---

**A13001      Error in license checksum**

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When checking the checksum of the license key, an error was detected.

**Remedy:** Compare the license key (p9920) entered with the license key on the certificate of license.  
Re-enter the license key and activate (p9920, p9921).

---

**F13009 Licensing OA application not licensed**

**Message value:** %1

**Drive object:** All objects

**Reaction:** OFF1

**Acknowledge:** IMMEDIATELY

**Cause:** At least one OA application which is under license does not have a license.

**Note:**

Refer to r4955 and p4955 for information about the installed OA applications.

**Remedy:** - enter and activate the license key for OA applications under license (p9920, p9921).

- if necessary, de-activate unlicensed OA applications (p4956).

See also: p9920 (Licensing, enter license key), p9921 (Licensing, activate license key)

---

**F13010 Licensing function module not licensed**

**Message value:** %1

**Drive object:** All objects

**Reaction:** OFF1

**Acknowledge:** IMMEDIATELY

**Cause:** At least one function module which is under license does not have a license.

Fault value (r0949, interpret hexadecimal):

Bit x = 1: The corresponding function module does not have a license.

**Note:**

Refer to p0108 or r0108 for the assignment between the bit number and function module.

**Remedy:** - enter and activate the license key for function modules under license (p9920, p9921).

- if necessary, de-activate unlicensed function modules (p0108, r0108).

See also: p9920 (Licensing, enter license key), p9921 (Licensing, activate license key)

---

**F13100 Know-how protection: Copy protection error**

**Message value:** %1

**Drive object:** All objects

**Reaction:** OFF1

**Acknowledge:** IMMEDIATELY

**Cause:** The know-how protection with copy protection for the memory card is active.

An error has occurred when checking the memory card.

Fault value (r0949, interpret decimal):

0: A memory card is not inserted.

2: An invalid memory card is inserted.

3: The memory card is being used in another Control Unit.

12: An invalid memory card is inserted (OEM input incorrect, p7769).

13: The memory card is being used in another Control Unit (OEM input incorrect, p7759).

See also: p7765 (KHP memory card copy protection)

**Remedy:** For fault value = 0:

- Insert the correct memory card and carry out POWER ON.

Re fault value = 2, 3, 12, 13:

- contact the responsible OEM.

- Deactivate copy protection (p7765) and acknowledge the fault (p3981).

- Deactivate know-how protection (p7766-p7768) and acknowledge the fault (p3981).

**Note:**

In general, the copy protection can only be changed when know-how protection is deactivated.

KHP: Know-How Protection

See also: p3981 (Faults, acknowledge drive object), p7765 (KHP memory card copy protection)

---

<b>F13101</b>	<b>Know-how protection: Copy protection cannot be activated</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An error occurred when attempting to activate the copy protection for the memory card. Fault value (r0949, interpret decimal): 0: A memory card is not inserted. Note: KHP: Know-How Protection
<b>Remedy:</b>	- insert the memory card and carry out POWER ON. - Try to activate copy protection again (p7765). See also: p7765 (KHP memory card copy protection)

---

<b>F13102</b>	<b>Know-how protection: Consistency error of the protected data</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF1
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	An error was identified when checking the consistency of the protected files. As a consequence, the project on the memory card cannot be run. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex: yyyy = object number, xxxx = fault cause xxxx = 1: A file has a checksum error. xxxx = 2: The files are not consistent with one another. Note: KHP: Know-How Protection
<b>Remedy:</b>	- Replace the project on the memory card. - Restore the factory setting and download again.

---

<b>F30001</b>	<b>Power unit: Overcurrent</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The power unit has detected an overcurrent condition. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - U/f operation: Up ramp set too low. - U/f operation: Rated motor current is significantly greater than that of the Motor Module. - infeed: High discharge and post-charging currents for voltage dip. - infeed: High post-charging currents for overload when motoring and DC link voltage dip. - infeed: Short-circuit currents at power-up due to the missing line reactor. - power cables are not correctly connected. - the power cables exceed the maximum permissible length. - power unit defective. - line phase interrupted. Additional causes for a parallel switching device (r0108.15 = 1): - a power unit has tripped (powered down) due to a ground fault. - the closed-loop circulating current control is either too slow or has been set too fast. Fault value (r0949, interpret bitwise binary): Bit 0: Phase U. Bit 1: Phase V. Bit 2: Phase W. Bit 3: Overcurrent in the DC link. Note: Fault value = 0 means that the phase with overcurrent is not recognized (e.g. for blocksize device).

---

- Remedy:**
- check the motor data - if required, carry out commissioning.
  - check the motor circuit configuration (star/delta).
  - U/f operation: Increase up ramp.
  - U/f operation: Check the assignment of the rated currents of the motor and Motor Module.
  - infeed: Check the line supply quality.
  - infeed: Reduce the motor load.
  - infeed: Check the correct connection of the line filter and the line commutating reactor.
  - check the power cable connections.
  - check the power cables for short-circuit or ground fault.
  - check the length of the power cables.
  - replace power unit.
  - check the line supply phases.
- For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
  - check the setting of the closed-loop circulating current control (p7036, p7037).

---

**F30002 Power unit: DC link voltage, overvoltage**

- Message value:** %1
- Drive object:** B\_INF
- Reaction:** OFF2
- Acknowledge:** IMMEDIATELY
- Cause:** The power unit has detected overvoltage in the DC link.
- motor regenerates too much energy.
  - device connection voltage too high.
  - when operating with a Voltage Sensing Module (VSM), the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
  - line phase interrupted.
- Fault value (r0949, interpret decimal):  
DC link voltage at the time of trip [0.1 V].
- Remedy:**
- increase the ramp-down time
  - activate the DC link voltage controller
  - use a brake resistor or Active Line Module
  - increase the current limit of the infeed or use a larger module (for the Active Line Module)
  - check the device supply voltage
  - check and correct the phase assignment at the VSM and at the power unit
  - check the line supply phases.
- See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)

---

**F30002 Power unit: DC link voltage, overvoltage**

- Message value:** %1
- Drive object:** VECTOR\_G
- Reaction:** OFF2
- Acknowledge:** IMMEDIATELY
- Cause:** The power unit has detected overvoltage in the DC link.
- motor regenerates too much energy.
  - device connection voltage too high.
  - when operating with a Voltage Sensing Module (VSM), the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
  - line phase interrupted.
- Fault value (r0949, interpret decimal):  
DC link voltage at the time of trip [0.1 V].
- Remedy:**
- increase the ramp-down time
  - activate the DC link voltage controller
  - use a brake resistor or Active Line Module
  - increase the current limit of the infeed or use a larger module (for the Active Line Module)
  - check the device supply voltage
  - check and correct the phase assignment at the VSM and at the power unit
  - check the line supply phases.
  - set the rounding times (p1130, p1136). This is particularly recommended in U/f operation to relieve the DC link voltage controller with rapid ramp-down times of the ramp-function generator.
- See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)

---

**F30003      Power unit: DC link voltage, undervoltage**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The power unit has detected an undervoltage condition in the DC link.  
- line supply failure  
- line supply voltage below the permissible value.  
- line supply infeed failed or interrupted.  
- line phase interrupted.  
**Note:**  
The monitoring threshold for undervoltage in the DC link is indicated in r0296.  
**Remedy:** - check the line supply voltage  
- check the line supply infeed and observe the fault messages relating to it (if there are any)  
- check the line supply phases.  
- check the line supply voltage setting (p0210).  
- booksize units: check the setting of p0278.  
**Note:**  
The ready signal for the infeed (r0863) must be interconnected to the associated drive inputs (p0864).  
See also: p0210 (Drive unit line supply voltage)

---

**F30004      Power unit: Overtemperature heat sink AC inverter**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The temperature of the power unit heat sink has exceeded the permissible limit value.  
- insufficient cooling, fan failure.  
- overload.  
- ambient temperature too high.  
- pulse frequency too high.  
Fault value (r0949):  
Temperature [1 bit = 0.01 °C].  
**Remedy:** - check whether the fan is running.  
- check the fan elements.  
- check whether the ambient temperature is in the permissible range.  
- check the motor load.  
- reduce the pulse frequency if this is higher than the rated pulse frequency.  
**Notice:**  
This fault can only be acknowledged after this alarm threshold for alarm A05000 has been undershot.  
See also: p1800 (Pulse frequency setpoint)

---

**F30005      Power unit: Overload I2t**

**Message value:** %1  
**Drive object:** B\_INF  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The power unit was overloaded (r0036 = 100 %).  
- the permissible rated power unit current was exceeded for an inadmissibly long time.  
- the permissible load duty cycle was not maintained.  
Fault value (r0949, interpret decimal):  
I2t [100 % = 16384].  
**Remedy:** - reduce the continuous load.  
- adapt the load duty cycle.  
- check the motor and power unit rated currents.  
See also: r0036 (Power unit overload I2t), r0206 (Rated power unit power), p0307 (Rated motor power)

<b>F30005</b>	<b>Power unit: Overload I2t</b>
<b>Message value:</b>	%1

### **F30015 (N, A) Power unit: Phase failure motor cable**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** OFF2 (NONE, OFF1, OFF3)

**Acknowledge:** IMMEDIATELY

**Cause:** A phase failure in the motor feeder cable was detected.

The signal can also be output in the following cases:

- The motor is correctly connected, but the drive has stalled in U/f control. In this case, a current of 0 A is possibly measured in one phase due to asymmetry of the currents.
- the motor is correctly connected, however the closed-speed control is instable and therefore an oscillating torque is generated.

Note:

Chassis power units do not feature phase failure monitoring.

**Remedy:**

- check the motor feeder cables.
- increase the ramp-up or ramp-down time (p1120) if the drive has stalled in U/f control.
- check the speed controller settings.

Reaction upon N: NONE

Acknowl. upon N: NONE

Reaction upon A: NONE

Acknowl. upon A: NONE

---

### **A30016 (N) Power unit: Load supply switched out**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The DC link voltage is too low.

Alarm value (r2124, interpret decimal):

DC link voltage at the time of trip [0.1 V].

**Remedy:**

- switch on load supply.
- check the line supply if necessary.

Reaction upon N: NONE

Acknowl. upon N: NONE

---

### **F30017 Power unit: Hardware current limit has responded too often**

**Message value:** Fault cause: %1 bin

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** The hardware current limitation in the relevant phase (see A30031, A30032, A30033) has responded too often. The number of times the limit has been exceeded depends on the design and type of power unit.

For infeed units, the following applies:

- closed-loop control is incorrectly parameterized.
- load on the infeed is too high.
- Voltage Sensing Module incorrectly connected.

- line reactor missing or the incorrect type.
  - power unit defective.
- The following applies to Motor Modules:
- closed-loop control is incorrectly parameterized.
  - fault in the motor or in the power cables.
  - the power cables exceed the maximum permissible length.
  - motor load too high
  - power unit defective.
- Fault value (r0949, interpret binary):
- Bit 0: Phase U
- Bit 1: Phase V
- Bit 2: Phase W

**Remedy:**

- For infeed units, the following applies:
- check the controller settings and reset and identify the controller if necessary (p0340 = 2, p3410 = 5)
  - reduce the load and increase the DC-link capacitance or use a higher-rating infeed if necessary
  - check the connection of the optional Voltage Sensing Module
  - check the connection and technical data of the line reactor
  - check the power cables for short-circuit or ground fault.
  - replace power unit.
- The following applies to Motor Modules:
- check the motor data and if required, recalculate the controller parameters (p0340 = 3). As an alternative, run a motor data identification (p1910 = 1, p1960 = 1).
  - check the motor circuit configuration (star-delta).
  - check the motor load.
  - check the power cable connections.
  - check the power cables for short-circuit or ground fault.
  - check the length of the power cables.
  - replace power unit.

---

**F30020 Power unit: Configuration not supported**

**Message value:** fault cause: %1, additional information: %2

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A configuration is requested that is not supported by the power unit.

Fault value (r0949, interpret hexadecimal):

yyyyxxxx hex: xxxx = fault cause, yyyy = additional information (siemensintern)

xxxx = 0: Autonomous operation is requested but is not supported.

xxxx = 1: The requested DRIVE-CLiQ timing is not permissible.

xxxx = 2: A PM260 has been detected with PS-ASIC version 2. This combination is not supported.

xxxx = 3: Initialization was not able to be successfully completed. It is possible that the Control Unit was withdrawn from the power module before or during power-up.

xxxx = 4: The combination of power unit and Control Unit or Control Unit Adapter is not supported.

xxxx = 5: The higher current controller dynamic performance is not supported.

**Remedy:**

- Re fault cause = 0:
- If required, deactivate an active internal voltage protection (p1231).
- Re fault cause = 1:
- Update the Control Unit firmware or change the DRIVE-CLiQ topology.
- Re fault cause = 2:
- Replace the power unit with a PM260 with PS-ASIC version 3 (or higher).
- Re fault cause = 3, 4:
- Insert a Control Unit or Control Unit Adapter (CUAxx) on an appropriate Power Module and perform a POWER ON for the Control Unit or the Control Units Adapter.
- Re fault cause = 5:
- use a booksize format power unit.
  - for a Double Motor Module operate the two drive controls with the same current controller sampling time (p0115[0]). Otherwise, the higher current controller dynamics can only be activated on the drive with the longer sampling time.
  - If required, de-select the higher current controller dynamic performance (p1810.11 = 0). After deselecting the computing dead time, recalculate the controller gains (p0340 = 4). If required, optimize the speed controller.
- See also: p0115, p1231, p1810

---

**F30021 Power unit: Ground fault**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Power unit has detected a ground fault.  
- ground fault in the power cables.  
- winding fault or ground fault at the motor.  
- CT defective.  
Additional cause for CU310/CUA31:  
- when the brake is applied, this causes the hardware DC current monitoring to respond.  
Additional cause for parallel switching devices (r0108.15 = 1):  
- the closed-loop circulating current control is either too slow or has been set too fast.  
Fault value (r0949, interpret decimal):  
Absolute value, total current amplitude [20479 = r0209 x 1.4142].  
Note:  
For power units, a ground fault is also emulated in r3113.5.  
**Remedy:**  
- check the power cable connections.  
- check the motor.  
- check the CT.  
The following applies additionally for CU310/CUA31:  
- check the cables and contacts of the brake connection (a wire is possibly broken).  
For parallel switching devices (r0108.15 = 1) the following additionally applies:  
- check the ground fault monitoring thresholds (p0287).  
- check the setting of the closed-loop circulating current control (p7036, p7037).  
See also: p0287 (Ground fault monitoring thresholds)

---

**F30022 Power unit: Monitoring U<sub>ce</sub>**

**Message value:** Fault cause: %1 bin  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** POWER ON  
**Cause:** In the power unit, the monitoring of the collector-emitter voltage (U<sub>ce</sub>) of the semiconductor has responded.  
Possible causes:  
- fiber-optic cable interrupted.  
- power supply of the IGBT gating module missing.  
- short-circuit at the power unit output.  
- defective semiconductor in the power unit.  
Fault value (r0949, interpret binary):  
Bit 0: Short-circuit in phase U  
Bit 1: Short circuit in phase V  
Bit 2: Short-circuit in phase W  
Bit 3: Light transmitter enable defective  
Bit 4: U<sub>ce</sub> group fault signal interrupted  
See also: r0949 (Fault value)  
**Remedy:**  
- check the fiber-optic cable and if required, replace.  
- check the power supply of the IGBT gating module (24 V).  
- check the power cable connections.  
- select the defective semiconductor and replace.

---

**F30024 Power unit: Overtemperature thermal model**

**Message value:** -  
**Drive object:** B\_INF  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The temperature difference between the heat sink and chip has exceeded the permissible limit value.  
- the permissible load duty cycle was not maintained.  
- insufficient cooling, fan failure.  
- overload.

- Remedy:**
- ambient temperature too high.
  - pulse frequency too high.
- See also: r0037
- adapt the load duty cycle.
  - check whether the fan is running.
  - check the fan elements.
  - check whether the ambient temperature is in the permissible range.
  - check the motor load.
  - reduce the pulse frequency if this is higher than the rated pulse frequency.

---

**F30024      Power unit: Overtemperature thermal model**

- Message value:** -
- Drive object:** VECTOR\_G
- Reaction:** OFF2
- Acknowledge:** IMMEDIATELY
- Cause:** The temperature difference between the heat sink and chip has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
  - insufficient cooling, fan failure.
  - overload.
  - ambient temperature too high.
  - pulse frequency too high.
- See also: r0037
- Remedy:**
- adapt the load duty cycle.
  - check whether the fan is running.
  - check the fan elements.
  - check whether the ambient temperature is in the permissible range.
  - check the motor load.
  - reduce the pulse frequency if this is higher than the rated pulse frequency.
  - if DC braking is active: reduce braking current (p1232).

---

**F30025      Power unit: Chip overtemperature**

- Message value:** %1
- Drive object:** B\_INF, VECTOR\_G
- Reaction:** OFF2
- Acknowledge:** IMMEDIATELY
- Cause:** The chip temperature of the semiconductor has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
  - insufficient cooling, fan failure.
  - overload.
  - ambient temperature too high.
  - pulse frequency too high.
- Fault value (r0949, interpret decimal):  
Temperature difference between the heat sink and chip [0.01 °C].
- Remedy:**
- adapt the load duty cycle.
  - check whether the fan is running.
  - check the fan elements.
  - check whether the ambient temperature is in the permissible range.
  - check the motor load.
  - reduce the pulse frequency if this is higher than the rated pulse frequency.
- Notice:**  
This fault can only be acknowledged after this alarm threshold for alarm A05001 has been undershot.

**F30045      Power unit: Supply undervoltage**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** Power supply fault in the power unit.  
- The voltage monitor signals an undervoltage fault on the module.  
The following applies for CU31x:  
- the voltage monitoring on the DAC board signals an undervoltage fault on the module.  
**Remedy:**  
- Check the power supply of the power unit.  
- carry out a POWER ON (power off/on) for the component.  
- replace the module if necessary.

<b>A30046 (F)</b>	<b>Power unit: Undervoltage, alarm</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	Before the last restart, a problem occurred at the power unit power supply. - the voltage monitor in the internal FPGA of the PSA signals an undervoltage fault on the module. Alarm value only for internal diagnostics
<b>Remedy:</b>	- check the 24 V DC voltage supply to power unit. - carry out a POWER ON (power off/on) for the component. - replace the module if necessary.
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
<b>A30046 (F)</b>	<b>Power unit: Undervoltage, alarm</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	Before the last restart, a problem occurred at the power unit power supply. - the voltage monitor in the internal FPGA of the PSA signals an undervoltage fault on the module. Fault value (r0949, interpret decimal): Register value of the voltage fault register.
<b>Remedy:</b>	- check the 24 V DC voltage supply to power unit. - carry out a POWER ON (power off/on) for the component. - replace the module if necessary.
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
<b>F30047</b>	<b>Cooling unit: Cooling medium flow rate too low</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The flowrate of the cooling unit has fallen below the fault threshold.
<b>Remedy:</b>	- Check the feedback signals and parameter assignment (p0260 ... p0267). - Check the coolant feed.
<b>A30048</b>	<b>Power unit: External fan faulty</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The feedback signal from the external fan indicates a fault. - fan faulty, blocked. - feedback signal inaccurate.
<b>Remedy:</b>	- check the external fan and replace if necessary. - if you are using an external fan with feedback, check its wiring (X12.2 or X13.2). Note: If you are using an external fan without feedback, check that the feedback terminal wiring on the power unit is connected to ground and make this connection if necessary (X12.1/2 or X13.1/2).

---

**A30049      Power unit: Internal fan faulty**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The internal fan has failed.  
**Remedy:** Check the internal fan and replace if necessary.

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** POWER ON  
**Cause:** The voltage monitor signals an overvoltage fault on the module.  
**Remedy:** - check the 24 V power supply.  
- replace the module if necessary.

---

**F30052      EEPROM data error**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** POWER ON  
**Cause:** EEPROM data error of the power unit module.  
Fault value (r0949, interpret decimal):  
0, 2, 3, 4:  
The EEPROM data read in from the power unit module are incorrect.  
1:  
EEPROM data is not compatible to the firmware of the power unit application.  
Additional values:  
Only for internal Siemens troubleshooting.  
**Remedy:** Re fault value = 0, 2, 3, 4:  
Replace the power unit module or update the EEPROM data.  
For fault value = 1:  
The following applies for CU31x and CUA31:  
Update the firmware \SIEMENS\SINAMICS\CODE\SAC\cu31xi.ufw (cua31.ufw)

---

**F30053      FPGA data faulty**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** POWER ON  
**Cause:** The FPGA data of the power unit are faulty.  
**Remedy:** Replace the power unit or update the FPGA data.

---

**A30054 (F)      Power unit: Undervoltage when opening the brake**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When the brake is being opened, it is detected that the power supply voltage is less than 24 V - 10% = 21.6V.  
Alarm value (r2124, interpret decimal):  
Supply voltage fault [0.1 V].  
Example:  
Alarm value = 195 --> voltage = 19.5 V  
**Remedy:** Check the 24 V voltage for stability and value.

Reaction upon F: NONE (OFF1, OFF2, OFF3)  
 Acknowl. upon F: IMMEDIATELY

---

**F30055 Power unit: Braking chopper overcurrent**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** An overcurrent condition has occurred in the braking chopper.  
**Remedy:** - check whether the braking resistor has a short circuit.  
 - for an external braking resistor, check whether the resistor may have been dimensioned too small.  
**Note:**  
 The braking chopper is only enabled again at pulse enable after the fault has been acknowledged.

---

**A30057 Power unit: Line asymmetry**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Frequencies have been detected on the DC link voltage that would suggest line asymmetry or failure of a line phase. It is also possible that a motor phase has failed. Fault F30011 is output if the alarm is present and at the latest after 5 minutes. The precise duration depends on the power unit type and the particular frequencies. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.  
**Remedy:** - check the line phase connection.  
 - check the motor feeder cable connections.  
 If there is no phase failure of the line or motor, then line asymmetry is involved.  
 - reduce the power in order to avoid fault F30011.

---

**F30059 Power unit: Internal fan faulty**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The internal power unit fan has failed and is possibly defective.  
**Remedy:** Check the internal fan and replace if necessary.

---

**F30060 (A) Pre-charge contactor state monitoring**

**Message value:** Fault cause: %1 bin  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2 (NONE, OFF1)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** A feedback signal for the pre-charging contactor (ALM, SLM, BLM diode) or the line contactor (BLM thyristor) inter-connected and the monitoring activated. After switching-in/switching-out the contactor, a correct feedback signal was not received within the monitoring time set in p0255[0]. Fault value (r0949, interpret binary):  
 Bit 0: The time set in p0255[0] was exceeded when switching-in/switching-out the contactor.  
 Bit 1: The pre-charging contactor was opened while pre-charging or in the infeed mode (BLM thyristor).  
 Bit 2: The pre-charging contactor was switched-in in the OFF state or during infeed operation.  
**Remedy:** - check the monitoring time setting (p0255[0]).  
 - check the contactor wiring and activation.  
 - replace the contactor.  
 Reaction upon A: NONE  
 Acknowl. upon A: NONE

---

<b>F30061 (A)</b>	<b>Bridging contactor monitoring</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2 (NONE, OFF1)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	A feedback signal for the bypass contactor is interconnected and the monitoring activated. After switching-in/switching-out the contactor, a correct feedback signal was not received within the monitoring time set in p0255[1]. Fault value (r0949, interpret binary): Bit 0: The time set in p0255[1] was exceeded when switching-in/switching-out the contactor. Bit 1: The bypass contactor was opened in operation. Bit 2: The bypass contactor was switched-in in the OFF state or during pre-charging.
<b>Remedy:</b>	- check the monitoring time setting (p0255[1]). - check the contactor wiring and activation. - replace the contactor.

<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>Communications between the Control Unit (CU) and Power Module (PM) via the interface no longer possible. The CU may have been withdrawn or is incorrectly inserted.</p> <p>Fault value (r0949, interpret hexadecimal):</p> <p>0 hex: The Control Unit was withdrawn from the Power Module during operation.</p> <p>1 hex: The Control Unit was withdrawn from the Power Module during operation, although the encoderless safe motion monitoring functions are enabled. This is not supported. After re-inserting the Control Unit in operation, communications to the Power Module no longer possible.</p> <p>20A hex: The Control Unit was inserted on a Power Module, which has another code number.</p> <p>20B hex: The Control Unit was inserted on a Power Module, which although it has the same code number, has a different serial number.</p> <p>601 hex: The Control Unit was inserted on a Power Module, whose power/performance class (chassis unit) is not supported.</p>
<b>Remedy:</b>	Reinsert the Control Unit (CU) or the Control Unit adapter (CUAxx) onto the original Power Module and continue operation. If required, carry out a POWER ON for the CU and/or the CUA.
<b>Reaction upon A:</b>	NONE
<b>Acknowl. upon A:</b>	NONE
<b>F30080</b>	<b>Power unit: Current increasing too quickly</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	All objects
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>The power unit has detected an excessive rate of rise in the overvoltage range.</p> <ul style="list-style-type: none"> <li>- closed-loop control is incorrectly parameterized.</li> <li>- motor has a short-circuit or fault to ground (frame).</li> <li>- U/f operation: Up ramp set too low.</li> <li>- U/f operation: rated current of motor much greater than that of power unit.</li> <li>- infeed: High discharge and post-charging currents for voltage dip.</li> <li>- infeed: High post-charging currents for overload when motoring and DC link voltage dip.</li> <li>- infeed: Short-circuit currents at power-up due to the missing line reactor.</li> <li>- power cables are not correctly connected.</li> <li>- power cables exceed the maximum permissible length.</li> <li>- power unit defective.</li> </ul> <p>Additional causes for a parallel switching device (r0108.15 = 1):</p> <ul style="list-style-type: none"> <li>- a power unit has tripped (powered down) due to a ground fault.</li> <li>- the closed-loop circulating current control is either too slow or has been set too fast.</li> </ul>

Fault value (r0949, interpret bitwise binary):

Bit 0: Phase U.

Bit 1: Phase V.

Bit 2: Phase W.

**Remedy:**

- check the motor data - if required, carry out commissioning.
  - check the motor circuit configuration (star-delta)
  - U/f operation: Increase up ramp.
  - U/f operation: Check assignment of rated currents of motor and power unit.
  - infeed: Check the line supply quality.
  - infeed: Reduce the motor load.
  - infeed: Correct connection of the line reactor.
  - check the power cable connections.
  - check the power cables for short-circuit or ground fault.
  - check the length of the power cables.
  - replace power unit.
- For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
  - check the setting of the closed-loop circulating current control (p7036, p7037).

**F30081**

**Power unit: Switching operations too frequent**

**Message value:**

Fault cause: %1 bin

**Drive object:**

All objects

**Reaction:**

OFF2

**Acknowledge:**

IMMEDIATELY

**Cause:**

- The power unit has executed too many switching operations for current limitation.
- closed-loop control is incorrectly parameterized.
  - motor has a short-circuit or fault to ground (frame).
  - U/f operation: Up ramp set too low.
  - U/f operation: rated current of motor much greater than that of power unit.
  - infeed: High discharge and post-charging currents for voltage dip.
  - infeed: High post-charging currents for overload when motoring and DC link voltage dip.
  - infeed: Short-circuit currents at power-up due to the missing line reactor.
  - power cables are not correctly connected.
  - power cables exceed the maximum permissible length.
  - power unit defective.
- Additional causes for a parallel switching device (r0108.15 = 1):
- a power unit has tripped (powered down) due to a ground fault.
  - the closed-loop circulating current control is either too slow or has been set too fast.
- Fault value (r0949, interpret bitwise binary):
- Bit 0: Phase U.
- Bit 1: Phase V.
- Bit 2: Phase W.

**Remedy:**

- check the motor data - if required, carry out commissioning.
  - check the motor circuit configuration (star-delta)
  - U/f operation: Increase up ramp.
  - U/f operation: Check assignment of rated currents of motor and power unit.
  - infeed: Check the line supply quality.
  - infeed: Reduce the motor load.
  - infeed: Correct connection of the line reactor.
  - check the power cable connections.
  - check the power cables for short-circuit or ground fault.
  - check the length of the power cables.
  - replace power unit.
- For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
  - check the setting of the closed-loop circulating current control (p7036, p7037).

<b>F30105</b>	<b>PU: Actual value sensing fault</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	At least one incorrect actual value channel was detected on the Power Stack Adapter (PSA). The incorrect actual value channels are displayed in the following diagnostic parameters.
<b>Remedy:</b>	Evaluate the diagnostic parameters. If the actual value channel is incorrect, check the components and if required, replace.
<b>F30314</b>	<b>Power unit: 24 V power supply overloaded by PM</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The 24 V power supply through the Power Module (PM) is overloaded. An external 24 V power supply via X124 on the Control Unit is not connected.
<b>Remedy:</b>	Connect an external 24 V power supply via X124 at the Control Unit.
<b>A30315 (F)</b>	<b>Power unit: 24 V power supply overloaded by PM</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE

<b>Cause:</b>	The 24 V power supply through the Power Module (PM) is overloaded. An external 24 V power supply via X124 on the Control Unit is not connected.
<b>Remedy:</b>	Connect an external 24 V power supply via X124 at the Control Unit.
	Reaction upon F: NONE (OFF1, OFF2, OFF3)
	Acknowled. upon F: IMMEDIATELY (POWER ON)
<b>A30502</b>	<b>Power unit: DC link overvoltage</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The power unit has detected overvoltage in the DC link on a pulse inhibit. - device connection voltage too high. - line reactor incorrectly dimensioned. Alarm value (r0949, interpret decimal): DC link voltage [1 bit = 100 mV]. See also: r0070 (Actual DC link voltage)
<b>Remedy:</b>	- check the device supply voltage (p0210). - check the dimensioning of the line reactor. See also: p0210 (Drive unit line supply voltage)
<b>F30600</b>	<b>SI MM: STOP A initiated</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The "Safety Integrated" function integrated in the drive in the Motor Module (MM) has detected a fault and initiated STOP A (pulse suppression via the safety shutdown path of the Motor Module). - forced checking procedure of the safety shutdown path of the Motor Module unsuccessful. - subsequent response to fault F30611 (defect in a monitoring channel).

Fault value (r0949, interpret decimal):

0: Stop request from the Control Unit.

1005: Pulses suppressed although STO not selected and there is no internal STOP A present.

1010: Pulses enabled although STO is selected or an internal STOP A is present.

1020: Internal software error in the "Internal voltage protection" function. The "internal voltage protection" function is withdrawn. A STOP A that cannot be acknowledged is initiated.

9999: Subsequent response to fault F30611.

**Remedy:**

- select Safe Torque Off and de-select again.

- replace the Motor Module involved.

For fault value = 1020:

- carry out a POWER ON (power off/on) for all components.

- upgrade the Motor Module software.

- replace the Motor Module.

For fault value = 9999:

- carry out diagnostics for fault F30611.

Note:

CU: Control Unit

MM: Motor Module

SI: Safety Integrated

STO: Safe Torque Off / SH: Safe standstill

**F30611**

**SI MM: Defect in a monitoring channel**

**Message value:** %1

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The "Safety Integrated" function integrated in the drive in the Motor Module (MM) has detected a fault in the cross-wise data comparison between the Control Unit (CU) and MM and initiated a STOP F.  
As a result of this fault, after the parameterized transition has expired (p9858), fault F30600 is output (SI MM: STOP A initiated).

Fault value (r0949, interpret decimal):

0: Stop request from the Control Unit.

1 ... 999:

Number of the cross-compared data that resulted in this fault. This number is also displayed in r9895.

1: SI monitoring clock cycle (r9780, r9880).

2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.

3: SI SGE changeover tolerance time (p9650, p9850).

4: SI transition period STOP F to STOP A (p9658, p9858).

5: SI enable Safe Brake Control (p9602, p9802).

6: SI Motion enable, safety-relevant functions (p9501, internal value).

7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).

8: SI PROFIsafe address (p9610, p9810).

9: SI debounce time for STO/SBC/SS1 (MM) (p9651, p9851).

10: SI delay time for pulse suppression for ESR (p9697, p9897).

11: SI Safe Brake Adapter mode, BICO interconnection (p9621, p9821).

12: SI Safe Brake Adapter relay ON time (p9622[0], p9822[0]).

13: SI Safe Brake Adapter relay OFF time (p9622[1], p9822[1]).

14: SI PROFIsafe telegram selection (p9611, p9811).

1000: Watchdog timer has expired.

Within the time of approx. 5 x p9650, alternatively, the following was defined:

- Too many switching operations have occurred at the EP terminal of the Motor Module.

- Via PROFIsafe/TM54F, STO was too frequently initiated (also as subsequent response).

- Safe pulse cancellation (r9723.9) was too frequently initiated (also as subsequent response).

1001, 1002: Initialization error, change timer / check timer.

1950: Module temperature outside the permissible temperature range.

1951: Module temperature not plausible.

2000: Status of the STO selection on the Control Unit and Motor Module are different.

2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.

2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different (status of the timer in p9650/p9850).

6000 ... 6999:

Error in the PROFIsafe control.

For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions. The significance of the individual message values is described in safety message C01711.

**Remedy:**

Re fault value = 1 ... 5 and 7 ... 999:

- check the cross data comparison that resulted in a STOP F.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 6:

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 1000:

- check the wiring of the safety-relevant inputs (SGE) on the Control Unit (contact problems).
- PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller.
- check the wiring of the failsafe inputs at the TM54F (contact problems).

Re fault value = 1001, 1002:

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 2000, 2001, 2002:

- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the cause of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace the Motor Module involved.

Re fault value = 6000 ... 6999:

Refer to the description of the message values in safety message C01711.

Note:

CU: Control Unit

EP: Enable Pulses (pulse enable)

ESR: Extended Stop and Retract

MM: Motor Module

SGE: Safety-relevant input

**F30625              SI MM: Sign-of-life error in safety data**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The "Safety Integrated" function integrated in the drive on the Motor Module (MM) has detected an error in the sign-of-life of the safety data between the Control Unit (CU) and MM and initiated a STOP A.  
- there is either a DRIVE-CLiQ communication error or communication has failed.  
- a time slice overflow of the safety software has occurred.  
- The enable of the safety functions in both monitoring channels is inconsistent (p9601 = 0, p9801 <> 0).  
Fault value (r0949, interpret decimal):  
Only for internal Siemens troubleshooting.  
**Remedy:**  
- select Safe Torque Off and de-select again.  
- carry out a POWER ON (power off/on) for all components.  
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.  
- de-select all drive functions that are not absolutely necessary.  
- reduce the number of drives.  
- check the electrical cabinet design and cable routing for EMC compliance  
- Check the enable of the safety functions for both of the monitoring channels and if required, correct (p9601, p9801).  
Note:  
CU: Control Unit  
MM: Motor Module  
SI: Safety Integrated

**F30630              SI MM: Brake control error**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The "Safety Integrated" function integrated in the drive on the Motor Module (MM) has detected a brake control error and initiated a STOP A.  
Fault value (r0949, interpret decimal):  
10:  
Fault in "open holding brake" operation.  
- Parameter p1278 incorrectly set.  
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).  
- Ground fault in brake cable.

30:

Fault in "close holding brake" operation.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC de-activated)).

- Short-circuit in brake winding.

40:

Fault in "brake closed" state.

60, 70:

Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).

81: Safe Brake Adapter: Fault in "brake closed" state.

82: Safe Brake Adapter: Fault in "open brake" state.

83: Safe Brake Adapter: Fault in "close brake" state.

84,85:

Safe Brake Adapter: Fault in the brake control circuit of the Control Unit or communication fault between Control Unit and Motor Module (brake control).

Note:

The following causes may apply to fault values:

- motor cable is not shielded correctly.

- defect in control circuit of the Motor Module.

**Remedy:**

- check parameter p1278 (for SBC, only p1278 = 0 is permissible).

- select Safe Torque Off and de-select again.

- check the motor holding brake connection.

- check the function of the motor holding brake.

- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).

- replace the Motor Module involved.

Operation with Safe Brake Module or Safe Brake Adapter:

- check the Safe Brake Module or Safe Brake Adapter connection.

- Replace the Safe Brake Module or Safe Brake Adapter.

Note:

MM: Motor Module

SBC: Safe Brake Control

SI: Safety Integrated

### F30631

### Brake control: external release active

**Message value:**

-

**Drive object:**

B\_INF, VECTOR\_G

**Reaction:**

OFF2

**Acknowledge:**

IMMEDIATELY (POWER ON)

**Cause:**

For service purposes, the brake is supplied with voltage at terminal X4.1.

**Remedy:**

Remove the power supply at terminal X4.1.

### A30640 (F)

### SI MM: Fault in the shutdown path of the second channel

**Message value:**

%1

**Drive object:**

B\_INF, VECTOR\_G

**Reaction:**

NONE

**Acknowledge:**

NONE

**Cause:**

The Motor Module has detected a communication error with the higher-level control or the TM54F to transfer the safety-relevant information or there is a communication error between Motor Modules connected in parallel.

Note:

This fault results in a STOP A that can be acknowledged.

Fault value (r0949, interpret decimal):

Only for internal Siemens troubleshooting.

**Remedy:**

For the higher-level control, the following applies:

- check the PROFIsafe address in the higher-level control and Motor Modules and if required, align.

- save all parameters (p0977 = 1).

- carry out a POWER ON (power off/on) for all components.

For TM54F, carry out the following steps:

- start the copy function for the node identifier (p9700 = 1D hex).
- acknowledge hardware CRC (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

For a parallel connection, the following applies:

- check the PROFIsafe address in the Control Unit and Motor Module and if required, align.
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

The following generally applies:

- upgrade the Motor Module software.

Note:

MM: Motor Module

SI: Safety Integrated

See also: p9810 (SI PROFIsafe address (Motor Module))

Reaction upon F: NONE (OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

### **F30649 SI MM: Internal software error**

**Message value:** %1

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** An internal error in the Safety Integrated software on the Motor Module has occurred.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret hexadecimal):

Only for internal Siemens troubleshooting.

**Remedy:**

- carry out a POWER ON (power off/on) for all components.
- re-commission the Safety Integrated function and carry out a POWER ON.
- upgrade the Motor Module software.
- contact the Hotline.
- replace the Motor Module.

Note:

MM: Motor Module

SI: Safety Integrated

---

### **F30650 SI MM: Acceptance test required**

**Message value:** %1

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The "Safety Integrated" function on the Motor Module requires an acceptance test.

Note:

This fault results in a STOP A that can be acknowledged.

Fault value (r0949, interpret decimal):

130: Safety parameters for the Motor Module not available.

Note:

This fault value is always output when Safety Integrated is commissioned for the first time.

1000: Reference and actual checksum in the Motor Module are not identical (booting).

- as a result of the changed current controller sampling time (p0115[0]), the clock cycle time for the Safety Integrated Basic Functions (r9880) was adapted.

- at least one checksum-checked piece of data is defective.

- Safety parameters set offline and loaded into the Control Unit.

2000: Reference and actual checksum on the Motor Module are not identical (commissioning mode).

- reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898).

2003: Acceptance test is required as a safety parameter has been changed.

2005: The safety logbook has identified that the safety checksums have changed. An acceptance test is required.

3003: Acceptance test is required as a hardware-related safety parameter has been changed.

9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.

**Remedy:**

- For fault value = 130:
  - carry out safety commissioning routine.
- For fault value = 1000:
  - check the Safety Integrated Basic Functions (r9880) and adapt the reference checksum (p9899).
  - again carry out safety commissioning routine.
  - replace the memory card or Control Unit.
  - Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate settings).
- For fault value = 2000:
  - check the safety parameters in the Motor Module and adapt the reference checksum (p9899).
- Re fault value = 2003, 2005:
  - Carry out an acceptance test and generate an acceptance report.

The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:  
 SINAMICS S120 Function Manual Safety Integrated

For fault value = 3003:
 

- carry out the function checks for the modified hardware and generate an acceptance report.

 The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:  
 SINAMICS S120 Function Manual Safety Integrated

For fault value = 9999:
 

- carry out diagnostics for the other safety-related fault that is present.

 Note:  
 MM: Motor Module  
 SI: Safety Integrated  
 See also: p9799 (SI reference checksum SI parameters (Control Unit)), p9899 (SI reference checksum SI parameters (Motor Module))

**F30651 SI MM: Synchronization with Control Unit unsuccessful**

**Message value:** %1

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The "Safety Integrated" function integrated in the drive is requesting synchronization of the safety time slices on the Control Unit and Motor Module. This synchronization routine was unsuccessful.

**Note:**  
 This fault results in a STOP A that cannot be acknowledged.  
 Fault value (r0949, interpret decimal):  
 Only for internal Siemens troubleshooting.

**Remedy:**

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

**Note:**  
 MM: Motor Module  
 SI: Safety Integrated

---

**F30652 SI MM: Illegal monitoring clock cycle**

**Message value:** %1

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The Safety Integrated monitoring clock cycle cannot be maintained due to the communication conditions requested in the system.

**Note:**  
 This fault results in a STOP A that cannot be acknowledged.  
 Fault value (r0949, interpret decimal):  
 Only for internal Siemens troubleshooting.

**Remedy:**

- if fault F01652 simultaneously occurs, apply the remedy/countermeasure described there.
- Upgrade the firmware of the Motor Module to a later version.

Note:  
MM: Motor Module  
SI: Safety Integrated

<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	A module-internal communication error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline.
<b>F30664</b>	<b>Error while booting</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	An error has occurred during booting. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	- carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline.
<b>F30665</b>	<b>SI MM: System is defective</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A system defect was detected before the last boot or in the actual one. The system might have been rebooted (reset). Fault value (r0949, interpret hexadecimal): 200000 hex, 400000 hex: - Fault in the actual booting/operation. 2 hex: - parameters p9500 and p9300 are not the same (if Safety message C30711 is displayed at the same time). Additional values: - defect before the last time that the system booted.
<b>Remedy:</b>	- carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline. For fault value = 2: - check parameters p9500 and p9300 to see if they are the same (if Safety message C30711 is displayed at the same time). Re fault value = 400000 hex: - ensure that the Control Unit is connected to the Power Module.
<b>A30666 (F)</b>	<b>SI Motion MM: Steady-state (static) 1 signal at the F-DI for safety-relevant acknowledgement</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	A logical 1 signal is present at the F-DI configured in p10106 for more than 10 seconds. If, at the F-DI no acknowledgment was performed for safe acknowledgment, then a steady-state logical and 0 signal must be present. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.

**Remedy:** Set the fail-safe digital input (F-DI) to a logical 0 signal (p10106).

Note:

F-DI: Failsafe Digital Input

Reaction upon F: NONE

Acknowled. upon F: IMMEDIATELY

---

**F30672 SI CU: Control Unit software incompatible**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The existing Control Unit software does not support the safe drive-based motion monitoring function.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):

Only for internal Siemens troubleshooting.

**Remedy:** - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module (F01655, F30655) and if required, carry out diagnostics for the faults involved.

- use a Control Unit that supports the safe motion monitoring function.

- upgrade the Control Unit software.

Note:

SI: Safety Integrated

---

**F30674 SI Motion MM: Safety function not supported by PROFIsafe telegram**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** POWER ON

**Cause:** The monitoring function enabled in p9301 and p9801 is not supported by the currently set PROFIsafe telegram (p9811).

Note:

This fault does not result in a safety stop response.

Fault value (r0949, interpret bitwise binary):

Bit 24 = 1:

Transfer SLS (SG) limit value via PROFIsafe not supported (p9301.24).

Bit 25 = 1:

Transfer safe position via PROFIsafe is not supported (p9301.25).

**Remedy:** - deselect the monitoring function involved (p9301, p9801).

- set the matching PROFIsafe telegram (p9811).

Note:

SI: Safety Integrated

SLS: Safely-Limited Speed

SP: Safe Position

---

**F30680 SI Motion MM: Checksum error safety monitoring functions**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The actual checksum calculated by the Motor Module and entered in r9398 over the safety-relevant parameters does not match the reference checksum saved in p9399 at the last machine acceptance.

Safety-relevant parameters have been changed or a fault is present.

Note:

This fault results in a STOP A that can be acknowledged.

Fault value (r0949, interpret decimal):

0: Checksum error for SI parameters for motion monitoring.

1: Checksum error for SI parameters for component assignment.

- Remedy:**
- check the safety-relevant parameters and if required, correct.
  - set the reference checksum to the actual checksum.
  - execute the function "Copy RAM to ROM".
  - perform a POWER ON if safety parameters requiring a POWER ON have been modified.
  - carry out an acceptance test.

---

**F30681 SI Motion MM: Incorrect parameter value**

**Message value:** Parameter: %1, supplementary information: %2

**Drive object:** VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The parameter cannot be parameterized with this value.  
Note:

This message does not result in a safety stop response.

Fault value (r0949, interpret decimal): yyyyxxxx dec:

yyyy = supplementary information,

xxxx = parameter

yyyy = 0: no additional information available.

xxxx = 9301:

It is not permissible to enable the function "n<nx hysteresis and filtering" (p9301.16) in conjunction with the function "extended functions without selection" (p9801.5).

xxxx = 9385:

For Safety encoderless and synchronous motor, p9385 must be set to 4.

xxxx = 9801:

yyyy = 1:

If motion monitoring functions integrated in the drive (p9801.2 = 1) and extended functions without selection (p9801.5 = 1) are activated, then PROFIsafe (p9801.3 = 1) is not possible.

yyyy = 2:

Extended functions without selection (p9801.5 = 1) are enabled, without enabling motion monitoring functions integrated in the drive (p9801.2).

yyyy = 3:

Onboard F-DI are enabled, without enabling motion monitoring functions integrated in the drive (p9801.2).

yyyy = 5:

Transfer of the SLS limit value via PROFIsafe (p9301.24) has been enabled, without enabling PROFIsafe.

yyyy = 6:

Transfer of the safe position via PROFIsafe (p9301.25) has been enabled, without enabling PROFIsafe.

**Remedy:** - correct the parameter (if required, also on the CU side, p9601).

xxxx: parameter, yyyy: additional information.

If the encoder parameters (p9526/p9326) have different values, start the copy function for SI parameters on the drive (p9700 = 57 hex).

xxxx = 9301:

- Correct parameters p9501.16 and p9301.16, or deselect the extended functions without selection (p9801.5).

xxxx = 9317:

Further, p9316.0 should be checked.

xxxx = 9801:

yyyy = 1:

Only enable motion monitoring functions integrated in the drive (p9801.2 = 1) and extended functions without selection (p9801.5 = 1) – or only PROFIsafe (p9801.3 = 1).

yyyy = 2, 3:

Enable motion monitoring functions integrated in the drive (p9801.2 = 1).

yyyy = 5:

To transfer the SLS limit values via PROFIsafe (p9301.24 = 1), also enable PROFIsafe (p9801.3 = 1) and motion monitoring functions integrated in the drive (p9801.2 = 1).

yyyy = 6:

For the safe position via PROFIsafe (p9301.25 = 1), also enable PROFIsafe (p9801.3 = 1) and motion monitoring functions integrated in the drive (p9801.2 = 1).

- subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded".

- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
  - subsequent response to the message C30716 "SI Motion MM: tolerance for safe motion direction exceeded".
- See also: p9354 (SI Motion transition time STOP E to SOS (Motor Module)), p9554 (SI Motion transition time STOP E to SOS (SBH) (Control Unit))

**Remedy:**

- remove the cause of the fault at the control.
  - carry out a diagnostics routine for messages C30714, C30715, C30716.
- This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
- Note:
- SI: Safety Integrated
- SOS: Safe Operating Stop / SBH: Safe operating stop

---

**C30711 SI Motion MM: Defect in a monitoring channel**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** When cross-comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.

If at least one monitoring function is active, then after the parameterized timer has expired, the message C30701 "SI Motion: STOP B initiated" is output. The message is output with message value 1031 when the Sensor Module hardware is replaced.

The following message values may also occur in the following cases if the cause that is explicitly mentioned does not apply:

- differently parameterized cycle times (p9500/p9300, p9511/p9311).
- differently parameterized axis types (p9502/p9302).
- excessively fast cycle times (p9500/p9300, p9511/p9311).
- incorrect synchronization.

Message value (r9749, interpret decimal):

Note:

The significance of the individual message values is described in safety message C01711 of the Control Unit.

0 ... 999:

Number of the cross-compared data that resulted in this message.

1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.

1001: Initialization error of watchdog timer.

1003:

Reference tolerance exceeded.

When the user agreement is set, the difference between the new reference point that has been determined after power up (absolute encoder) or reference point approach (distance-coded or incremental measuring system) and the safe actual position (saved value + traversing distance) is greater than the reference tolerance (p9344). In this case, the user agreement is withdrawn.

1011: Acceptance test status between the monitoring channels differ.

1012: Plausibility violation of the actual value from the encoder.

1020: Cyc. communication failure between the monit. cycles.

1021: Cyc. communication failure between the monit. channel and Sensor Module.

1023: Error in the effectiveness test in the DRIVE-CLiQ encoder

1030: Encoder fault detected from another monitoring channel.

1031: Data transfer error between the monitoring channel and the Sensor Module (p9526/p9326).

1040: Pulses suppressed with active encoderless monitoring functions.

1041: Current absolute value too low (encoderless)

1042: Current/voltage plausibility error

1043: Too many acceleration phases

1044: Actual current values plausibility error.

1045: CRC of the standstill position incorrect.

5000 ... 5140:

PROFIsafe message values.

For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.

6000 ... 6166:

PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).

For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.

<b>Remedy:</b>	<p>7000 ... 7002:          Message values of the "Safe position via PROFIsafe" function.          See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)</p> <p>Re message value = 1002:          - Perform safe acknowledgment, set the user agreement in both monitoring channels simultaneously (within 2 s).</p> <p>Re message value = 1003:          - check the mechanical system of the axis. It is possible that the axis was shifted when switched-off, and the last saved actual position no longer corresponds with the new actual position after the system has been powered up again.          - Increase the tolerance for the actual value comparison when referencing (p9344).          Then check the actual values, perform a POWER ON and set the user agreement again.</p> <p>Re message value = 1004:          For 1., the following applies: Perform safe acknowledgment. Set the user agreement again.          For 2., the following applies: Perform safe acknowledgment. Only set the user agreement again if the axis has been referenced.</p> <p>Re message value = 1030:          - check the encoder connection.          - if required, replace the encoder.</p> <p>Re message value = 1031:          When replacing a Sensor Module, carry out the following steps:          - start the copy function for the node identifier on the drive (p9700 = 1D hex).          - acknowledge the hardware CRC on the drive (p9701 = EC hex).          - save all parameters (p0977 = 1).          - carry out a POWER ON (power off/on) for all components.</p> <p>The following always applies:          - check the encoder connection.          - if required, replace the encoder.</p> <p>Re message value = 1040:          - de-select encoderless monitoring functions, select and de-select STO.          - if monitoring function is active, issue "SLS" pulse enable within 5 s of de-selecting STO.</p> <p>Re other message values:          - the significance of the individual message values is described in safety message C01711.</p> <p>Note:          This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.          See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))</p>
----------------	---

<b>C30712</b>	<b>SI Motion MM: Defect in F-IO processing</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>When cross checking and comparing the two monitoring channels, the drive detected a difference between parameters or results of the F-IO processing and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.          The safety message C30711 with message value 0 is also displayed due to initiation of STOP F.          If at least one monitoring function is active, the safety message C30701 "SI Motion: STOP B initiated" is output after the parameterized timer has expired.          Message value (r9749, interpret decimal):          Number of the cross-compared data that resulted in this message.          Refer to the description of the message values in safety message C01712.</p>
<b>Remedy:</b>	<p>- check parameterization in the parameters involved and correct if required.          - ensure equality by copying the SI data to the second channel and then carry out an acceptance test.          - check monitoring clock cycle for equality (p9500, p9300).</p> <p>Note:          This message can be acknowledged via F-DI or PROFIsafe.          See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))</p>

---

<b>C30714</b>	<b>SI Motion MM: Safely-Limited Speed exceeded</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The drive had moved faster than that specified by the velocity limit value (p9331). The drive is stopped as a result of the configured stop response (p9363). Message value (r9749, interpret decimal): 100: SLS1 exceeded. 200: SLS2 exceeded. 300: SLS3 exceeded. 400: SLS4 exceeded. 1000: Encoder limit frequency exceeded.
<b>Remedy:</b>	- check the traversing/motion program in the control. - check the limits for "SLS" function and if required, adapt (p9331). Note: This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe. SI: Safety Integrated SLS: Safely-Limited Speed / SG: Safely reduced speed See also: p9331 (SI Motion SLS limit values (Motor Module)), p9363 (SI Motion SLS stop response (Motor Module))

---

<b>C30715</b>	<b>SI Motion MM: Safely-limited position exceeded</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The axis has moved past a parameterized position that is monitored by the "SLP" function. Message value (r9749, interpret decimal): 10: SLP1 violated. 20: SLP2 violated.
<b>Remedy:</b>	- check the traversing/motion program in the control. - check the limits for "SLP" function and if required, adapt (p9534, p9535). This message can be acknowledged as follows: - motion monitoring functions with SINUMERIK: Via the machine control panel Note: SI: Safety Integrated SLP: Safely-Limited Position / SE: Safe software limit switches See also: p9334 (SI Motion SLP upper limit values (Motor Module)), p9335 (SI Motion SLP lower limit values (Motor Module))

---

<b>C30716</b>	<b>SI Motion MM: Tolerance for safe motion direction exceeded</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The tolerance for the "safe motion direction" function was exceeded. The drive is stopped as a result of the configured stop response (p9366). Message value (r9749, interpret decimal): 0: Tolerance for the "safe motion direction positive" function exceeded. 1: Tolerance for the "safe motion direction negative" function exceeded.
<b>Remedy:</b>	- check the traversing/motion program in the control. - check the tolerance for "SDI" function and if required, adapt (p9364). This message can be acknowledged as follows: - Deselect the "SDI" function and select again. - Perform a safe acknowledgment via F-DI or PROFIsafe.

---

Note:

SDI: Safe Direction (safe motion direction)

SI: Safety Integrated

See also: p9364 (SI Motion SDI tolerance (Motor Module)), p9365 (SI Motion SDI delay time (Motor Module)), p9366 (SI Motion SDI stop response (Motor Module))

<b>C30730</b>	<b>SI Motion MM: Reference block for dynamic safely limited speed invalid</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>The reference block transferred via PROFIsafe is negative.</p> <p>A reference block is used to generate a referred velocity limit value based on the reference quantity "Velocity limit value SLS1" (p9331[0]).</p> <p>The drive is stopped as a result of the configured stop response (p9363[0]).</p> <p>Message value (r9749, interpret decimal):</p> <p>requested, invalid reference block.</p>
<b>Remedy:</b>	<p>In the PROFIsafe telegram, input data S_SLS_LIMIT_IST must be corrected.</p> <p>This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.</p> <p>Note:</p> <p>SI: Safety Integrated</p> <p>SLS: Safely-Limited Speed</p>
<b>C30770</b>	<b>SI Motion MM: Discrepancy error affecting the fail-safe inputs/outputs</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	<p>The fail-safe digital inputs/digital outputs (F-DI/F-DO) show a different state longer than that parameterized in p10002 / p10102.</p> <p>Fault value (r0949, interpret hexadecimal):</p> <p>yyyyxxxx hex</p> <p>xxxx: Discrepancy error for fail-safe digital inputs (F-DI).</p> <p>Bit 0: Discrepancy error for F-DI 0</p> <p>Bit 1: Discrepancy error for F-DI 1</p> <p>...</p> <p>yyyy: Discrepancy error for fail-safe digital outputs (F-DO).</p> <p>Bit 0: Discrepancy error for F-DO 0</p> <p>...</p> <p>Note:</p> <p>If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.</p>
<b>Remedy:</b>	<p>- check the wiring of the F-DI (contact problems).</p> <p>Note:</p> <p>This message can be acknowledged via F-DI or PROFIsafe.</p> <p>Discrepancy errors of an F-DI can only be completely acknowledged if safe acknowledgement was carried out once the cause of the error was resolved (p10006 or acknowledgment via PROFIsafe). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state internally.</p> <p>For cyclic switching operations at the F-DI, it may be necessary to adapt the discrepancy time to the switching frequency.</p> <p>If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.</p> <p><math>p10002 &lt; (tp / 2) - td</math> (discrepancy time must be less than half the period minus the actual discrepancy time)</p> <p><math>p10002 \geq p9500</math> (discrepancy time must be no less than P9500)</p> <p><math>p10002 &gt; td</math> (discrepancy time must be greater than the switch discrepancy time which may actually apply)</p> <p>td = possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p9500).</p> <p>tp = period for a switching operation in ms.</p> <p>When debounce p10017 is active, the discrepancy time is directly specified by the debounce time.</p>

If the period of a cyclic switching pulse has the order of magnitude of twice the debounce time, then the following formulas should be checked.

$p10002 < p10017 + 1 \text{ ms} - td$

$p10002 > td$

$p10002 \geq p9500$

Example:

For a 12 ms SI sampling cycle and a switching frequency of 110 ms ( $p10017 = 0$ ), the maximum discrepancy time which can be set is as follows:

$p10002 \leq (110/2 \text{ ms}) - 12 \text{ ms} = 43 \text{ ms}$

Rounded-off,  $p10002 \leq 36 \text{ ms}$  is obtained (since the discrepancy time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if the result is not an exact multiple of an SI sampling cycle).

Note:

F-DI: Failsafe Digital Input

F-DO: Failsafe Digital Output

<b>A30772</b>	<b>SI Motion MM: Test stop failsafe inputs/outputs active</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The test stop for the fail-safe digital inputs (F-DI) and/or fail-safe digital outputs (F-DO) is presently being performed. Note: F-DI: Failsafe Digital Input F-DO: Failsafe Digital Output
<b>Remedy:</b>	The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.
<b>F30773</b>	<b>SI Motion MM: Test stop fault Motor Module</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	A fault has occurred on the MM side during the test stop for the fail-safe outputs. Fault value (r0949, interpret hexadecimal): RRRVWXYZ hex: R: Reserved. V: Actual state of the DO channel concerned (see X) on the CU (corresponds to the states read back from the hardware, bit 0 = DO 0, bit 1 = DO 1, etc.). W: Required state of the DO channel concerned (see X, bit 0 = DO 0, bit 1 = DO 1, etc.). X: DO channels involved, which indicate an error (bit 0 = DO 0, bit 1 = DO 1, etc.). Y: Reason for the test stop fault. Z: State of the test stop in which the fault has occurred. Y: Reason for the test stop fault Y = 1: MM side in incorrect test stop state (internal fault). Y = 2: Expected states of the DOs were not fulfilled (CU305: readback via DI 22 / CU240 readback DI 2). Y = 3: Incorrect timer state on CU side (internal fault) Y = 4: Expected states of the diag DOs were not fulfilled (CU305: internal readback on MM channel). Y = 5: Expected states of the second diag DOs were not fulfilled (CU305: internal readback on CU channel). X and V indicate the DI or Diag-DO state dependent upon the reason for the fault (2, 4 or 5). In the event of multiple test stop faults, the first one that occurred is shown. Z: Test stop state and associated test actions Z = 0 ... 3: Synchronization phase of test stop between CU and Motor Module no switching operations Z = 4: DO + OFF and DO - OFF Z = 5: Check to see if states are as expected Z = 6: DO + ON and DO - ON Z = 7: Check to see if states are as expected Z = 8: DO + OFF and DO - ON Z = 9: Check to see if states are as expected Z = 10: DO + ON and DO - OFF Z = 11: Check to see if states are as expected

Z = 12: DO + OFF and DO - OFF

Z = 13: Check to see if states are as expected

Z = 14: End of test stop

Diag expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5: 0/-/-/1

7: 0/-/-/0

9: 0/-/-/0

11: 1/-/-/1

13: 0/-/-/1

Second diag expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5: -/-/-/1

7: -/-/-/0

9: -/-/-/1

11: -/-/-/0

13: -/-/-/1

DI expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5: -/1/1/-

7: -/0/0/-

9: -/0/1/-

11: -/0/1/-

13: -/1/1/-

Example:

Fault F01773 (CU) is signaled with fault value = 0001\_0127 and fault F30773 (MM) is signaled with fault value 0000\_0127.

This means that in state 7 (Z = 7) the state of the external readback signal was not set correctly (Y = 2) after DO-0 (X = 1) was switched to ON/ON.

Fault value 0001\_0127 indicates that 0 was expected (W = 0) and 1 (V = 1) was read back from the hardware.

Fault value 0000\_0127 on the MM indicates that the states were as expected.

In the case of fault F30773, W and V are always identical; a value of 0 always means that 0 was expected at the readback input but was not present on the other channel (CU).

**Remedy:**

Check the wiring of the F-DOs and restart the test stop.

Note:

The fault is withdrawn if the test stop is successfully completed.

In the event of multiple test stop faults, the first one that occurred is shown.

Once the test stop has been restarted the next queued test stop fault will be signaled (if there is one).

---

**C30797 SI Motion MM: Axis not safely referenced**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The standstill position saved before powering down does not match the actual position determined at power-up.  
Message value (r9749, interpret decimal):

1: Axis not referenced.

2: User agreement missing.

**Remedy:**

If safe automatic referencing is not possible the user must issue a user agreement for the new position using the softkey. This means that this position is then designated as safety-relevant.

Note:

SI: Safety Integrated

---

**C30798 SI Motion MM: Test stop running**

**Message value:** -

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The test stop is active.

**Remedy:**

Not necessary.

The message is withdrawn when the test stop is finished.

Note:

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned.

Fault cause:  
1 (= 01 hex):  
Checksum error (CRC error).  
2 (= 02 hex):  
Telegram is shorter than specified in the length byte or in the receive list.  
3 (= 03 hex):  
Telegram is longer than specified in the length byte or in the receive list.  
4 (= 04 hex):  
The length of the receive telegram does not match the receive list.  
5 (= 05 hex):  
The type of the receive telegram does not match the receive list.  
6 (= 06 hex):  
The address of the component in the telegram and in the receive list do not match.  
7 (= 07 hex):  
A SYNC telegram is expected - but the received telegram is not a SYNC telegram.  
8 (= 08 hex):  
No SYNC telegram is expected - but the received telegram is one.  
9 (= 09 hex):  
The error bit in the receive telegram is set.  
16 (= 10 hex):  
The receive telegram is too early.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. Data were not able to be sent.  
Fault cause:  
65 (= 41 hex):  
Telegram type does not match send list.  
Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:** Carry out a POWER ON.

---

**F30837 Power unit DRIVE-CLiQ: Component fault**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.

Fault cause:

32 (= 20 hex):

Error in the telegram header.

35 (= 23 hex):

Receive error: The telegram buffer memory contains an error.

66 (= 42 hex):

Send error: The telegram buffer memory contains an error.

67 (= 43 hex):

Send error: The telegram buffer memory contains an error.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

---

**F30845 Power unit DRIVE-CLiQ: Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned.

Fault cause:

11 (= 0B hex):

Synchronization error during alternating cyclic data transfer.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:** Carry out a POWER ON (power off/on).  
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

---

**F30850 Power unit: Internal software error**

**Message value:** %1

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Vector: OFF1 (NONE, OFF2, OFF3)

**Acknowledge:** POWER ON

**Cause:** An internal software error has occurred in the power unit.

Fault value (r0949, interpret decimal):

Only for internal Siemens troubleshooting.

**Remedy:**

- replace power unit.
- if required, upgrade the firmware in the power unit.
- contact the Hotline.

---

<b>F30851</b>	<b>Power unit DRIVE-CLiQ (CU): Sign-of-life missing</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (NONE, OFF1, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit. Fault cause: 10 (= 0A hex): The sign-of-life bit in the receive telegram is not set. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	Upgrade the firmware of the component involved.

---

<b>A30853</b>	<b>Power unit: Sign-of-life error cyclic data</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The power unit has detected that the cyclic setpoint telegrams of the Control Unit have not been updated on time. At least two sign-of-life errors have occurred within the window set in p7788.
<b>Remedy:</b>	- check the electrical cabinet design and cable routing for EMC compliance - reduce the size of the window (p7788) for monitoring.

---

<b>F30860</b>	<b>Power unit DRIVE-CLiQ (CU): Telegram error</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. Fault cause: 1 (= 01 hex): Checksum error (CRC error). 2 (= 02 hex): Telegram is shorter than specified in the length byte or in the receive list. 3 (= 03 hex): Telegram is longer than specified in the length byte or in the receive list. 4 (= 04 hex): The length of the receive telegram does not match the receive list. 5 (= 05 hex): The type of the receive telegram does not match the receive list. 6 (= 06 hex): The address of the power unit in the telegram and in the receive list do not match. 9 (= 09 hex): The error bit in the receive telegram is set. 16 (= 10 hex): The receive telegram is too early. 17 (= 11 hex): CRC error and the receive telegram is too early. 18 (= 12 hex): The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early. 19 (= 13 hex): The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early. 20 (= 14 hex): The length of the receive telegram does not match the receive list and the receive telegram is too early. 21 (= 15 hex): The type of the receive telegram does not match the receive list and the receive telegram is too early.

22 (= 16 hex):

The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.

25 (= 19 hex):

The error bit in the receive telegram is set and the receive telegram is too early.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
  - check the electrical cabinet design and cable routing for EMC compliance
  - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

**F30875 Power unit DRIVE-CLiQ (CU): Supply voltage failed**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.

Fault cause:

9 (= 09 hex):

The power supply voltage for the components has failed.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the power supply for the DRIVE-CLiQ component.

---

**F30885 CU DRIVE-CLiQ (CU): Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** B\_INF, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. The nodes do not send and receive in synchronism.

Fault cause:

26 (= 1A hex):

Sign-of-life bit in the receive telegram not set and the receive telegram is too early.

33 (= 21 hex):

The cyclic telegram has not been received.

34 (= 22 hex):

Timeout in the telegram receive list.

64 (= 40 hex):

Timeout in the telegram send list.

98 (= 62 hex):

Error at the transition to cyclic operation.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- check the power supply voltage of the component involved.
  - carry out a POWER ON.
  - replace the component involved.
- See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

<b>F30886</b>	<b>PU DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data</b>
<b>Message value:</b>	Component number: %1, fault cause: %2

<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. Data were not able to be sent. Fault cause: 65 (= 41 hex): Telegram type does not match send list. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	Carry out a POWER ON.

---

<b>F30887</b>	<b>Power unit DRIVE-CLiQ (CU): Component fault</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	OFF2
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	Fault detected on the DRIVE-CLiQ component (power unit) involved. Faulty hardware cannot be excluded. Fault cause: 32 (= 20 hex): Error in the telegram header. 35 (= 23 hex): Receive error: The telegram buffer memory contains an error. 66 (= 42 hex): Send error: The telegram buffer memory contains an error. 67 (= 43 hex): Send error: The telegram buffer memory contains an error. 96 (= 60 hex): Response received too late during runtime measurement. 97 (= 61 hex): Time taken to exchange characteristic data too long. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.

---

<b>F30895</b>	<b>PU DRIVE-CLiQ (CU): Alternating cyclic data transfer error</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. Fault cause: 11 (= 0B hex): Synchronization error during alternating cyclic data transfer. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	Carry out a POWER ON. See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

<b>F30896</b>	<b>Power unit DRIVE-CLiQ (CU): Inconsistent component properties</b>
<b>Message value:</b>	Component number: %1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The properties of the DRIVE-CLiQ component (power unit), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced. Fault value (r0949, interpret decimal): Component number.
<b>Remedy:</b>	- carry out a POWER ON. - when a component is replaced, the same component type and if possible the same firmware version should be used. - when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).
<b>F30899 (N, A)</b>	<b>Power unit: Unknown fault</b>
<b>Message value:</b>	New message: %1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	Infeed: NONE (OFF1, OFF2) Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	A fault occurred on the power unit that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Fault value (r0949, interpret decimal): Fault number. Note: If required, the significance of this new fault can be read about in a more recent description of the Control Unit.
<b>Remedy:</b>	- replace the firmware on the power unit by an older firmware version (r0128). - upgrade the firmware on the Control Unit (r0018).
Reaction upon N:	NONE

**F30907      Power unit: FPGA configuration unsuccessful**

**Message value:** -  
**Drive object:** B\_INF  
**Reaction:** OFF2 (NONE, OFF1)  
**Acknowledge:** IMMEDIATELY  
**Cause:** During initialization within the power unit, an internal software error has occurred.  
**Remedy:** - if required, upgrade the firmware in the power unit.  
- replace power unit.  
- contact the Hotline.

---

**A30920 (F)      Power unit: Temperature sensor fault**

**Message value:** %1  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When evaluating the temperature sensor, an error occurred.  
Alarm value (r2124, interpret decimal):  
1: Wire breakage or sensor not connected (KTY: R > 1630 Ohm, PT100: R > 375 Ohm).  
2: Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm, PT100: R < 30 Ohm).  
Note:  
A temperature sensor is connected to the following terminals:  
- "Booksize" format: X21.1/.2 or X22.1/.2  
- "Chassis" format: X41.4/.3  
Information on temperature sensors is provided in the following literature for example:  
SINAMICS S120 Function Manual Drive Functions  
**Remedy:** - make sure that the sensor is connected correctly.  
- replace the sensor.  
Reaction upon F: Infeed: NONE (OFF1, OFF2)

**F31100 (N, A) Encoder 1: Zero mark distance error**

**Message value:** %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** Infeed: NONE (OFF1, OFF2)  
Vector: ENCODER (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The measured zero mark distance does not correspond to the parameterized zero mark distance.  
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.  
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).  
Fault value (r0949, interpret decimal):  
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).  
The sign designates the direction of motion when detecting the zero mark distance.  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- check that the encoder cables are routed in compliance with EMC.  
- check the plug connections  
- check the encoder type (encoder with equidistant zero marks).  
- adapt the parameter for the distance between zero marks (p0424, p0425).  
- if message output above speed threshold, reduce filter time if necessary (p0438).  
- replace the encoder or encoder cable  
Reaction upon N: NONE  
Acknowl. upon N: NONE  
Reaction upon A: NONE  
Acknowl. upon A: NONE

---

**F31101 (N, A) Encoder 1: Zero mark failed**

**Message value:** %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** Infeed: NONE (OFF1, OFF2)  
Vector: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The 1.5 x parameterized zero mark distance was exceeded.  
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).  
Fault value (r0949, interpret decimal):  
Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- check that the encoder cables are routed in compliance with EMC.  
- check the plug connections  
- check the encoder type (encoder with equidistant zero marks).  
- adapt the parameter for the clearance between zero marks (p0425).  
- if message output above speed threshold, reduce filter time if necessary (p0438).  
- when p0437.1 is active, check p4686.  
- replace the encoder or encoder cable

<b>F31115 (N, A)</b>	<b>Encoder 1: Amplitude error track A or B (<math>A^2 + B^2</math>)</b>
<b>Message value:</b>	A track: %1, B-track: %2
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: NONE Vector: ENCODER (IASC/DCBRAKE, NONE)
<b>Acknowledge:</b>	PULSE INHIBIT
<b>Cause:</b>	The amplitude (root of $A^2 + B^2$ ) for encoder 1 exceeds the permissible tolerance. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex: yyyy = Signal level, track B (16 bits with sign). xxxx = Signal level, track A (16 bits with sign). The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %). The response thresholds are < 170 mV (observe the frequency response of the encoder) and > 750 mV.

A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

Note for sensors modules for resolvers (e. g. SMC10):

The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.

A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.

Note:

The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

- check that the encoder cables and shielding are routed in compliance with EMC.
  - check the plug connections
  - replace the encoder or encoder cable
  - check the Sensor Module (e.g. contacts).
- The following applies to measuring systems without their own bearing system:
- adjust the scanning head and check the bearing system of the measuring wheel.
- The following applies for measuring systems with their own bearing system:
- ensure that the encoder housing is not subject to any axial force.

**F31117 (N, A) Encoder 1: Inversion error signals A/B/R**

**Message value:** Fault cause: %1 bin

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** Infeed: NONE  
Vector: ENCODER (IASC/DCBRAKE, NONE)

**Acknowledge:** IMMEDIATELY

**Cause:** For a square-wave encoder (bipolar, double ended) signals A\*, B\* and R\* are not inverted with respect to signals A, B and R.

Fault value (r0949, interpret binary):  
 Bits 0 ... 15: Only for internal Siemens troubleshooting.  
 Bit 16: Error track A.  
 Bit 17: Error track B.  
 Bit 18: Error track R.  
 Note:  
 For SMC30 (order no.. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), CUA32, and CU310, the following applies:  
 A square-wave encoder without track R is used and track monitoring (p0405.2 = 1) is activated.  
 See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

- Check the encoder/cable.
- Does the encoder supply signals and the associated inverted signals?

Note:  
 For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), the following applies:  
 - check the setting of p0405 (p0405.2 = 1 is only possible if the encoder is connected at X520).  
 For a square-wave encoder without track R, the following jumpers must be set for the connection at X520 (SMC30) or X23 (CUA32, CU310):  
 - pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)  
 - pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

### F31120 (N, A) Encoder 1: Power supply voltage fault

**Message value:** Fault cause: %1 bin  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** Infeed: NONE  
 Vector: ENCODER (IASC/DCBRAKE, NONE)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** A power supply fault was detected for encoder 1.  
 Fault value (r0949, interpret binary):  
 Bit 0: Undervoltage condition on the sense line.  
 Bit 1: Overcurrent condition for the encoder power supply.  
 Bit 2: Overcurrent condition for encoder power supply on cable resolver excitation negative.  
 Bit 3: Overcurrent condition for encoder power supply on cable resolver excitation positive.  
 Bit 4: The 24 V power supply through the Power Module (PM) is overloaded.  
 Bit 5: Overcurrent at the EnDat connection of the converter.

Bit 6: Overvoltage at the EnDat connection of the converter.  
 Bit 7: Hardware fault at the EnDat connection of the converter.  
 Note:  
 If the encoder cables 6FX2002-2EQ00-.... and 6FX2002-2CH00-.... are interchanged, this can result in the encoder being destroyed because the pins of the operating voltage are reversed.  
 See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

Re fault value, bit 0 = 1:  
 - correct encoder cable connected?  
 - check the plug connections of the encoder cable.  
 - SMC30: Check the parameterization (p0404.22).  
 Re fault value, bit 1 = 1:  
 - correct encoder cable connected?  
 - replace the encoder or encoder cable  
 Re fault value, bit 2 = 1:  
 - correct encoder cable connected?  
 - replace the encoder or encoder cable  
 Re fault value, bit 3 = 1:  
 - correct encoder cable connected?  
 - replace the encoder or encoder cable  
 Re fault value, bit 5 = 1:  
 - Measuring unit correctly connected at the converter?  
 - Replace the measuring unit or the cable to the measuring unit.  
 Re fault value, bit 6, 7 = 1:  
 - Replace the defective EnDat 2.2 converter.

**F31123 (N, A) Encoder 1: Signal level A/B unipolar outside tolerance**

**Message value:** Fault cause: %1 bin  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** Infeed: NONE  
Vector: ENCODER (IASC/DCBRAKE, NONE)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The unipolar level (AP/AN or BP/BN) for encoder 1 is outside the permissible tolerance.  
Fault value (r0949, interpret binary):  
Bit 0 = 1: Either AP or AN outside the tolerance.  
Bit 16 = 1: Either BP or BN outside the tolerance.  
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.  
The response thresholds are < 1700 mV and > 3300 mV.  
Note:  
The signal level is not evaluated unless the following conditions are satisfied:  
- Sensor Module properties available (r0459.31 = 1).  
- Monitoring active (p0437.31 = 1).  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.  
- check the plug connections and contacts of the encoder cable.  
- check the short-circuit of a signal cable with mass or the operating voltage.  
- replace the encoder cable.

<b>F31129 (N, A)</b>	<b>Encoder 1: Position difference, hall sensor/track C/D and A/B too large</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: NONE Vector: ENCODER (IASC/DCBRAKE, NONE)
<b>Acknowledge:</b>	PULSE INHIBIT
<b>Cause:</b>	The error for track C/D is greater than $\pm 15^\circ$ mechanical or $\pm 60^\circ$ electrical or the error for the Hall signals is greater than $\pm 60^\circ$ electrical. One period of track C/D corresponds to $360^\circ$ mechanical. One period of the Hall signal corresponds to $360^\circ$ electrical. The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough. After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A31429. Fault value (r0949, interpret decimal): For track C/D, the following applies: Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to $1^\circ$ ). For Hall signals, the following applies: Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to $1^\circ$ ). See also: p0491 (Motor encoder fault response ENCODER)
<b>Remedy:</b>	- track C or D not connected. - correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D. - check that the encoder cables are routed in compliance with EMC. - check the adjustment of the Hall sensor.

**A31400 (F, N) Encoder 1: Alarm threshold zero mark distance error**

**Message value:** %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The measured zero mark distance does not correspond to the parameterized zero mark distance.  
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.  
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).  
Alarm value (r2124, interpret decimal):  
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).  
The sign designates the direction of motion when detecting the zero mark distance.

**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable

**A31414 (F, N) Encoder 1: Amplitude error track C or D ( $C^2 + D^2$ )**

**Message value:** C track: %1, D track: %2  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The amplitude ( $C^2 + D^2$ ) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.  
 Alarm value (r2124, interpret hexadecimal):  
 yyyxxxx hex:  
 yyyy = Signal level, track D (16 bits with sign).  
 xxxx = Signal level, track C (16 bits with sign).  
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).  
 The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.  
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.  
 Note:  
 If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.  
**Remedy:**  
 - check that the encoder cables are routed in compliance with EMC.  
 - check the plug connections  
 - replace the encoder or encoder cable  
 - check the Sensor Module (e.g. contacts).  
 - check the Hall sensor box  
 Reaction upon F: Infeed: NONE (OFF1, OFF2)

**A31415 (F, N) Encoder 1: Amplitude alarm track A or B ( $A^2 + B^2$ )**

**Message value:** Amplitude: %1, Angle: %2

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The amplitude (root of  $A^2 + B^2$ ) for encoder 1 exceeds the permissible tolerance.  
Alarm value (r2124, interpret hexadecimal):  
yyyyxxxx hex:  
yyyy = Angle  
xxxx = Amplitude, i.e. root from  $A^2 + B^2$  (16 bits without sign)  
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).  
The response threshold is < 230 mV (observe the frequency response of the encoder).  
A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec.  
The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.  
Note for sensors modules for resolvers (e. g. SMC10):  
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms).  
A signal level of 2900 mV peak value corresponds to the numerical value 3333 hex = 13107 dec.  
Note:  
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.  
See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- if the coding disk is soiled or the lighting aged, replace the encoder.

<b>A31431 (F, N)</b>	<b>Encoder 1: Deviation, position incremental/absolute too large</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	When the zero pulse is passed, a deviation in the incremental position was detected.

For equidistant zero marks, the following applies:

- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.

For distance-coded zero marks, the following applies:

- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.

Alarm value (r2124, interpret decimal):

Deviation in quadrants (1 pulse = 4 quadrants).

See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- Clean coding disk or remove strong magnetic fields.

### **A31432 (F, N) Encoder 1: Rotor position adaptation corrects deviation**

**Message value:** %1

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** For track A/B, pulses have been lost or too many have been counted. These pulses are presently being corrected.  
Alarm value (r2124, interpret decimal):  
Last measured deviation of zero mark in increments (4 increments = 1 encoder pulse).  
The sign designates the direction of motion when detecting the zero mark distance.

**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check encoder limit frequency.
- adapt the parameter for the distance between zero marks (p0424, p0425).

<b>A31443 (F, N)</b>	<b>Encoder 1: Unipolar CD signal level outside specification</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The unipolar level (CP/CN or DP/DN) for encoder 1 is outside the permissible tolerance. Alarm value (r2124, interpret binary): Bit 0 = 1: Either CP or CN outside the tolerance. Bit 16 = 1: Either DP or DN outside the tolerance. The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV. The response thresholds are < 1700 mV and > 3300 mV. Note: The signal level is not evaluated unless the following conditions are satisfied: - Sensor Module properties available (r0459.31 = 1). - Monitoring active (p0437.31 = 1). See also: p0491 (Motor encoder fault response ENCODER)
<b>Remedy:</b>	- check that the encoder cables and shielding are routed in compliance with EMC. - check the plug connections and contacts of the encoder cable. - are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)? - replace the encoder cable.

<b>F31500 (N, A)</b>	<b>Encoder 1: Position tracking traversing range exceeded</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: OFF1 (NONE, OFF2) Vector: OFF1 (NONE, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions. For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421. For p0411.3 = 1, the maximum traversing range for the configured linear axis is pre-set (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).
<b>Remedy:</b>	The fault should be resolved as follows: - select encoder commissioning (p0010 = 4). - reset the position tracking as follows (p0411.2 = 1). - de-select encoder commissioning (p0010 = 0). The fault should then be acknowledged and the absolute encoder adjusted.

**A31811 (F, N) Encoder 1: Encoder serial number changed**

**Message value:** -

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The serial number of the motor encoder of a synchronous motor has changed. The change was only checked for encoders with serial number (e.g. EnDat encoders) and build-in motors (e.g. p0300 = 401) or third-party motors (p0300 = 2).  
Cause 1:  
- The encoder was replaced.  
Cause 2:  
- A third-party, built-in or linear motor was re-commissioned.  
Cause 3:  
- The motor with integrated and adjusted encoder was replaced.  
Cause 4:  
- The firmware was updated to a version that checks the encoder serial number.  
Note:  
With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).  
When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).  
Proceed as follows to hide serial number monitoring:  
- set the following serial numbers for the corresponding Encoder Data Set: p0441= FF, p0442 = 0, p0443 = 0, p0444 = 0, p0445 = 0.  
- parameterize F07414 as message type N (p2118, p2119).  
See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:** Re causes 1, 2:  
Carry out an automatic adjustment using the pole position identification routine. Acknowledge fault. Initiate the pole position identification routine with p1990 = 1. Then check that the pole position identification routine is correctly executed.  
SERVO:  
If a pole position identification technique is selected in p1980, and if p0301 does not contain a motor type with an encoder adjusted in the factory, then p1990 is automatically activated.  
or  
Set the adjustment via p0431. In this case, the new serial number is automatically accepted.  
or  
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.  
Re causes 3, 4:  
Accept the new serial number with p0440 = 1.

<b>F31905 (N, A)</b>	<b>Encoder 1: Parameterization error</b>
<b>Message value:</b>	Parameter: %1, supplementary information: %2
<b>Drive object:</b>	B_INF, ENC, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A parameter of encoder 1 was detected as being incorrect. It is possible that the parameterized encoder type does not match the connected encoder. The parameter involved can be determined as follows: - determine the parameter number using the fault value (r0949). - determine the parameter index (p0187). Fault value (r0949, interpret decimal): yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter xxxx = 421: For an EnDat/SSI encoder, the absolute position in the protocol must be less than or equal to 30 bits. yyyy = 0: No information available. yyyy = 1: The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <-> -A/B (p0405.2 = 1). yyyy = 2: A code number for an identified encoder has been entered into p0400, however, no identification was carried out. Please start a new encoder identification. yyyy = 3: A code number for an identified encoder has been entered into p0400, however, no identification was carried out. Please select a listed encoder in p0400 with a code number < 10000. yyyy = 4: This component does not support SSI encoders (p0404.9 = 1) without track A/B. yyyy = 5: For SQW encoder, value in p4686 greater than in p0425. yyyy = 6: DRIVE-CLiQ encoder cannot be used with this firmware version. yyyy = 7: For an SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks. yyyy = 8: The motor pole pair width is not supported by the linear scale being used. yyyy = 9: The length of the position in the EnDat protocol may be a maximum of 32 bits. yyyy = 10: The connected encoder is not supported. See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number = 314:
- check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 \* p0433) / p0432 <= 1000).

**F31912 Encoder 1: Device combination is not permissible**

**Message value:** %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** Infeed: ENCODER (NONE)  
 Vector: ENCODER (IASC/DCBRAKE, NONE)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The selected device combination is not supported.  
 Fault value (r0949, interpret decimal):  
 1003:  
 The connected measuring unit cannot be operated with the EnDat 2.2 converter. For instance, the measuring unit has a pulse number/resolution of 2^n.  
 1005:  
 The type of measuring unit (incremental) is not supported by the EnDat 2.2 converter.  
 1006:  
 The maximum duration (31.25 µs) of the EnDat transfer was exceeded.  
 2001:  
 The set combination of current controller cycle, DP cycle and Safety cycle is not supported by the EnDat 2.2 converter.  
 2002:  
 The resolution of the linear measuring unit does not match the pole pair width of the linear motor

**Remedy:** Re fault value = 1003, 1005, 1006:  
 - Use a measuring unit that is permissible.  
 For fault value = 2001:  
 - Set a permissible cycle combination (if required, use standard settings).  
 For fault value = 2002:  
 - Use a measuring unit with a lower resolution (p0422).

---

**A31915 (F, N) Encoder 1: Configuration error**

**Message value:** %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The configuration for encoder 1 is incorrect.  
 Alarm value (r2124, interpret decimal):  
 1:  
 Re-parameterization between fault/alarm is not permissible.  
 419:  
 When the fine resolution Gx\_XIST2 is configured, the encoder identifies a maximum possible absolute position actual value (r0483) that can no longer be represented within 32 bits.

**Remedy:** Re alarm value = 1:  
 No re-parameterization between fault/alarm.  
 Re alarm value = 419:  
 Reduce the fine resolution (p0419) or deactivate the monitoring (p0437.25), if the complete multiturn range is not required.

1 (= 01 hex):  
Wire breakage or sensor not connected (KTY: R > 1630 Ohm).  
2 (= 02 hex):  
Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).  
Additional values:  
Only for internal Siemens troubleshooting.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = channel number, xx = error cause  
See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**

- check that the encoder cable is the correct type and is correctly connected.
- check the temperature sensor selection in p0600 to p0603.
- replace the Sensor Module (hardware defect or incorrect calibration data).

**A31930 (N)      Encoder 1: Data logger has saved data**

**Message value:** -

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** For the activated function "Data logger" (p0437.0 = 1) a fault has occurred with the Sensor Module. This alarm indicates that the diagnostics data corresponding to the fault was saved on the memory card.  
The diagnostics data is saved in the following folder:  
/USER/SINAMICS/DATA/SMTRC00.BIN  
...  
/USER/SINAMICS/DATA/SMTRC07.BIN  
/USER/SINAMICS/DATA/SMTRCIDX.TXT  
The following information is contained in the TXT file:  
- Display of the last written BIN file.  
- Number of write operations that are still possible (from 10000 downwards).  
Note:  
Only Siemens can evaluate the BIN files.

**Remedy:** Not necessary.  
The alarm disappears automatically.  
The data logger is ready to record the next fault case.

Reaction upon N: NONE

Acknowl. upon N: NONE

**A31940 (F, N)      Encoder 1: Spindle sensor S1 voltage incorrect**

**Message value:** %1

**Drive object:** B\_INF, ENC, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The voltage of analog sensor S1 is outside the permissible range.  
Fault value (r0949, interpret decimal):  
Signal level from sensor S1.  
Note:  
A signal level of 500 mV corresponds to the numerical value 500 dec.

**Remedy:**

- Check the clamped tool.
- Check the tolerance and if required, adapt (p5040).
- Check the thresholds and if required, adapt (p5041).
- Check analog sensor S1 and connections.

Reaction upon F: Infeed: NONE (OFF1, OFF2)

**F31950 Encoder 1: Internal software error**

**Message value:** %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** ENCODER (OFF2)  
**Acknowledge:** POWER ON  
**Cause:** An internal software error has occurred.  
Fault value (r0949, interpret decimal):  
The fault value contains information regarding the fault source.  
Only for internal Siemens troubleshooting.  
**Remedy:** - If necessary, upgrade the firmware in the Sensor Module to a later version.  
- contact the Hotline.

---

**A31999 (F, N) Encoder 1: Unknown alarm**

**Message value:** New message: %1  
**Drive object:** B\_INF, ENC, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** A alarm has occurred on the Sensor Module for encoder 1 that cannot be interpreted by the Control Unit firmware.  
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.  
Alarm value (r2124, interpret decimal):  
Alarm number.  
Note:  
If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:** - replace the firmware on the Sensor Module by an older firmware version (r0148).  
- upgrade the firmware on the Control Unit (r0018).  
Reaction upon F: Infeed: NONE (OFF1, OFF2)

**F32100 (N, A) Encoder 2: Zero mark distance error**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The measured zero mark distance does not correspond to the parameterized zero mark distance.  
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.  
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).  
Fault value (r0949, interpret decimal):  
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).  
The sign designates the direction of motion when detecting the zero mark distance.  
**Remedy:** - check that the encoder cables are routed in compliance with EMC.  
- check the plug connections  
- check the encoder type (encoder with equidistant zero marks).  
- adapt the parameter for the distance between zero marks (p0424, p0425).  
- if message output above speed threshold, reduce filter time if necessary (p0438).  
- replace the encoder or encoder cable

Reaction upon N: NONE

**F32101 (N, A) Encoder 2: Zero mark failed**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The 1.5 x parameterized zero mark distance was exceeded.  
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).  
Fault value (r0949, interpret decimal):  
Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).  
**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- when p0437.1 is active, check p4686.
- replace the encoder or encoder cable

---

**F32103 (N, A) Encoder 2: Amplitude error, track R**

**Message value:** R track: %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 2.  
The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is under-shot.  
Fault value (r0949, interpret hexadecimal):  
yyyyxxxx hex: yyyy = 0, xxxx = Signal level, track R (16 bits with sign)  
The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV.  
The response threshold for the differential signal level of the encoder is < -1600 mV.  
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.  
**Note:**  
The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module.  
The fault value can only be represented between -32767 ... 32767 dec (-770 ... 770 mV).  
The signal level is not evaluated unless the following conditions are satisfied:

- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).

**Remedy:**

- check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts of the encoder cable.
- check whether the zero mark is connected and the signal cables RP and RN have been connected correctly
- replace the encoder cable.
- if the coding disk is soiled or the lighting aged, replace the encoder.

<b>F32120 (N, A)</b>	<b>Encoder 2: Power supply voltage fault</b>
<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
<b>Acknowledge:</b>	PULSE INHIBIT
<b>Cause:</b>	<p>A power supply fault was detected for encoder 2.</p> <p>Fault value (r0949, interpret binary):</p> <p>Bit 0: Undervoltage condition on the sense line.</p> <p>Bit 1: Overcurrent condition for the encoder power supply.</p> <p>Bit 2: Overcurrent condition for encoder power supply on cable resolver excitation negative.</p>

Bit 3: Overcurrent condition for encoder power supply on cable resolver excitation positive.

Bit 4: The 24 V power supply through the Power Module (PM) is overloaded.

Bit 5: Overcurrent at the EnDat connection of the converter.

Bit 6: Overvoltage at the EnDat connection of the converter.

Bit 7: Hardware fault at the EnDat connection of the converter.

Note:

If the encoder cables 6FX2002-2EQ00-.... and 6FX2002-2CH00-.... are interchanged, this can result in the encoder being destroyed because the pins of the operating voltage are reversed.

**Remedy:**

Re fault value, bit 0 = 1:

- correct encoder cable connected?
- check the plug connections of the encoder cable.
- SMC30: Check the parameterization (p0404.22).

Re fault value, bit 1 = 1:

- correct encoder cable connected?
- replace the encoder or encoder cable

Re fault value, bit 2 = 1:

- correct encoder cable connected?
- replace the encoder or encoder cable

Re fault value, bit 3 = 1:

- correct encoder cable connected?
- replace the encoder or encoder cable

Re fault value, bit 5 = 1:

- Measuring unit correctly connected at the converter?
- Replace the measuring unit or the cable to the measuring unit.

Re fault value, bit 6, 7 = 1:

- Replace the defective EnDat 2.2 converter.

**F32125 (N, A) Encoder 2: Amplitude error track A or B overcontrolled**

**Message value:** A track: %1, B-track: %2  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The amplitude of track A or B for encoder 2 exceeds the permissible tolerance band.  
Fault value (r0949, interpret hexadecimal):  
yyyyxxxx hex:  
yyyy = Signal level, track B (16 bits with sign).  
xxxx = Signal level, track A (16 bits with sign).  
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).  
The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.  
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.  
Note for sensors modules for resolvers (e. g. SMC10):  
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.  
A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.  
Note:  
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.  
**Remedy:**  
- check that the encoder cables and shielding are routed in compliance with EMC.  
- replace the encoder or encoder cable

**F32126 (N, A) Encoder 2: Amplitude AB too high**

**Message value:** Amplitude: %1, Angle: %2  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The amplitude ( $\sqrt{A^2 + B^2}$  or  $|A| + |B|$ ) for encoder 2 exceeds the permissible tolerance.

Fault value (r0949, interpret hexadecimal):  
 yyyxxxx hex:  
 yyyy = Angle  
 xxxx = Amplitude, i.e. root from  $A^2 + B^2$  (16 bits without sign)  
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).  
 The response threshold for  $(|A| + |B|)$  is  $> 1120$  mV or the root of  $(A^2 + B^2) > 955$  mV.  
 A signal level of 500 mV peak value corresponds to the numerical value of 299A hex = 10650 dec.  
 The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.  
 Note:  
 The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**

- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable

### F32129 (N, A) Encoder 2: Position difference, hall sensor/track C/D and A/B too large

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The error for track C/D is greater than  $\pm 15^\circ$  mechanical or  $\pm 60^\circ$  electrical or the error for the Hall signals is greater than  $\pm 60^\circ$  electrical.  
 One period of track C/D corresponds to  $360^\circ$  mechanical.  
 One period of the Hall signal corresponds to  $360^\circ$  electrical.  
 The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.  
 After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A32429.  
 Fault value (r0949, interpret decimal):  
 For track C/D, the following applies:  
 Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to  $1^\circ$ ).  
 For Hall signals, the following applies:  
 Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to  $1^\circ$ ).

**Remedy:**

- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

### F32130 (N, A) Encoder 2: Zero mark and position error from the coarse synchronization

**Message value:** Angular deviation, electrical: %1, angle, mechanical: %2  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out.  
 When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of  $\pm 18^\circ$  mechanical.  
 When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of  $\pm 60^\circ$  electrical.

Fault value (r0949, interpret hexadecimal):  
 yyyyyxxx hex  
 yyyy: Determined mechanical zero mark position (can only be used for track C/D).  
 xxxx: Deviation of the zero mark from the expected position as electrical angle.  
 Scaling: 32768 dec = 180 °

**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- if the Hall sensor is used as an equivalent for track C/D, check the connection.
- Check the connection of track C or D.
- replace the encoder or encoder cable

Reaction upon N: NONE

### **F32131 (N, A) Encoder 2: Deviation, position incremental/absolute too large**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** Absolute encoder:  
 When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected.  
 Limit value for the deviation:  
 - EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants).  
 - other encoders: 15 pulses = 60 quadrants.  
 Incremental encoder:  
 When the zero pulse is passed, a deviation in the incremental position was detected.  
 For equidistant zero marks, the following applies:  
 - The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.  
 For distance-coded zero marks, the following applies:  
 - the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.  
 Fault value (r0949, interpret decimal):  
 Deviation in quadrants (1 pulse = 4 quadrants).

**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check whether the coding disk is dirty or there are strong ambient magnetic fields.
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).

<b>A32400 (F, N)</b>	<b>Encoder 2: Alarm threshold zero mark distance error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Alarm value (r2124, interpret decimal): Last measured zero mark distance in increments (4 increments = 1 encoder pulse). The sign designates the direction of motion when detecting the zero mark distance.
<b>Remedy:</b>	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - check the encoder type (encoder with equidistant zero marks). - adapt the parameter for the distance between zero marks (p0424, p0425). - replace the encoder or encoder cable

**A32421 (F, N) Encoder 2: Coarse position error**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.

Alarm value (r2124, interpret decimal):

3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

**Remedy:**

Re alarm value = 3:

- For a standard encoder with cable, contact the manufacturer where relevant.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A\* and B with B\*) or, for a programmable encoder, check the zero offset of the position.

**A32422 (F, N) Encoder 2: Pulses per revolution square-wave encoder outside tolerance bandwidth**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The measured zero mark distance does not correspond to the parameterized zero mark distance.  
This alarm is triggered with active square-wave encoder PPR correction and re-parameterized fault 31131 if the accumulator contains larger values than p4683 or p4684.  
The zero mark distance for zero mark monitoring is set in p0425 (rotary encoder).  
Alarm value (r2124, interpret decimal):  
accumulated differential pulses in encoder pulses.

**Remedy:**

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable

**A32429 (F, N) Encoder 2: Position difference, hall sensor/track C/D and A/B too large**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.  
One period of track C/D corresponds to 360 ° mechanical.  
One period of the Hall signal corresponds to 360 ° electrical.  
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.  
Alarm value (r2124, interpret decimal):  
For track C/D, the following applies:  
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).  
For Hall signals, the following applies:  
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

**Remedy:**

- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

**A32431 (F, N) Encoder 2: Deviation, position incremental/absolute too large**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** When the zero pulse is passed, a deviation in the incremental position was detected.  
For equidistant zero marks, the following applies:  
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.  
For distance-coded zero marks, the following applies:  
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.  
Alarm value (r2124, interpret decimal):  
Deviation in quadrants (1 pulse = 4 quadrants).

**Remedy:**  
- check that the encoder cables are routed in compliance with EMC.  
- check the plug connections  
- replace the encoder or encoder cable  
- Clean coding disk or remove strong magnetic fields.

**F32500 (N, A)      Encoder 2: Position tracking traversing range exceeded**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.

For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421. For p0411.3 = 1, the maximum traversing range for the configured linear axis is pre-set (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

**Remedy:** The fault should be resolved as follows:  
 - select encoder commissioning (p0010 = 4).  
 - reset the position tracking as follows (p0411.2 = 1).  
 - de-select encoder commissioning (p0010 = 0).  
 The fault should then be acknowledged and the absolute encoder adjusted.

<b>F32811 (N, A)</b>	<b>Encoder 2: Encoder serial number changed</b>
<b>Message value:</b>	-
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (NONE, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	<p>The encoder serial number has changed. The change is only checked for encoders with serial number (e.g. EnDat encoders).</p> <p>- The encoder was replaced.</p> <p>Note:</p> <p>With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).</p> <p>When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).</p>

Proceed as follows to hide serial number monitoring:

- set the following serial numbers for the corresponding Encoder Data Set: p0441= FF, p0442 = 0, p0443 = 0, p0444 = 0, p0445 = 0.

**Remedy:** Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.

**F32813 Encoder 2: Hardware logic unit failed**

**Message value:** Fault cause: %1 bin

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

**Acknowledge:** PULSE INHIBIT

**Cause:** The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.

Fault value (r0949, interpret binary):

Bit 0: ALU watchdog has responded.

Bit 1: ALU has detected a sign-of-life error.

**Remedy:** Replace encoder.

---

**F32820 (N, A) Encoder 2 DRIVE-CLiQ: Telegram error**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the encoder concerned.

Fault cause:

1 (= 01 hex):

Checksum error (CRC error).

2 (= 02 hex):

Telegram is shorter than specified in the length byte or in the receive list.

3 (= 03 hex):

Telegram is longer than specified in the length byte or in the receive list.

4 (= 04 hex):

The length of the receive telegram does not match the receive list.

5 (= 05 hex):

The type of the receive telegram does not match the receive list.

6 (= 06 hex):

The address of the component in the telegram and in the receive list do not match.

7 (= 07 hex):

A SYNC telegram is expected - but the received telegram is not a SYNC telegram.

8 (= 08 hex):  
No SYNC telegram is expected - but the received telegram is one.  
9 (= 09 hex):  
The error bit in the receive telegram is set.  
16 (= 10 hex):  
The receive telegram is too early.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

**F32905 (N, A)      Encoder 2: Parameterization error**

**Message value:** Parameter: %1, supplementary information: %2  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A parameter of encoder 2 was detected as being incorrect.  
It is possible that the parameterized encoder type does not match the connected encoder.  
The parameter involved can be determined as follows:  
- determine the parameter number using the fault value (r0949).  
- determine the parameter index (p0187).  
Fault value (r0949, interpret decimal):  
yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter  
xxxx = 421:  
For an EnDat/SSI encoder, the absolute position in the protocol must be less than or equal to 30 bits.  
yyyy = 0:  
No information available.  
yyyy = 1:  
The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <-> -A/B (p0405.2 = 1).  
yyyy = 2:  
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.  
Please start a new encoder identification.  
yyyy = 3:  
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.  
Please select a listed encoder in p0400 with a code number < 10000.

yyyy = 4:  
This component does not support SSI encoders (p0404.9 = 1) without track A/B.  
yyyy = 5:  
For SQW encoder, value in p4686 greater than in p0425.  
yyyy = 6:  
DRIVE-CLiQ encoder cannot be used with this firmware version.  
yyyy = 7:  
For an SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks.  
yyyy = 8:  
The motor pole pair width is not supported by the linear scale being used.  
yyyy = 9:  
The length of the position in the EnDat protocol may be a maximum of 32 bits.  
yyyy = 10:  
The connected encoder is not supported.

**Remedy:**

- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number = 314:
- check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 \* p0433) / p0432 <= 1000).

### F32912 Encoder 2: Device combination is not permissible

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** ENCODER (IASC/DCBRAKE, NONE)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The selected device combination is not supported.  
Fault value (r0949, interpret decimal):  
1003:  
The connected measuring unit cannot be operated with the EnDat 2.2 converter. For instance, the measuring unit has a pulse number/resolution of 2^n.  
1005:  
The type of measuring unit (incremental) is not supported by the EnDat 2.2 converter.  
1006:  
The maximum duration (31.25 µs) of the EnDat transfer was exceeded.  
2001:  
The set combination of current controller cycle, DP cycle and Safety cycle is not supported by the EnDat 2.2 converter.  
2002:  
The resolution of the linear measuring unit does not match the pole pair width of the linear motor

**Remedy:** Re fault value = 1003, 1005, 1006:  
- Use a measuring unit that is permissible.  
For fault value = 2001:  
- Set a permissible cycle combination (if required, use standard settings).  
For fault value = 2002:  
- Use a measuring unit with a lower resolution (p0422).

---

### A32915 (F, N) Encoder 2: Configuration error

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The configuration for encoder 2 is incorrect.  
Alarm value (r2124, interpret decimal):  
1:  
Re-parameterization between fault/alarm is not permissible.

419:

When the fine resolution Gx\_XIST2 is configured, the encoder identifies a maximum possible absolute position actual value (r0483) that can no longer be represented within 32 bits.

**Remedy:**

Re alarm value = 1:

No re-parameterization between fault/alarm.

Re alarm value = 419:

Reduce the fine resolution (p0419) or deactivate the monitoring (p0437.25), if the complete multiturn range is not required.

**F32916 (N, A) Encoder 2: Parameterization fault**

**Message value:** Parameter: %1, supplementary information: %2

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** IMMEDIATELY

**Cause:**

A parameter of encoder 2 was detected as being incorrect.

It is possible that the parameterized encoder type does not match the connected encoder.

The parameter involved can be determined as follows:

- determine the parameter number using the fault value (r0949).

- determine the parameter index (p0187).

Fault value (r0949, interpret decimal):

Parameter number.

Note:

This fault is only output for encoders where r0404.10 = 1 or r0404.11 = 1. It corresponds to A32905 with encoders where r0404.10 = 0 and r0404.11 = 0.

**Remedy:**

- check whether the connected encoder type matches the encoder that has been parameterized.

- correct the parameter specified by the fault value (r0949) and p0187.

**A32920 (F, N) Encoder 2: Temperature sensor fault**

**Message value:** Fault cause: %1, channel number: %2

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**

When evaluating the temperature sensor, an error occurred.

Fault cause:

1 (= 01 hex):

Wire breakage or sensor not connected (KTY: R > 1630 Ohm).

2 (= 02 hex):

Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).

Additional values:

Only for internal Siemens troubleshooting.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = channel number, xx = error cause

**Remedy:**

- check that the encoder cable is the correct type and is correctly connected.

- check the temperature sensor selection in p0600 to p0603.

- replace the Sensor Module (hardware defect or incorrect calibration data).

### F33103 (N, A) Encoder 3: Amplitude error, track R

**Message value:** R track: %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 3. The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is under-shot.  
 Fault value (r0949, interpret hexadecimal):  
 yyyyxxxx hex: yyyy = 0, xxxx = Signal level, track R (16 bits with sign)  
 The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV.  
 The response threshold for the differential signal level of the encoder is < -1600 mV.  
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.  
**Note:**  
 The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module.  
 The fault value can only be represented between -32767 ... 32767 dec (-770 ... 770 mV).  
 The signal level is not evaluated unless the following conditions are satisfied:  
 - Sensor Module properties available (r0459.31 = 1).  
 - Monitoring active (p0437.31 = 1).  
**Remedy:**  
 - check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range  
 - check that the encoder cables and shielding are routed in compliance with EMC.  
 - check the plug connections and contacts of the encoder cable.  
 - check whether the zero mark is connected and the signal cables RP and RN have been connected correctly  
 - replace the encoder cable.  
 - if the coding disk is soiled or the lighting aged, replace the encoder.

<b>F33115 (N, A)</b>	<b>Encoder 3: Amplitude error track A or B (<math>A^2 + B^2</math>)</b>
<b>Message value:</b>	A track: %1, B-track: %2
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
<b>Acknowledge:</b>	PULSE INHIBIT
<b>Cause:</b>	<p>The amplitude (root of <math>A^2 + B^2</math>) for encoder 3 exceeds the permissible tolerance.</p> <p>Fault value (r0949, interpret hexadecimal):</p> <p>yyyyxxxx hex:</p> <p>yyyy = Signal level, track B (16 bits with sign).</p> <p>xxxx = Signal level, track A (16 bits with sign).</p> <p>The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).</p> <p>The response thresholds are &lt; 170 mV (observe the frequency response of the encoder) and &gt; 750 mV.</p>

A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

Note for sensors modules for resolvers (e. g. SMC10):

The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.

A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.

Note:

The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**

- check that the encoder cables and shielding are routed in compliance with EMC.
  - check the plug connections
  - replace the encoder or encoder cable
  - check the Sensor Module (e.g. contacts).
- The following applies to measuring systems without their own bearing system:
- adjust the scanning head and check the bearing system of the measuring wheel.
- The following applies for measuring systems with their own bearing system:
- ensure that the encoder housing is not subject to any axial force.

**F33122 Encoder 3: Internal power supply voltage faulty**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** ENCODER  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault in internal reference voltage of ASICs for encoder 3.  
Fault value (r0949, interpret decimal):  
1: Reference voltage error.  
2: Internal undervoltage.  
3: Internal overvoltage.  
**Remedy:** Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

---

**F33123 (N, A) Encoder 3: Signal level A/B unipolar outside tolerance**

**Message value:** Fault cause: %1 bin  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The unipolar level (AP/AN or BP/BN) for encoder 3 is outside the permissible tolerance.  
Fault value (r0949, interpret binary):  
Bit 0 = 1: Either AP or AN outside the tolerance.  
Bit 16 = 1: Either BP or BN outside the tolerance.  
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.  
The response thresholds are < 1700 mV and > 3300 mV.

Note:

The signal level is not evaluated unless the following conditions are satisfied:

- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).

**Remedy:**

- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
- check the plug connections and contacts of the encoder cable.
- check the short-circuit of a signal cable with mass or the operating voltage.
- replace the encoder cable.

**F33125 (N, A) Encoder 3: Amplitude error track A or B overcontrolled**

**Message value:** A track: %1, B-track: %2

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** PULSE INHIBIT

**Cause:** The amplitude of track A or B for encoder 3 exceeds the permissible tolerance band.

Fault value (r0949, interpret hexadecimal):

yyyyxxxx hex:

yyyy = Signal level, track B (16 bits with sign).

xxxx = Signal level, track A (16 bits with sign).

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).

The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.

A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

Note for sensors modules for resolvers (e. g. SMC10):

The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.

A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.

Note:

The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**

- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable

**F33126 (N, A) Encoder 3: Amplitude AB too high**

**Message value:** Amplitude: %1, Angle: %2

**Drive object:** VECTOR\_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** PULSE INHIBIT

**Cause:** The amplitude (root of  $A^2 + B^2$  or  $|A| + |B|$ ) for encoder 3 exceeds the permissible tolerance.

Fault value (r0949, interpret hexadecimal):

yyyyxxxx hex:

yyyy = Angle

xxxx = Amplitude, i.e. root from  $A^2 + B^2$  (16 bits without sign)

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).

The response threshold for  $(|A| + |B|)$  is > 1120 mV or the root of  $(A^2 + B^2)$  > 955 mV.

A signal level of 500 mV peak value corresponds to the numerical value of 299A hex = 10650 dec.

The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.

Note:

The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**

- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable

**A33400 (F, N) Encoder 3: Alarm threshold zero mark distance error**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The measured zero mark distance does not correspond to the parameterized zero mark distance.  
 For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.  
 The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).  
 Alarm value (r2124, interpret decimal):  
 Last measured zero mark distance in increments (4 increments = 1 encoder pulse).  
 The sign designates the direction of motion when detecting the zero mark distance.

**Remedy:** - check that the encoder cables are routed in compliance with EMC.  
 - check the plug connections  
 . check the encoder type (encoder with equidistant zero marks).  
 - adapt the parameter for the distance between zero marks (p0424, p0425).  
 - replace the encoder or encoder cable

<b>Message value:</b>	Fault cause: %1 bin
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	Serial communication protocol transfer error between the encoder and evaluation module. Alarm value (r2124, interpret binary): Bit 0: Alarm bit in the position protocol. Bit 1: Incorrect quiescent level on the data line. Bit 2: Encoder does not respond (does not supply a start bit within 50 ms). Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data. Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it. Bit 5: Internal error in the serial driver: An illegal mode command was requested. Bit 6: Timeout when cyclically reading. Bit 8: Protocol is too long (e.g. > 64 bits). Bit 9: Receive buffer overflow. Bit 10: Frame error when reading twice. Bit 11: Parity error. Bit 12: Data line signal level error during the monoflop time.
<b>Remedy:</b>	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - replace encoder.

<b>A33421 (F, N)</b>	<b>Encoder 3: Coarse position error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.

Alarm value (r2124, interpret decimal):

3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

**Remedy:**

Re alarm value = 3:

- For a standard encoder with cable, contact the manufacturer where relevant.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A\* and B with B\*) or, for a programmable encoder, check the zero offset of the position.

**A33429 (F, N) Encoder 3: Position difference, hall sensor/track C/D and A/B too large**

**Message value:** %1

**Drive object:** VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.  
One period of track C/D corresponds to 360 ° mechanical.  
One period of the Hall signal corresponds to 360 ° electrical.  
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.

Alarm value (r2124, interpret decimal):

For track C/D, the following applies:

Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).

For Hall signals, the following applies:

Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

**Remedy:**

- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

**F33500 (N, A) Encoder 3: Position tracking traversing range exceeded**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.

For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421. For p0411.3 = 1, the maximum traversing range for the configured linear axis is pre-set (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

**Remedy:** The fault should be resolved as follows:  
 - select encoder commissioning (p0010 = 4).  
 - reset the position tracking as follows (p0411.2 = 1).  
 - de-select encoder commissioning (p0010 = 0).  
 The fault should then be acknowledged and the absolute encoder adjusted.

**Message value:** Fault cause: %1 bin  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.  
 Fault value (r0949, interpret binary):  
 Bit x = 1: Effectivity test x unsuccessful.

**Remedy:** Replace encoder.

---

**N33800 (F) Encoder 3: Group signal**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** NONE  
**Cause:** The motor encoder has detected at least one fault.  
**Remedy:** Evaluate the other messages that are presently available.

Reaction upon F: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
 Acknowl. upon F: IMMEDIATELY

---

**F33801 (N, A) Encoder 3 DRIVE-CLiQ: Sign-of-life missing**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the encoder involved.  
 Fault cause:  
 10 (= 0A hex):  
 The sign-of-life bit in the receive telegram is not set.  
 Note regarding the message value:  
 The individual information is coded as follows in the message value (r0949/r2124):  
 0000yyxx hex: yy = component number, xx = error cause

**Remedy:**  
 - check the electrical cabinet design and cable routing for EMC compliance  
 - replace the component involved.

**F33802 (N, A) Encoder 3: Time slice overflow**

**Message value:** %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A time slice overflow has occurred in encoder 3.

Fault value (r0949, interpret hexadecimal):  
 yx hex: y = function involved (Siemens-internal fault diagnostics), x = time slice involved  
 x = 9:  
 Time slice overflow of the fast (current controller clock cycle) time slice.  
 x = A:  
 Time slice overflow of the average time slice.  
 x = C:  
 Time slice overflow of the slow time slice.  
 yx = 3E7:  
 Timeout when waiting for SYNO (e.g. unexpected return to non-cyclic operation).

**Remedy:** Increase the current controller sampling time  
 Note:  
 For a current controller sampling time = 31.25 µs, use an SMx20 with order number 6SL3055-0AA00-5xA3.

**F33896 (N, A) Encoder 3 DRIVE-CLiQ (CU): Inconsistent component properties**

**Message value:** Component number: %1  
**Drive object:** VECTOR\_G  
**Reaction:** OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The properties of the DRIVE-CLiQ component (Sensor Module for encoder 3), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.  
Fault value (r0949, interpret decimal):  
Component number.

**Remedy:**

- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

<b>F33916 (N, A)</b>	<b>Encoder 3: Parameterization fault</b>
<b>Message value:</b>	Parameter: %1, supplementary information: %2
<b>Drive object:</b>	VECTOR_G
<b>Reaction:</b>	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A parameter of encoder 3 was detected as being incorrect. It is possible that the parameterized encoder type does not match the connected encoder. The parameter involved can be determined as follows: - determine the parameter number using the fault value (r0949). - determine the parameter index (p0187). Fault value (r0949, interpret decimal): Parameter number. Note: This fault is only output for encoders where r0404.10 = 1 or r0404.11 = 1. It corresponds to A33905 with encoders where r0404.10 = 0 and r0404.11 = 0.
<b>Remedy:</b>	- check whether the connected encoder type matches the encoder that has been parameterized. - correct the parameter specified by the fault value (r0949) and p0187.

**A33920 (F, N) Encoder 3: Temperature sensor fault**

**Message value:** Fault cause: %1, channel number: %2  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** When evaluating the temperature sensor, an error occurred.  
Fault cause:  
1 (= 01 hex):  
Wire breakage or sensor not connected (KTY: R > 1630 Ohm).  
2 (= 02 hex):  
Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).  
Additional values:  
Only for internal Siemens troubleshooting.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = channel number, xx = error cause  
**Remedy:**  
- check that the encoder cable is the correct type and is correctly connected.  
- check the temperature sensor selection in p0600 to p0603.  
- replace the Sensor Module (hardware defect or incorrect calibration data).

**A33930 (N) Encoder 3: Data logger has saved data**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** For the activated function "Data logger" (p0437.0 = 1) a fault has occurred with the Sensor Module. This alarm indicates that the diagnostics data corresponding to the fault was saved on the memory card.  
The diagnostics data is saved in the following folder:  
/USER/SINAMICS/DATA/SMTRC00.BIN  
...  
/USER/SINAMICS/DATA/SMTRC07.BIN  
/USER/SINAMICS/DATA/SMTRCIDX.TXT  
The following information is contained in the TXT file:  
- Display of the last written BIN file.  
- Number of write operations that are still possible (from 10000 downwards).  
Note:  
Only Siemens can evaluate the BIN files.  
**Remedy:** Not necessary.  
The alarm disappears automatically.  
The data logger is ready to record the next fault case.

<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	Infeed: OFF1 (NONE, OFF2) Vector: OFF1 (NONE, OFF2, OFF3)
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	An internal software error in the Voltage Sensing Module (VSM) has occurred. Fault value (r0949, interpret decimal): 1: Background time slice is blocked. 2: Checksum over the code memory is not OK.
<b>Remedy:</b>	- replace the Voltage Sensing Module (VSM). - if required, upgrade the firmware in the Voltage Sensing Module. - contact the Hotline.
<b>F34851</b>	<b>VSM DRIVE-CLiQ (CU): Sign-of-life missing</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit. The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit. Fault cause: 10 (= 0A hex): The sign-of-life bit in the receive telegram is not set. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	Upgrade the firmware of the component involved.
<b>F34860</b>	<b>VSM DRIVE-CLiQ (CU): Telegram error</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit.

Fault cause:  
 1 (= 01 hex):  
 Checksum error (CRC error).  
 2 (= 02 hex):  
 Telegram is shorter than specified in the length byte or in the receive list.  
 3 (= 03 hex):  
 Telegram is longer than specified in the length byte or in the receive list.  
 4 (= 04 hex):  
 The length of the receive telegram does not match the receive list.  
 5 (= 05 hex):  
 The type of the receive telegram does not match the receive list.  
 6 (= 06 hex):  
 The address of the power unit in the telegram and in the receive list do not match.  
 9 (= 09 hex):  
 The error bit in the receive telegram is set.  
 16 (= 10 hex):  
 The receive telegram is too early.  
 17 (= 11 hex):  
 CRC error and the receive telegram is too early.  
 18 (= 12 hex):  
 The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.  
 19 (= 13 hex):  
 The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.  
 20 (= 14 hex):  
 The length of the receive telegram does not match the receive list and the receive telegram is too early.  
 21 (= 15 hex):  
 The type of the receive telegram does not match the receive list and the receive telegram is too early.  
 22 (= 16 hex):  
 The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.  
 25 (= 19 hex):  
 The error bit in the receive telegram is set and the receive telegram is too early.  
 Note regarding the message value:  
 The individual information is coded as follows in the message value (r0949/r2124):  
 0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

<b>F34886</b>	<b>VSM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit. Data were not able to be sent. Fault cause: 65 (= 41 hex): Telegram type does not match send list. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	Carry out a POWER ON.

---

<b>F34887</b>	<b>VSM DRIVE-CLiQ (CU): Component fault</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	Fault detected on the DRIVE-CLiQ component (Voltage Sensing Module) involved. Faulty hardware cannot be excluded. Fault cause: 32 (= 20 hex): Error in the telegram header. 35 (= 23 hex): Receive error: The telegram buffer memory contains an error.

66 (= 42 hex):  
Send error: The telegram buffer memory contains an error.  
67 (= 43 hex):  
Send error: The telegram buffer memory contains an error.  
96 (= 60 hex):  
Response received too late during runtime measurement.  
97 (= 61 hex):  
Time taken to exchange characteristic data too long.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

<b>F34895</b>	<b>VSM DRIVE-CLiQ (CU): Alternating cyclic data transfer error</b>
<b>Message value:</b>	Component number: %1, fault cause: %2
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit. Fault cause: 11 (= 0B hex): Synchronization error during alternating cyclic data transfer. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause
<b>Remedy:</b>	Carry out a POWER ON. See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

<b>F34896</b>	<b>VSM DRIVE-CLiQ (CU): Inconsistent component properties</b>
<b>Message value:</b>	Component number: %1
<b>Drive object:</b>	B_INF, TM150, TM31, VECTOR_G
<b>Reaction:</b>	Infeed: OFF2 (NONE, OFF1) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The properties of the DRIVE-CLiQ component (Voltage Sensing Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced. Fault value (r0949, interpret decimal): Component number.
<b>Remedy:</b>	- carry out a POWER ON. - when a component is replaced, the same component type and if possible the same firmware version should be used. - when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

<b>F34899 (N, A)</b>	<b>VSM: Unknown fault</b>
<b>Message value:</b>	New message: %1
<b>Drive object:</b>	B_INF, VECTOR_G
<b>Reaction:</b>	Infeed: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2, OFF3)
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	A fault occurred on the Voltage Sensing Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit.

Fault value (r0949, interpret decimal):

Fault number.

Note:

If required, the significance of this new fault can be read about in a more recent description of the Control Unit.

**Remedy:** - replace the firmware on the Voltage Sensing Module by an older firmware version (r0158).  
- upgrade the firmware on the Control Unit (r0018).

<b>F35000</b>	<b>TM54F: Sampling time invalid</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	POWER ON
<b>Cause:</b>	The set sampling time is invalid. - not a multiple integer of the DP clock cycle. Fault value (r0949, floating point): Recommended valid sampling time.
<b>Remedy:</b>	Adapt the sampling time (e.g. set the recommended valid sampling time). See also: p10000 (SI sampling time)

---

<b>F35001</b>	<b>TM54F: Parameter value invalid</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	The entered value is invalid. Fault value (r0949, interpret decimal): Parameter number with the invalid value.
<b>Remedy:</b>	Correct the parameter value.

---

<b>F35002</b>	<b>TM54F: Commissioning not possible</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The commissioning mode activation was rejected because the pulses had not been suppressed for at least one drive belonging to the TM54F. Fault value (r0949, interpret decimal): Drive object number of the first drive found without pulse suppression.
<b>Remedy:</b>	Set pulse suppression for the drive specified in the fault value.

---

<b>F35003</b>	<b>TM54F: Acknowledgement on the Control Unit is required</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	A fault on the Terminal Module 54F (TM54) was acknowledged using the safe acknowledgement (P10006). An additional acknowledgement is also required at the Control Unit.
<b>Remedy:</b>	Acknowledge the fault at the Control Unit.

<b>F35011</b>	<b>TM54F: Drive object number assignment illegal</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	A drive object number was assigned twice. Each drive object number can be assigned only once.
<b>Remedy:</b>	Correct the assignment of the drive object numbers. See also: p10010 (SI drive object assignment)
<b>A35012</b>	<b>TM54F: Test stop active</b>
<b>Message value:</b>	-
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	NONE
<b>Cause:</b>	The test stop for the Terminal Module 54F (TM54F) is presently being executed. Note: Fault F35013 is output if a fault occurs during the test stop.
<b>Remedy:</b>	The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.
<b>F35013</b>	<b>TM54F: Test stop error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY (POWER ON)
<b>Cause:</b>	An error was detected when carrying out the test stop on the TM54F. Failsafe control signals (failsafe values) are transferred to the safety functions. Fault value (r0949, interpret hexadecimal): aaaabbcc hex: aaaa: DO or F-DI (dependent on test step cc), where the expected state was not assumed (bit 0 = F-DI 0 or F-DO 0, bit 1 = F-DI 1 or F-DO 1, etc.). bb: Fault cause bb = 01 hex: Internal fault. bb = 02 hex: Fault when comparing the switching signals of the two channels (F-DI or DI). bb = 03 hex: Internal fault. bb = 04 hex: Fault when comparing the switching signals of the two channels (Diag-DO). cc: State of the test stop in which the fault has occurred. The display format is as follows: Slave fault state: (test actions)(test actions)   corresponding step for the master: (test actions)(test actions)   Description 00 hex: (L1+OFF)(L2+ON)   0A hex: ( ) ( )   Synchronization / switching step 0A hex: (L1+OFF)(L2+ON)   15 hex: ( ) ( )   Wait step 15 hex: (L1+OFF)(L2+OFF)   20 hex: ( ) ( )   1.) F-DI 0 ... 4 check for 0 V 2.) Switch step to new level 20 hex: (L1+OFF)(L2+OFF)   2B hex: ( ) ( )   Wait step 2B hex: (L1+ON)(L2+ON)   36 hex: ( ) ( )   1.) F-DI 5 ... 9 check for 0 V 2.) Switch step to new level 36 hex: (DO OFF)( )   41 hex: (DO OFF)( )   Wait step / switching step 41 hex: (DO OFF)( )   4C hex: (DO OFF)( )   Wait step 4C hex: (DO ON)( )   57 hex: (DO ON)( )   1.) Check diag-DO or diag-DI 2.) Switch step to new level 57 hex: (DO ON)( )   62 hex: (DO ON)( )   Wait step 62 hex: (DO OFF)( )   6D hex: (DO ON)( )   1.) Check diag-DO or diag-DI 2.) Switch step 6D hex: (DO OFF)( )   78 hex: (DO ON)( )   Wait step 78 hex: (DO ON)( )   83 hex: (DO OFF)( )   1.) Check diag-DO or diag-DI 2.) Switch step 83 hex: (DO ON)( )   8E hex: (DO OFF)( )   Wait step 8E hex: (DO OFF)( )   99 hex: (DO OFF)( )   1.) Check diag-DO or diag-DI 2.) Switch step 99 hex: (DO OFF)( )   A4 hex: (DO OFF)( )   Wait step A4 hex: (DO OFF)( )   AF hex: (DO OFF)( )   Check Diag-DO or Diag-DI AF hex: (DO original state)( )   C5 hex: (DO original state)( )   Switching step

C5 hex: End of test

The expected states to be checked depend on the parameterized test mode (p10047).

The following expected states are tested in the test steps when testing the F-DOs:

The display format is as follows:

Test step (SL MA): Expected Diag-DO mode 1 | Expected DI 20 ... 23 mode 2 | Expected DI 20 ... 23 mode 3

(4C hex 57 hex): Diag-DO = 0 V | DI = 24 V | DI = 24 V

(62 hex 6D hex): Diag-DO = 0 V | DI = 0 V | DI = 0 V

(78 hex 83 hex): Diag-DO = 0 V | DI = 0 V | DI = 24 V

(8E hex 99 hex): Diag-DO = 24 V | DI = 0 V | DI = 24 V

(A4 hex AF hex): Diag-DO = 0 V | DI = 24 V | DI = 24 V

Example:

If an error with fault causes bb = 02 hex or 04 hex occurs in a test stop step, the test action for the fault took place in the previous test stop step. The expected states are tested in the next step.

Master signals fault value 0001\_04AF and slave signals fault value 0001\_04A4.

aaaa = 1 --> F-DO 0 is involved.

bb = 04 hex --> the test of the Diag-DO was unsuccessful.

cc = The expected states were tested in test stop step AF on the master and A4 on the slave.

The expected state Diag-DO = 0 V was checked in the table, i.e. Diag-DO was at 0 V instead of the expected 24 V.

The associated test action took place in the previous step (99 hex DO OFF, A4 hex DO OFF). Both DOs were switched to OFF.

**Remedy:** Check the wiring of the F-DIs and F-DOs and restart the test stop.

Note:

The fault is withdrawn if the test stop is successfully completed.

For fault value = CCCCCCCC hex, DDDDDDDD hex, EEEEEEEE hex the following applies:

These fault values occur together with fault F35152. In this case, all parameters for the test stop should be checked.

You should also check whether the firmware version of the TM54F matches that of the Control Unit.

You also need to check p10001, p10017, p10046 and p10047.

A POWER ON must be carried out after correcting the parameters.

#### A35014 TM54F: Test stop required

**Message value:** -

**Drive object:** B\_INF, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**

- after powering up the drive, a test stop has still not been carried out.
- a new test stop is required after commissioning.
- the time to carry out the forced checking procedure (test stop) has expired (p10003).

**Remedy:** Initiate test stop (BI: p10007).

#### A35015 TM54F: Motor Module replaced or configuration inconsistent

**Message value:** Fault cause: %1 bin

**Drive object:** B\_INF, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** Cyclic communication of at least one drive with the Terminal Module 54F (TM54F) is not active.

Possible causes:

- at least one Motor Module was replaced (e.g. hardware was replaced).
- The parameterization of the TM54F (p10010) is inconsistent with the number of axes, which have drive-based motion monitoring functions activated with TM54F.
- For the signaled axis, it is not permissible that the "Safe motion monitoring without selection" (p9601.5 = 1) is parameterized.
- And activated drive has no communication via DRIVE-CLiQ.
- p10010 of the TM54F master module is not the same as p10010 of the TM54F slave module (in this case, F35051 is also output).
- In p10010 of the TM54F master or slave module, the number of a drive object was entered twice or several times.

Fault value (r0949, interpret binary):

yyyy yyyy xxxx xxxx bin

xxxx xxxx bin: inconsistent configuration

Bit 0 = 1: No communication with drive 1.

...

Bit 5 = 1: No communication with drive 6.

yyyy yyyy bin: Motor Module replaced or a DRIVE-CLiQ cable of a Motor Module not inserted.

Bit 8 = 1: Motor Module from drive 1 was replaced or does not communicate.

...

Bit 13 = 1: Motor Module from drive 6 was replaced or does not communicate.

Note:

When this fault is present, none of the drives listed in the fault value, which have drive-based motion monitoring functions operating with TM54F, are enabled.

For fault value = 0:

The number of drive objects specified in p10010 is not equal to the number of drives that have drive-based motion monitoring functions that have been enabled.

See also: p10010 (SI drive object assignment)

**Remedy:**

For all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).

Check as to whether F35051 is also output and remove the cause.

Check whether each drive object number is listed only once in the indices of p10010.

Note:

If a drive was deactivated and activated without first having established the DRIVE-CLiQ connection, then this alarm is also output.

When replacing a Motor Module, carry out the following steps:

- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).

- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).

- save all parameters (p0977 = 1).

- carry out a POWER ON (power off/on) for all components.

For SINUMERIK, the following applies:

HMI supports the replacement of components with Safety functions (operating area "Diagnostics" --> Softkey "Alarm list" --> Softkey "Confirm SI HW" etc.).

The precise procedure is given in the following document:

SINUMERIK Function Manual Safety Integrated

**A35016**

**TM54F: Net data communication with drive not established**

**Message value:**

-

**Drive object:**

B\_INF, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:**

NONE

**Acknowledge:**

NONE

**Cause:**

The cyclic net data communication within the Terminal Module 54F (TM54F) is still not active.

This message is output after the TM54F master and TM54F slave have booted and is automatically withdrawn as soon as communications have been established.

If a drive does not communicate with the TM54F, then none of the drives parameterized in p10010 are enabled.

**Remedy:**

When replacing a Motor Module, carry out the following steps:

- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).

- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).

- save all parameters (p0977 = 1).

- carry out a POWER ON (power off/on) for all components.

The following always applies:

- for all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).

- check whether fault F35150 is present and if required, remove the cause of the fault.

See also: r10055 (SI TM54F communication status drive-specific)

**F35040**

**TM54F: 24 V undervoltage**

**Message value:**

Fault cause: %1 bin

**Drive object:**

B\_INF, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:**

NONE

**Acknowledge:**

IMMEDIATELY

**Cause:**

For the 24 V power supply for the Terminal Module 54F (TM54F) an undervoltage condition was detected.

As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.

Fault value (r0949, interpret binary):

Bit 0 = 1: Power supply undervoltage at connection X524.

Bit 1 = 1: Power supply undervoltage at connection X514.

**Remedy:**

- check the 24 V DC power supply for the TM54F.

- carry out safe acknowledgement (p10006).

---

**F35043      TM54F: 24 V overvoltage**

**Message value:** -

bb = D7 retraction, SLP  
cc: Index of the data to be cross-compared that resulted in the error.

**Remedy:**

Carry out the following steps on the TM54F:  
- activate the safety commissioning mode (p0010 = 95).  
- start the copy function for SI parameters (p9700 = 57 hex).  
- acknowledge complete data change (p9701 = AC hex).  
- exit the safety commissioning mode (p0010 = 0).  
- save all parameters (p0977 = 1).  
- carry out safe acknowledgement (p10006).  
For an internal software error (aaaa > 0):  
- For TM54F, upgrade the firmware to a later version.  
- contact the Hotline.  
- replace the TM54F.

**F35052 (A)**

<b>Cause:</b>	A communication error between the TM54F master and Control Unit or between the TM54F slave and the Motor Module was detected. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
<b>Remedy:</b>	When replacing a Motor Module, carry out the following steps: - start the copy function for the node identifier on the TM54F (p9700 = 1D hex). - acknowledge the hardware CRC on the TM54F (p9701 = EC hex). - save all parameters (p0977 = 1). - carry out a POWER ON (power off/on) for all components. The following always applies: - check the electrical cabinet design and cable routing for EMC compliance - upgrade the software on the TM54F. - contact the Hotline. - replace the TM54F.
<b>F35151</b>	<b>TM54F: Discrepancy error</b>
<b>Message value:</b>	%1
<b>Drive object:</b>	B_INF, TM54F_MA, TM54F_SL, VECTOR_G
<b>Reaction:</b>	NONE
<b>Acknowledge:</b>	IMMEDIATELY
<b>Cause:</b>	The safety input terminals or output terminals show a different state longer than that parameterized in p10002. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex xxxx: The safety-relevant input terminals F-DI indicate a discrepancy. Bit 0: Discrepancy for F-DI 0 ... Bit 9: Discrepancy for F-DI 9 yyyy: The safety-relevant output terminals F-DO indicate a discrepancy. Bit 0: Discrepancy for F-DO 0 ... Bit 3: Discrepancy for F-DO 3 Note: If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs. The following options are available to analyze all of the discrepancy errors: - Using the commissioning software, evaluate the input states and output states of the TM54F. All discrepancy errors are displayed here. - Compare parameters p10051 and p10052 from the TM54F master and TM54F slave for discrepancy.

**Remedy:** Check the wiring of the corresponding F-DI (contact problems).  
 Discrepancy errors in the fail-safe digital inputs (F-DI) can only be completely acknowledged if, after the cause of the error was resolved, safe acknowledgement was carried out (see p10006). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state internally.  
 For cyclic switching operations at the fail-safe digital inputs (F-DI), it may be necessary to adapt the discrepancy time to the switching frequency:  
 If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.  
 $p10002 < (tp / 2) - td$  (discrepancy time must be less than half the period minus the actual discrepancy time)  
 $p10002 \geq p10000$  (discrepancy time must be no less than p10000)  
 $p10002 > td$  (discrepancy time must be greater than the switch discrepancy time which may actually apply)  
 td: possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p10000).  
 tp: period for a switching operation in ms.  
 For cyclic switching operations and when debounce (p10017) is active, the discrepancy time is directly specified by the debounce time.  
 If the period of a cyclic switching pulse has the order of magnitude of twice the debounce time, then the following formulas should be checked.  
 $p10002 < p10017 + 1ms - td$   
 $p10002 > td$   
 $p10002 \geq p10000$   
 Example:  
 If the SI sampling cycle is 12 ms and the switching frequency is 110 ms (p10017 = 0), the maximum discrepancy time which can be set is as follows:  
 $p10002 \leq 110/2 ms - 12 ms = 43 ms \rightarrow$  rounded-off, the following is obtained  $p10002 \leq 36 ms$   
 Since the discrepancy time can only be accepted as a whole SI sampling time, the value will need to be rounded up or down to a whole SI sampling time value if it is not an exact integer multiple of an SI sampling time.  
 F-DI: Failsafe Digital Input  
 F-DO: Failsafe Digital Output

---

**F35152 TM54F: Internal software error**

**Message value:** %1  
**Drive object:** B\_INF, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** An internal software error has occurred in the Terminal Module 54F (TM54F).  
 The fail-safe digital inputs and digital outputs (F-DI, F-DO) on the TM54F have been set to the safe state.  
 Fault value (r0949, interpret decimal):  
 Only for internal Siemens troubleshooting.  
 Note:  
 F-DI: Failsafe Digital Input  
 F-DO: Failsafe Digital Output  
**Remedy:** Check that the firmware version of the TM54F matches the Control Unit's firmware version.  
 The automatic firmware update must be activated in the project.  
 Note:  
 This signal will also appear, for example, in conjunction with fault F35013. In this case you should check all the parameters for the test stop on the TM54F (p10001, p10003, p10007, p10041, p10046, p10047). In this case, a POWER ON is required after the parameters have been corrected.

**A35212 (F, N) TM: Temperature alarm threshold channel 1 exceeded**

**Message value:** %1  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE

**Cause:** The temperature measured using the temperature sensing of the Terminal Module (TM) (r4105[1]) has exceeded the threshold value to initiate this alarm (p4102[2]).

Note:  
 For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[1] = 1, 4), the following applies:  
 - if r4101[1] > 1650 ohms, the temperature r4105[1] = 250 °C  
 - if r4101[1] <= 1650 ohms, the temperature r4105[1] = -50 °C  
 Alarm value (r2124, interpret decimal):  
 Temperature actual value at the time of initiation [0.1 °C].

**Remedy:**

- allow the temperature sensor to cool down to below p4102[4] - hysteresis (5 K); for TM150, can be set using p4118[1].

**F35220 (N, A)    TM: Frequency limit reached for signal output**

**Message value:** -  
**Drive object:** B\_INF, TM31, VECTOR\_G  
**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Vector: OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The signals output from the Terminal Module 41 (TM41) for tracks A/B have reached the limit frequency. The output signals are no longer in synchronism with the specified setpoint.  
Note:  
If with SIMOTION the TM41 has been configured as the technology project, this fault is also output in response to short-circuited A/B signals in X520.  
**Remedy:** SIMOTION (p4400 = 0) operating mode:  
- enter a lower speed setpoint (p1155).  
- reduce the encoder pulse number (p0408).  
- check track A/B for short-circuits.

SINAMICS (p4400 = 1) operating mode:

- the fine resolution of TM41 in p0418 does not match that of the connector input that was interconnected at P4420
- the encoder position actual value r0479 interconnected at connector input p4420 has an excessively high actual speed

**A35222 (F, N) TM: Encoder pulse number not permissible**

**Message value:** %1  
**Drive object:** B\_INF, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The encoder pulse number entered does not match the permissible pulse number from a hardware perspective.  
 Fault value (r0949, interpret decimal):  
 1: Encoder pulse number is too high.  
 2: Encoder pulse number is too low.  
 4: Encoder pulse number is less than the zero mark offset (p4426).  
**Remedy:** - enter the encoder pulse number in the permissible range (p0408).  
 - if necessary, replace TM41 SAC with TM41 DAC.  
 Note:  
 TM41 SAC: order no. = 6SL3055-0AA00-3PA0  
 TM41 DAC: order no. = 6SL3055-0AA00-3PA1  
 The following applies for TM41 SAC:  
 - minimum/maximum value for p0408: 1000/8192  
 The following applies for TM41 DAC:  
 - minimum/maximum value for p0408: 1000/16384

**F35230      TM: Hardware fault**

**Message value:** %1

**Drive object:** B\_INF, TM150, TM31, VECTOR\_G

**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Vector: NONE

**Acknowledge:** POWER ON

**Cause:** The Terminal Module (TM) used has signaled internal errors.  
Signals from this module may not be evaluated because they are very likely to be incorrect.

**Remedy:** If required, replace the Terminal Module.

---

**F35233      DRIVE-CLiQ component does not support function**

**Message value:** %1

**Drive object:** B\_INF, TM150, TM31, VECTOR\_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A function requested by the Control Unit is not supported by a DRIVE-CLiQ component.  
Fault value (r0949, interpret decimal):  
1: Terminal Module 31 does not support the function "Timer for temperature evaluation" (X522.7/8, p4103 > 0.000).  
4: The improved actual value resolution is not supported (p4401.4).  
5: The improved setpoint resolution is not supported (p4401.5).  
6: The residual value handling in the setpoint channel cannot be deactivated (p4401.6).  
7: Output frequencies greater than 750 kHz cannot be activated (p4401.7).

**Remedy:** For fault value = 1:  
- De-activate timer for temperature evaluation (X522.7/8) (p4103 = 0.000).  
- Use Terminal Module 31 and the relevant firmware version to enable the "Timer for temperature evaluation" function (Order No. 6SL3055-0AA00-3AA1, firmware version 2.6 and higher).  
See also: p4103

---

**F35400 (N, A)      TM: Temperature fault/alarm threshold channel 4 exceeded**

**Message value:** %1

**Drive object:** B\_INF, TM150, VECTOR\_G

**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: OFF2 (NONE, OFF1, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** For the temperature evaluation via the Terminal Module 150 (TM150), at least one of the following conditions to initiate this fault is fulfilled:  
- alarm threshold has been exceeded longer than that set in the timer (p4102[8], p4103[4]).  
or  
- fault threshold exceeded (p4102[9]).

**Note:**  
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[4] = 1, 4), the following applies:  
- if r4101[4] > 1650 ohms, the temperature r4105[4] = 250 °C  
- if r4101[4] ≤ 1650 ohms, the temperature r4105[4] = -50 °C  
The temperature actual value is displayed via connector output r4105[4] and can be interconnected.

**Notice:**  
This fault only causes the drive to shut down if there is at least one BICO interconnection between the drive and the Terminal Module.  
Fault value (r0949, interpret decimal):  
Temperature actual value at the time of initiation [0.1 °C].

**Remedy:** - allow the temperature sensor to cool down to below p4102[9] - hysteresis (p4118[4]).  
- if required, set the fault response to NONE (p2100, p2101).

**Message value:** %1  
**Drive object:** B\_INF, TM150, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The temperature (r4105[6]) measured using the temperature sensing of the Terminal Module 150 (TM150) has exceeded the threshold value to initiate this alarm (p4102[12]).  
**Note:**  
 For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[6] = 1, 4), the following applies:  
 - if r4101[6] > 1650 ohms, the temperature r4105[6] = 250 °C  
 - if r4101[6] <= 1650 ohms, the temperature r4105[6] = -50 °C  
 Alarm value (r2124, interpret decimal):  
 Temperature actual value at the time of initiation [0.1 °C].  
**Remedy:** Allow the temperature sensor to cool down to below p4102[12] - hysteresis (p4118[6]).

**F35820 TM DRIVE-CLiQ: Telegram error**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:** OFF1 (OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the Terminal Module involved.

Fault cause:

1 (= 01 hex):

Checksum error (CRC error).

2 (= 02 hex):

Telegram is shorter than specified in the length byte or in the receive list.

3 (= 03 hex):

Telegram is longer than specified in the length byte or in the receive list.

4 (= 04 hex):

The length of the receive telegram does not match the receive list.

5 (= 05 hex):

The type of the receive telegram does not match the receive list.

6 (= 06 hex):

The address of the component in the telegram and in the receive list do not match.

7 (= 07 hex):

A SYNC telegram is expected - but the received telegram is not a SYNC telegram.

8 (= 08 hex):

No SYNC telegram is expected - but the received telegram is one.

9 (= 09 hex):

The error bit in the receive telegram is set.

16 (= 10 hex):

The receive telegram is too early.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).

- check the electrical cabinet design and cable routing for EMC compliance

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

**F35837      PTM DRIVE-CLiQ: Component fault**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex):  
Error in the telegram header.  
35 (= 23 hex):  
Receive error: The telegram buffer memory contains an error.  
66 (= 42 hex):  
Send error: The telegram buffer memory contains an error.  
67 (= 43 hex):  
Send error: The telegram buffer memory contains an error.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

---

**F35845      TM DRIVE-CLiQ: Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the encoder involved.

Fault cause:  
11 (= 0B hex):  
Synchronization error during alternating cyclic data transfer.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**  
Carry out a POWER ON.  
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

---

**F35850 TM: Internal software error**

**Message value:** %1  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Vector: OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** POWER ON  
**Cause:** An internal software error in the Terminal Module (TM) has occurred.  
Fault value (r0949, interpret decimal):  
1: Background time slice is blocked.  
2: Checksum over the code memory is not OK.

**Remedy:**  
- replace the Terminal Module (TM).  
- if required, upgrade the firmware in the Terminal Module.  
- contact the Hotline.

---

**F35851 TM DRIVE-CLiQ (CU): Sign-of-life missing**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.  
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.  
Fault cause:  
10 (= 0A hex):  
The sign-of-life bit in the receive telegram is not set.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**  
Upgrade the firmware of the component involved.

---

**F35860 TM DRIVE-CLiQ (CU): Telegram error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY

**F35875      TM DRIVE-CLiQ (CU): Supply voltage failed**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.  
Fault cause:  
9 (= 09 hex):  
The power supply voltage for the components has failed.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the power supply for the DRIVE-CLiQ component.

---

**F35885      TM DRIVE-CLiQ (CU): Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.  
The nodes do not send and receive in synchronism.  
Fault cause:  
26 (= 1A hex):  
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.  
33 (= 21 hex):  
The cyclic telegram has not been received.  
34 (= 22 hex):  
Timeout in the telegram receive list.  
64 (= 40 hex):  
Timeout in the telegram send list.  
98 (= 62 hex):  
Error at the transition to cyclic operation.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.

**F35886**

**TM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data**

**Message value:**

Component number: %1, fault cause: %2

**Drive object:**

B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:**

OFF1 (OFF2)

**Acknowledge:**

IMMEDIATELY

**Cause:**

A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.

Data were not able to be sent.

Fault cause:

65 (= 41 hex):

Telegram type does not match send list.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

Carry out a POWER ON.

**F35887**

**TM DRIVE-CLiQ (CU): Component fault**

**Message value:**

Component number: %1, fault cause: %2

**Drive object:**

B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:**

OFF1 (OFF2)

**Acknowledge:**

IMMEDIATELY

**Cause:**

Fault detected on the DRIVE-CLiQ component (Terminal Module) involved. Faulty hardware cannot be excluded.

Fault cause:

32 (= 20 hex):

Error in the telegram header.

35 (= 23 hex):

Receive error: The telegram buffer memory contains an error.

66 (= 42 hex):

Send error: The telegram buffer memory contains an error.

67 (= 43 hex):

Send error: The telegram buffer memory contains an error.

96 (= 60 hex):

Response received too late during runtime measurement.

97 (= 61 hex):

Time taken to exchange characteristic data too long.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

**F35895**

B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G

**Reaction:**

OFF1 (OFF2)

**Acknowledge:**

IMMEDIATELY

**Cause:**

A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.

Fault cause:

11 (= 0B hex):

Synchronization error during alternating cyclic data transfer.

Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:** Carry out a POWER ON.  
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

**F35896 TM DRIVE-CLiQ (CU): Inconsistent component properties**

**Message value:** Component number: %1  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The properties of the DRIVE-CLiQ component (Terminal Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.  
Fault value (r0949, interpret decimal):  
Component number.  
**Remedy:** - carry out a POWER ON.  
- when a component is replaced, the same component type and if possible the same firmware version should be used.  
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

---

**F35899 (N, A) TM: Unknown fault**

**Message value:** New message: %1  
**Drive object:** B\_INF, TM150, TM31, TM54F\_MA, TM54F\_SL, VECTOR\_G  
**Reaction:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** A fault has occurred on the Terminal Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit.  
Fault value (r0949, interpret decimal):  
Fault number.  
Note:  
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.  
**Remedy:** - replace the firmware on the Terminal Module by an older firmware version (r0158).  
- upgrade the firmware on the Control Unit (r0018).

**A35905 (F, N)      TM: Parameter access**

**Message value:** -  
**Drive object:** B\_INF, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The Control Unit attempted to write an illegal parameter value to the Terminal Module.  
**Remedy:** - check whether the firmware version of the Terminal Module (r0158) matches the firmware version of Control Unit (r0018).  
- if required, replace the Terminal Module.  
**Note:**  
The firmware versions that match each other are in the readme.txt file on the memory card.  
**Reaction upon F:** NONE  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

---

**A35906 (F, N)      TM: 24 V power supply missing**

**Message value:** %1  
**Drive object:** B\_INF, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The 24 V power supply for the digital outputs is missing.  
Alarm value (r2124, interpret hexadecimal):  
01: TM17 24 V power supply for DI/DO 0 ... 7 missing.  
02: TM17 24 V power supply for DI/DO 8 ... 15 missing.  
04: TM15 24 V power supply for DI/DO 0 ... 7 (X520) missing.  
08: TM15 24 V power supply for DI/DO 8 ... 15 (X521) missing.  
10: TM15 24 V power supply for DI/DO 16 ... 23 (X522) missing.  
20: TM41 24 V power supply for DI/DO 0 ... 3 missing.  
**Remedy:** Check the terminals for the power supply voltage (L1+, L2+, L3+, M or +24 V\_1 for TM41).  
**Reaction upon F:** NONE  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

---

**A35910 (F, N)    TM: Module overtemperature**

**Message value:** -  
**Drive object:** B\_INF, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The temperature in the module has exceeded the highest permissible limit.  
**Remedy:** - reduce the ambient temperature.  
              - replace the Terminal Module.  
  
**Reaction upon F:** NONE  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

---

**A35911 (F, N)    TM: Clock synchronous operation sign-of-life missing**

**Message value:** -  
**Drive object:** B\_INF, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The maximum permissible number of errors in the master sign-of-life (clock synchronous operation) has been exceeded in cyclic operation.  
              When the alarm is output, the module outputs are reset up to the next synchronization.  
**Remedy:** - check the physical bus configuration (terminating resistor, shielding, etc.).  
              - check the interconnection of the master sign-of-life (r4201 via p0915).  
              - check whether the master correctly sends the sign-of-life (e.g. set up a trace with r4201.12 ... r4201.15 and trigger signal r4301.9).  
              - check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short).

**F36887 Hub DRIVE-CLiQ (CU): Component fault**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, HUB, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module) involved. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex):  
Error in the telegram header.  
35 (= 23 hex):  
Receive error: The telegram buffer memory contains an error.  
66 (= 42 hex):  
Send error: The telegram buffer memory contains an error.  
67 (= 43 hex):  
Send error: The telegram buffer memory contains an error.  
96 (= 60 hex):  
Response received too late during runtime measurement.  
97 (= 61 hex):  
Time taken to exchange characteristic data too long.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).  
- check the electrical cabinet design and cable routing for EMC compliance  
- if required, use another DRIVE-CLiQ socket (p9904).  
- replace the component involved.

---

**F36895 Hub DRIVE-CLiQ (CU): Alternating cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B\_INF, HUB, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.  
Fault cause:  
11 (= 0B hex):  
Synchronization error during alternating cyclic data transfer.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
Carry out a POWER ON.  
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

**F36896 Hub DRIVE-CLiQ (CU): Inconsistent component properties**

**Message value:** Component number: %1  
**Drive object:** B\_INF, HUB, TM150, TM31, VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The properties of the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.  
Fault value (r0949, interpret decimal):  
Component number.  
**Remedy:**  
- carry out a POWER ON.  
- when a component is replaced, the same component type and if possible the same firmware version should be used.  
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

---

9 (= 09 hex):  
The error bit in the receive telegram is set.  
16 (= 10 hex):  
The receive telegram is too early.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

---

**F40825 CX32 DRIVE-CLiQ: Supply voltage failed**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.  
 Fault cause:  
 9 (= 09 hex):  
 The power supply voltage for the components has failed.  
 Note regarding the message value:  
 The individual information is coded as follows in the message value (r0949/r2124):  
 0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the supply voltage wiring of the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the DRIVE-CLiQ component power supply.

---

**F40835 CX32 DRIVE-CLiQ: Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved. The nodes do not send and receive in synchronism.  
 Fault cause:  
 33 (= 21 hex):  
 The cyclic telegram has not been received.  
 34 (= 22 hex):  
 Timeout in the telegram receive list.  
 64 (= 40 hex):  
 Timeout in the telegram send list.  
 Note regarding the message value:  
 The individual information is coded as follows in the message value (r0949/r2124):  
 0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- replace the component involved.

See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

---

**F40836 CX32 DRIVE-CLiQ: Send error for DRIVE-CLiQ data**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved. Data were not able to be sent.

Fault cause:  
65 (= 41 hex):  
Telegram type does not match send list.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON (power off/on).

---

**F40837 CX32 DRIVE-CLiQ: Component fault**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex):  
Error in the telegram header.  
35 (= 23 hex):  
Receive error: The telegram buffer memory contains an error.  
66 (= 42 hex):  
Send error: The telegram buffer memory contains an error.  
67 (= 43 hex):  
Send error: The telegram buffer memory contains an error.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).  
- check the electrical cabinet design and cable routing for EMC compliance  
- if required, use another DRIVE-CLiQ socket (p9904).  
- replace the component involved.

---

**F40845 CX32 DRIVE-CLiQ: Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved.  
Fault cause:  
11 (= 0B hex):  
Synchronization error during alternating cyclic data transfer.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
Carry out a POWER ON (power off/on).  
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

---

**F40851 CX32 DRIVE-CLiQ (CU): Sign-of-life missing**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.  
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.  
Fault cause:  
10 (= 0A hex):  
The sign-of-life bit in the receive telegram is not set.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:** Upgrade the firmware of the component involved.

---

**F40860 CX32 DRIVE-CLiQ (CU): Telegram error**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** All objects

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.

Fault cause:

1 (= 01 hex):

Checksum error (CRC error).

2 (= 02 hex):

Telegram is shorter than specified in the length byte or in the receive list.

3 (= 03 hex):

Telegram is longer than specified in the length byte or in the receive list.

4 (= 04 hex):

The length of the receive telegram does not match the receive list.

5 (= 05 hex):

The type of the receive telegram does not match the receive list.

6 (= 06 hex):

The address of the power unit in the telegram and in the receive list do not match.

9 (= 09 hex):

The error bit in the receive telegram is set.

16 (= 10 hex):

The receive telegram is too early.

17 (= 11 hex):

CRC error and the receive telegram is too early.

18 (= 12 hex):

The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.

19 (= 13 hex):

The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.

20 (= 14 hex):

The length of the receive telegram does not match the receive list and the receive telegram is too early.

21 (= 15 hex):

The type of the receive telegram does not match the receive list and the receive telegram is too early.

22 (= 16 hex):

The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.

25 (= 19 hex):

The error bit in the receive telegram is set and the receive telegram is too early.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

**F40875 CX32 DRIVE-CLiQ (CU): Supply voltage failed**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** All objects

**Reaction:** OFF1 (OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:** The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.

Fault cause:

9 (= 09 hex):

The power supply voltage for the components has failed.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- carry out a POWER ON (power off/on).
- check the supply voltage wiring of the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the DRIVE-CLiQ component power supply.

---

**F40885 CX32 DRIVE-CLiQ (CU): Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.  
The nodes do not send and receive in synchronism.  
Fault cause:  
26 (= 1A hex):  
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.  
33 (= 21 hex):  
The cyclic telegram has not been received.  
34 (= 22 hex):  
Timeout in the telegram receive list.  
64 (= 40 hex):  
Timeout in the telegram send list.  
98 (= 62 hex):  
Error at the transition to cyclic operation.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**

- check the power supply voltage of the component involved.
- carry out a POWER ON (power off/on).
- replace the component involved.

See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

**F40886 CX32 DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.  
Data were not able to be sent.  
Fault cause:  
65 (= 41 hex):  
Telegram type does not match send list.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON (power off/on).

---

**F40887 CX32 DRIVE-CLiQ (CU): Component fault**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex):  
Error in the telegram header.  
35 (= 23 hex):  
Receive error: The telegram buffer memory contains an error.  
66 (= 42 hex):  
Send error: The telegram buffer memory contains an error.  
67 (= 43 hex):  
Send error: The telegram buffer memory contains an error.

96 (= 60 hex):  
Response received too late during runtime measurement.  
97 (= 61 hex):  
Time taken to exchange characteristic data too long.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

---

**F40895 CX32 DRIVE-CLiQ (CU): Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.  
 Fault cause:  
 11 (= 0B hex):  
 Synchronization error during alternating cyclic data transfer.  
 Note regarding the message value:  
 The individual information is coded as follows in the message value (r0949/r2124):  
 0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON (power off/on).  
 See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

---

**F49150 Cooling unit: Fault occurred**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The cooling unit signals a general fault.  
**Remedy:**

- check the wiring between the cooling unit and the input terminal (Terminal Module).
- check the external control device for the cooling unit.

See also: p0266 (Cooling unit, feedback signals, signal source)

---

**F49151 Cooling unit: Conductivity has exceeded the fault threshold**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The conductivity of the cooling liquid has exceeded the selected fault threshold (p0269[2]).  
 See also: p0261 (Cooling unit, starting time 2), p0262 (Cooling unit, fault conductivity delay time), p0266 (Cooling unit, feedback signals, signal source)  
**Remedy:** Check the device to de-ionize the cooling liquid.

---

**F49152 Cooling unit: ON command feedback signal missing**

**Message value:** -  
**Drive object:** B\_INF, VECTOR\_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The feedback signal of the ON command of the cooling unit is missing.  
 - after the ON command, the feedback signal has not been received within the selected starting time (p0260).  
 - the feedback signal has failed in operation.  
 See also: p0260 (Cooling unit, starting time 1), r0267 (Cooling unit status word)  
**Remedy:**

- check the wiring between the cooling unit and the input terminal (Terminal Module).
- check the external control device for the cooling unit.

---

<b>F49153</b>	<b>Cooling unit: Liquid flow too low</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The drive converter cooling unit signals that the cooling liquid flow is too low. - after the ON command, the feedback signal has not been received within the selected starting time (p0260). - in operation, the feedback signal has failed for longer than the permitted failure time (p0263). See also: p0260 (Cooling unit, starting time 1), p0263 (Cooling unit fault liquid flow, delay time), r0267 (Cooling unit status word)
Remedy:	- check the wiring between the cooling unit and the input terminal (Terminal Module). - check the external control device for the cooling unit.

---

<b>F49154 (A)</b>	<b>Cooling unit: Liquid leak is present</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The liquid leakage monitoring function has responded. Caution: If this fault is re-parameterized as an alarm then using other monitoring functions it must be ensured that when cooling water is lost, the drive is powered down! See also: r0267 (Cooling unit status word)
Remedy:	- check the cooling system for leaks in the cooling circuit. - check the wiring of the input terminal (Terminal Module) used to monitor leaking fluid.
Reaction upon A:	NONE
Acknowled. upon A:	NONE

---

<b>F49155</b>	<b>Cooling unit: Power Stack Adapter, firmware version too old</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	The firmware version in the Power Stack Adapter (PSA) is too old and does not support the liquid cooling.
Remedy:	Upgrade the firmware. Check EEPROM data.

---

<b>F49156</b>	<b>Cooling unit: Cooling liquid temperature has exceeded the fault threshold</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The cooling liquid intake temperature has exceeded the permanently set fault threshold.
Remedy:	Check the cooling system and the ambient conditions.

---

<b>A49170</b>	<b>Cooling unit: Alarm has occurred</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	The cooling unit signals a general alarm.
Remedy:	- check the wiring between the cooling unit and the input terminal (Terminal Module). - check the external control device for the cooling unit.

---

<b>A49171</b>	<b>Cooling unit: Conductivity has exceeded the alarm threshold</b>
Message value:	-
Drive object:	B_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The conductivity of the cooling liquid has exceeded the selected alarm threshold (p0269[1]). The threshold cannot be set higher than the fault threshold specified in the equipment description.
Remedy:	Check the device to de-ionize the cooling liquid.
<b>A49171</b>	<b>Cooling unit: Conductivity has exceeded the alarm threshold</b>
Message value:	-
Drive object:	VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	Conductivity monitoring is set for the cooling liquid (r0267.7, from p0266[7]). See also: p0261 (Cooling unit, starting time 2), p0262 (Cooling unit, fault conductivity delay time), p0266 (Cooling unit, feedback signals, signal source), r0267 (Cooling unit status word)
Remedy:	Check the device to de-ionize the cooling liquid.
<b>A49172</b>	<b>Cooling unit: Conductivity actual value is not valid</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	When monitoring the conductivity of the cooling liquid, there is a fault in the wiring or in the sensor.
Remedy:	- check the wiring between the cooling unit and the Power Stack Adapter (PSA). - check the function of the sensor to measure the conductivity.
<b>A49173</b>	<b>Cooling unit: Cooling liquid temperature has exceeded the alarm threshold</b>
Message value:	-
Drive object:	B_INF, VECTOR_G
Reaction:	NONE
Acknowledge:	NONE
Cause:	The cooling liquid intake temperature has exceeded the specified alarm threshold.
Remedy:	Check the cooling system and the ambient conditions.
<b>F49200</b>	<b>Excitation group signal fault</b>
Message value:	%1
Drive object:	VECTOR_G
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The excitation sequence control signals a fault. Fault value (r0949, interpret hexadecimal): Bit 0: When powered down or when powering down the excitation, the signal "excitation ready feedback signal" was not received within the monitoring time. Bit 1: After an ON command, the signal "excitation ready feedback signal" was not received within the monitoring time. Bit 2: After the pulses were enabled, the signal "excitation operational feedback signal" was not received within the monitoring time. Bit 3: The "excitation group signal fault" signal is present.
Remedy:	- check the excitation. - check commands, feedback signals and BICO interconnections.

---

**A49201 (F)      Excitation group signal alarm**

**Message value:** -  
**Drive object:** VECTOR\_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The "excitation group signal alarm" signal is present.  
**Remedy:** Check the excitation equipment.  
**Reaction upon F:** NONE  
**Acknowl. upon F:** IMMEDIATELY

---

**A50001 (F)      COMM BOARD: Alarm 1**

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** CBE20:  
A PROFINET controller attempts to establish a connection using an incorrect configuring telegram. The "Shared Device" function has been activated (p8829 = 2).  
Alarm value (r2124, interpret decimal):  
10: A CPU sends a PROFIsafe telegram.  
11: F CPU sends a PZD telegram.  
12: F CPU without an A CPU.  
13: F CPU with more PROFIsafe subslots than activated with p9601.3.  
14: F CPU with fewer PROFIsafe subslots than activated with p9601.3.  
15: PROFIsafe telegram of the F-CPU does not match the setting in p60022.  
See also: p8829 (CBE20 remote controller number), p9601 (SI enable, functions integrated in the drive (Control Unit))  
**Remedy:** CBE20:  
Check the configuration of the PROFINET controllers as well as the p8829 and p9601.3 setting.  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Acknowl. upon F:** IMMEDIATELY

# List of abbreviations

# B

---

## Note:

The following list of abbreviations includes all abbreviations and their meanings used in the entire SINAMICS family of drives.

---

Abbreviation	Source of abbreviation	Meaning
<b>A</b>		
A...	Alarm	Alarm
AC	Alternating Current	Alternating current
ADC	Analog Digital Converter	Analog-digital converter
AI	Analog Input	Analog input
AIM	Active Interface Module	Active Interface Module
ALM	Active Line Module	Active Line Module
AO	Analog Output	Analog output
AOP	Advanced Operator Panel	Advanced Operator Panel
APC	Advanced Positioning Control	Advanced Positioning Control
AR	Automatic Restart	Automatic restart
ASC	Armature Short-Circuit	Armature short-circuit
ASCII	American Standard Code for Information Interchange	American Standard Code for Information Interchange
ASM	Asynchronmotor	Induction motor
<b>B</b>		
BB	Betriebsbedingung	Operating condition
BERO	-	Contact-free proximity switch
BI	Binector Input	Binector input
BIA	Berufsgenossenschaftliches Institut für Arbeitssicherheit	Germany's Institute for Occupational Safety and Health
BICO	Binector Connector Technology	Binector connector technology
BLM	Basic Line Module	Basic Line Module
BO	Binector Output	Binector output
BOP	Basic Operator Panel	Basic Operator Panel
<b>C</b>		
C	Capacitance	Capacitance
C...	-	Safety message
CAN	Controller Area Network	Serial bus system

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
CBC	Communication Board CAN	Communication Board CAN
CD	Compact Disk	Compact disk
CDS	Command Data Set	Command data set
CF Card	CompactFlash Card	CompactFlash memory card
CI	Connector Input	Connector input
CLC	Clearance Control	Clearance control
CNC	Computer Numerical Control	Computerized numerical control
CO	Connector Output	Connector output
CO/BO	Connector Output/Binector Output	Connector output/binector output
COB ID	CAN Object Identification	CAN object identification
COM	Common contact of a changeover relay	Center contact on a changeover contact
COMM	Commissioning	Commissioning
CP	Communications Processor	Communication processor
CPU	Central Processing Unit	Central processing unit
CRC	Cyclic Redundancy Check	Cyclic redundancy check
CSM	Control Supply Module	Control Supply Module
CU	Control Unit	Control Unit
CUA	Control Unit Adapter	Control Unit Adapter
CUD	Control Unit DC MASTER	Control Unit DC MASTER
<b>D</b>		
DAC	Digital Analog Converter	D-A converter
DC	Direct Current	Direct current
DCB	Drive Control Block	Drive Control Block
DCBRK	DC Brake	DC braking
DCC	Drive Control Chart	Drive Control Chart
DCN	Direct Current Negative	Direct current negative
DCP	Direct Current Positive	Direct current positive
DDS	Drive Data Set	Drive data set
DI	Digital Input	Digital input
DI/DO	Digital Input/Digital Output	Digital input/digital output, bidirectional
DMC	DRIVE-CLiQ Hub Module Cabinet	DRIVE-CLiQ Hub Module Cabinet
DME	DRIVE-CLiQ Hub Module External	DRIVE-CLiQ Hub Module External
DO	Digital Output	Digital output
DO	Drive Object	Drive object
DP	Decentralized Peripherals	Distributed I/Os
DPRAM	Dual-Port Random Access Memory	Memory with dual access
DRAM	Dynamic Random Access Memory	Dynamic memory
DRIVE-CLiQ	DRIVE Component Link with IQ	DRIVE Component Link with IQ
DSC	Dynamic Servo Control	Dynamic Servo Control
DTC	Digital Time Clock	Time switch

Abbreviation	Source of abbreviation	Meaning
<b>E</b>		
EASC	External Armature Short-Circuit	External armature short-circuit
EDS	Encoder Data Set	Encoder data set
EGB	Elektrostatisch gefährdete Baugruppen	Electrostatic Sensitive Devices (ESD)
ELCB	Earth Leakage Circuit Breaker	Residual current operated circuit breaker
ELP	Earth Leakage Protection	Ground-fault monitoring
EMC	Electromagnetic Compatibility	Electromagnetic compatibility
EMF	Electromagnetic Force	Electromagnetic force
EMK	Elektromagnetische Kraft	Electromagnetic force
EMV	Elektromagnetische Verträglichkeit	Electromagnetic compatibility (EMC)
EN	Europäische Norm	European standard
EnDat	Encoder Data Interface	Encoder interface
EP	Enable Pulses	Pulse enable
EPOS	Einfachpositionierer	Basic positioner
ES	Engineering System	Engineering system
ESB	Ersatzschaltbild	Equivalent circuit diagram
ESD	Electrostatic Sensitive Devices	Electrostatic sensitive devices
ESR	Extended Stop and Retract	Extended stop and retract
<b>F</b>		
F...	Fault	Fault
FAQ	Frequently Asked Questions	Frequently asked questions
FBL	Free Blocks	Free function blocks
FCC	Function Control Chart	Function Control Chart
FCC	Flux Current Control	Flux current control
FD	Function Diagram	Function diagram
F-DI	Fail-safe Digital Input	Fail-safe digital input
F-DO	Fail-safe Digital Output	Fail-safe digital output
FEM	Fremderregter Synchronmotor	Separately excited synchronous motor
FEPROM	Flash EPROM	Non-volatile read/write memory
FG	Function Generator	Function generator
FI	-	Fault current
FOC	Fiber-Optic Cable	Fiber-optic cable
FP	Funktionsplan	Function diagram
FPGA	Field Programmable Gate Array	Field Programmable Gate Array
FW	Firmware	Firmware
<b>G</b>		
GB	Gigabyte	Gigabyte
GC	Global Control	Global Control Telegram (broadcast telegram)
GND	Ground	Reference potential for all signal and operating voltages, usually defined as 0 V (also referred to as G)

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
GSD	Gerätestammdatei	Generic Station Description: Describes the characteristics of a PROFIBUS slave
GSV	Gate Supply Voltage	Gate supply voltage
GUID	Globally Unique Identifier	Globally unique identifier
<b>H</b>		
HF	High Frequency	High frequency
HFD	Hochfrequenzdrossel	High-frequency reactor
HLG	Hochlaufgeber	Ramp-function generator
HMI	Human Machine Interface	Human Machine Interface
HTL	High-Threshold Logic	Logic with a high fault threshold
HW	Hardware	Hardware
<b>I</b>		
i. V.	In Vorbereitung	Under development: This feature is not currently available
I/O	Input/Output	Input/output
I2C	Inter-Integrated Circuit	Internal serial data bus
IASC	Internal Armature Short-Circuit	Internal armature short-circuit
IBN	Inbetriebnahme	Commissioning
ID	Identifier	Identification
IE	Industrial Ethernet	Industrial Ethernet
IEC	International Electrotechnical Commission	International Electrotechnical Commission
IF	Interface	Interface
IGBT	Insulated Gate Bipolar Transistor	Insulated gate bipolar transistor
IGCT	Integrated Gate-Controlled Thyristor	Semiconductor circuit breaker with integrated control electrode
IL	Impulslöschung	Pulse suppression
IP	Internet Protocol	Internet Protocol
IPO	Interpolator	Interpolator
IT	Isolé Terré	Non-grounded three-phase power supply
IVP	Internal Voltage Protection	Internal voltage protection
<b>J</b>		
JOG	Jogging	Jogging
<b>K</b>		
KDV	Kreuzweiser Datenvergleich	Crosswise data comparison
KHP	Know-how protection	Know-how protection
KIP	Kinetische Pufferung	Kinetic buffering
Kp	-	Proportional gain
KTY	-	Special temperature sensor
<b>L</b>		
L	-	Formula symbol for inductance
LED	Light Emitting Diode	Light emitting diode
LIN	Linearmotor	Linear motor

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
LR	Lageregler	Position controller
LSB	Least Significant Bit	Least significant bit
LSC	Line-Side Converter	Line-side converter
LSS	Line-Side Switch	Line-side switch
LU	Length Unit	Length unit
LWL	Lichtwellenleiter	Fiber-optic cable
<b>M</b>		
M	-	Formula symbol for torque
M	Masse	Reference potential for all signal and operating voltages, usually defined as 0 V (also referred to as GND)
MB	Megabyte	Megabyte
MCC	Motion Control Chart	Motion Control Chart
MDI	Manual Data Input	Manual data input
MDS	Motor Data Set	Motor data set
MLFB	Maschinenlesbare Fabrikatebezeichnung	Machine-readable product code
MMC	Man-Machine Communication	Man-machine communication
MMC	Micro Memory Card	Micro memory card
MSB	Most Significant Bit	Most significant bit
MSC	Motor-Side Converter	Motor-side converter
MSCY_C1	Master Slave Cycle Class 1	Cyclic communication between master (Class 1) and slave
MSR	Motorstromrichter	Motor-side converter
MT	Messtaster	Probe
<b>N</b>		
N. C.	Not Connected	Not connected
N...	No Report	No message or internal message
NAMUR	Normenarbeitsgemeinschaft für Mess- und Regeltechnik in der chemischen Industrie	Standardization association for measurement and control in chemical industries
NC	Normally Closed (contact)	NC contact
NC	Numerical Control	Numerical control
NEMA	National Electrical Manufacturers Association	Standardization body in the USA (United States of America)
NM	Nullmarke	Zero mark
NO	Normally Open (contact)	NO contact
NSR	Netzstromrichter	Line-side converter
NVRAM	Non-Volatile Random Access Memory	Non-volatile read/write memory
<b>O</b>		
OA	Open Architecture	Open Architecture
OC	Operating Condition	Operating condition
OEM	Original Equipment Manufacturer	Original equipment manufacturer
OLP	Optical Link Plug	Fiber-optic bus connector

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
OMI	Option Module Interface	Option module interface
<b>P</b>		
p...	-	Adjustable parameter
P1	Processor 1	Processor 1
P2	Processor 2	Processor 2
PB	PROFIBUS	PROFIBUS
PcCtrl	PC Control	Control for master
PD	PROFIdrive	PROFIdrive
PDS	Power Unit Data Set	Power unit data set
PE	Protective Earth	Protective earth (ground)
PELV	Protective Extra Low Voltage	Protective extra low voltage
PEM	Permanenterregter Synchronmotor	Permanent-magnet synchronous motor
PG	Programmiergerät	Programming device
PI	Proportional Integral	Proportional integral
PID	Proportional Integral Differential	Proportional integral differential
PLC	Programmable Logic Controller	Programmable logic controller
PLL	Phase-Locked Loop	Phase-locked loop
PN	PROFINET	PROFINET
PNO	PROFIBUS Nutzerorganisation	PROFIBUS user organization
PPI	Point-to-Point Interface	Point-to-point interface
PRBS	Pseudo Random Binary Signal	White noise
PROFIBUS	Process Field Bus	Serial data bus
PS	Power Supply	Power supply
PSA	Power Stack Adapter	Power Stack Adapter
PTC	Positive Temperature Coefficient	Positive temperature coefficient
PTP	Point-To-Point	Point-to-point
PWM	Pulse Width Modulation	Pulse width modulation
PZD	Prozessdaten	Process data
<b>Q</b>		
<b>R</b>		
r...	-	Display parameter (read-only)
RAM	Random Access Memory	Read/write memory
RCCB	Residual Current Circuit Breaker	Residual current operated circuit breaker
RCD	Residual Current Device	Residual current operated circuit breaker
RCM	Residual Current Monitor	Residual current monitor
RFG	Ramp-Function Generator	Ramp-function generator
RJ45	Registered Jack 45	Term for an 8-pin socket system for data transmission with shielded or non-shielded multi-wire copper cables
RKA	Rückkühlanlage	Cooling unit
RO	Read Only	Read only
RPDO	Receive Process Data Object	Receive process data object

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
RS232	Recommended Standard 232	Interface standard for cable-connected serial data transmission between a sender and receiver (also known as EIA232)
RS485	Recommended Standard 485	Interface standard for a cable-connected differential, parallel, and/or serial bus system (data transmission between a number of senders and receivers, also known as EIA485)
RTC	Real Time Clock	Real-time clock
RZA	Raumzeigerapproximation	Space vector approximation
<b>S</b>		
S1	-	Continuous operation
S3	-	Intermittent operation
SAM	Safe Acceleration Monitor	Safe acceleration monitoring
SBC	Safe Brake Control	Safe brake control
SBH	Sicherer Betriebshalt	Safe operating stop
SBR	Safe Brake Ramp	Safe brake ramp monitoring
SCA	Safe Cam	Safe cam
SD Card	Secure Digital Card	Secure digital memory card
SDI	Safe Direction	Safe motion direction
SE	Sicherer Software-Endschalter	Safe software limit switch
SG	Sicher reduzierte Geschwindigkeit	Safely reduced speed
SGA	Sicherheitsgerichteter Ausgang	Safety-related output
SGE	Sicherheitsgerichteter Eingang	Safety-related input
SH	Sicherer Halt	Safe standstill
SI	Safety Integrated	Safety Integrated
SIL	Safety Integrity Level	Safety Integrity Level
SLM	Smart Line Module	Smart Line Module
SLP	Safely-Limited Position	Safely-limited position
SLS	Safely-Limited Speed	Safely-limited speed
SLVC	Sensorless Vector Control	Vector control without encoder (sensorless)
SM	Sensor Module	Sensor Module
SMC	Sensor Module Cabinet	Sensor Module Cabinet
SME	Sensor Module External	Sensor Module External
SMI	SINAMICS Sensor Module Integrated	SINAMICS Sensor Module Integrated
SN	Sicherer Software-Nocken	Safe software cam
SOS	Safe Operating Stop	Safe operating stop
SP	Service Pack	Service pack
SPC	Setpoint Channel	Setpoint channel
SPI	Serial Peripheral Interface	Serial interface for connecting peripherals
SPS	Speicherprogrammierbare Steuerung	Programmable logic controller

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
SS1	Safe Stop 1	Safe stop 1 (monitored for time and ramping up)
SS2	Safe Stop 2	Safe stop 2
SSI	Synchronous Serial Interface	Synchronous serial interface
SSM	Safe Speed Monitor	Safe feedback from speed monitor
SSP	SINAMICS Support Package	SINAMICS support package
STO	Safe Torque Off	Safe torque off
STW	Steuerwort	Control word
<b>T</b>		
TB	Terminal Board	Terminal Board
TIA	Totally Integrated Automation	Totally Integrated Automation
TM	Terminal Module	Terminal Module
TN	Terre Neutre	Grounded three-phase power supply
Tn	-	Integral time
TPDO	Transmit Process Data Object	Transmit process data object
TT	Terre Terre	Grounded three-phase power supply
TTL	Transistor-Transistor Logic	Transistor-transistor logic
Tv	-	Rate time
<b>U</b>		
UL	Underwriters Laboratories Inc.	Underwriters Laboratories Inc.
UPS	Uninterruptible Power Supply	Uninterruptible power supply
USV	Unterbrechungsfreie Stromversorgung	Uninterruptible power supply
UTC	Universal Time Coordinated	Universal time coordinated
<b>V</b>		
VC	Vector Control	Vector control
Vdc	-	DC link voltage
VdcN	-	Partial DC link voltage, negative
VdcP	-	Partial DC link voltage, positive
VDE	Verband Deutscher Elektrotechniker	Association of German Electrical Engineers
VDI	Verein Deutscher Ingenieure	Association of German Engineers
VPM	Voltage Protection Module	Voltage Protection Module
Vpp	Volt peak to peak	Volt peak to peak
VSM	Voltage Sensing Module	Voltage Sensing Module
<b>W</b>		
WEA	Wiedereinschaltautomatik	Automatic restart
WZM	Werkzeugmaschine	Machine tool
<b>X</b>		
XML	Extensible Markup Language	Standard language for Web publishing and document management

<b>Abbreviation</b>	<b>Source of abbreviation</b>	<b>Meaning</b>
<b>Y</b>		
<b>Z</b>		
ZK	Zwischenkreis	DC link
ZM	Zero Mark	Zero mark
ZSW	Zustandswort	Status word
